

To : whom to be concerned

For the proposed amendment of Harmful Substances in Food Regulations (Cap. 132AF) on 2020 Dec 11 per below

https://www.cfs.gov.hk/tc_chi/whatsnew/whatsnew_fstr/files/HS_Consultation_Document_c.pdf

there are no test methods for each new harmful substances.

The list of “partial hydrogenated oil (PHO)” are also not so clear. It is likely to analyse the fatty acid profile of different edible oil rather than the common trans-fat.

Thanks and Best Regards
