Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 香港電力市場第二階段諮詢

☐ Urgent ☐ Return Receipt

30/03/2006 18:10

敬啟者：

香港電力市場第二階段諮詢

經歷過六七十年代時經常冇水冇電的時期，當時年幼還不覺什麼；但在今時今日繁忙的香港社會，冇電的情景絕不容許。以下數點是本人就上述諮詢文件作出的提議，以供參考：

看畢整份文件，總覺得此諮詢文件在環保問題上未能平衡各方所需。政府一方面要求電力公司減少排放污染物，將環保標準及罰則提高，與利潤掛勾，另方面又降低此類設備或裝置之回報率由大約 13% 減至 7%。有著雙重標準。大大扼殺電力公司在環保設備上資金的投放及此類公司的生存空間。是否政府已有準備或相當把握第三間或更多的電力發展商可以隨時投資或接辦現有的電力公司或市場呢？再者，罰則越重，後果有可能另電費更高、空氣污染更差。到最後受苦的可能只是我們一般的香港小市民。

電力有別於電訊，不能在空氣中傳送。要達至安全、隱定、可靠地輸送電力至港九、新界各地，全賴電力公司（或電力市場投資者）對市場的信心及正確地投放資金。要知道投放在地區上的發電及輸電設備，牽涉龐大資金及時間，又不能一下子地移離或棄掉。此等資產的貶值年期被定性為二十至三十五年，已經相當嚴苛，而政府又要將協議營運年期由十五年減至十年（雖然有條件地可伸延至十五年），但已大大削弱該等企業在融資方面的能力及影響投資者信心，又怎能推動電力市場發展、從而改善現存的市場呢？總覺得政府在這方面對電力營運投資者有所不公。回顧電訊市場開放後，市民是否真正得益？除相互通訊比以前方便快捷外，但一般市民每月付出的相關費用比以往高達五倍有多。所以開放市場未必確保消費者有所得益，反會另政府難以監控市場運作及電價。

！

以往，電力市場監管協議（SCA）建築於政府與電力市場投資者信心上的相互誠諾。政府要電力投放者有隱定及足夠的電力滿足地區所需，從而另外國投資者有信心在香港投資、建基及發展。因協議內的回報吸引，電力投資者亦有信心投放資源，有能力在市場上籌集資金，用於地區內建設有效、可靠、隱定的電力網絡，對每一用戶作出相應誠諾。因地區發展環境改變因素，此等協議已變成互相指責及攻擊對方不是的工具。在互惠互利的大前題下，首要清楚明白此協議有別於專營權。協議存在與否，其他電力投資者亦可加入競爭。協議存在，政府可有效地監管營運者資金的投放及電價計算。相反，當相方就 SCA 未能作出共適，回復四十年前的供電營運模式，無論在電價、環保、電力設備、投資者信心、用戶及地區未來發展方向，都有著無可估計的傷害。其實兩電大可拒絕在零八年簽定 SCA。當現存的協議期滿後，依足環

保準則下發電及供電，依照市場電力需求而釐定價格，關閉一些未能合附經濟原則的地區電力設施，又或抬高該等地區的電價，以確保所需利潤。到時，我們是不是可以不用電呢？是不是要東方之珠香港國際機場後再一次因基建問題成為國際笑柄？無可否認，電價要一般市民生活水平之內。但背後亦要就電力供應質數作出相應評估及回報。只因順應一群盲目在每項議題上上街抗爭的，爭取些微減電價，放棄控制權而開放電力市場是極度不明智的。

總括而言，本人建議：

- (一) 將投資回報率（固定資產）均定為 10 至 11 % 較為合理。
- (二) 協議年期由現時十五年伸延至二十年，使投資者有較長遠計劃及融資能力。縮窄資產貶值期與規管年期不公平之差距。
- (三) 政府應盡量掌握市場控制及監管，從而確保香港這金融城市不會因開放電力市場而受不必要停電風險。

謝謝

3 March 2006

Economic Development and Labour Bureau,
Government of the Hong Kong Special Administrative Region,
2/F Central Government Offices,
Main & East Wings,
Lower Albert Road,
Central, Hong Kong

Dear Sir,

Views on the Government's Consultation Paper on the Future Development of the Electricity Market in Hong Kong – Stage II Consultation

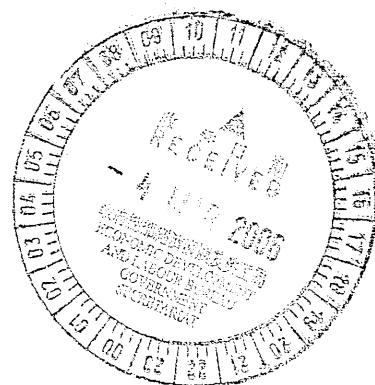

I am a resident on the Kowloon side and I have the following views on the Government's Consultation Paper on the Future Development of the Electricity Market in Hong Kong – Stage II Consultation:

1. I **agree** with the continuation of the Scheme of Control regime as CLP Power Hong Kong Limited has been long providing reliable electricity supply at a reasonable price with satisfactory customer services.
2. I **agree** with the calculation of permitted return by average net fixed asset as this will encourage on-going investments on improvements (particularly environmental improvements) to the electricity system.
3. I **disagree** with the proposal on the reduction of the permitted return as this will certainly discourage investments on continual improvements to the electricity system and subsequently jeopardize the reliability of electricity supply in which a dynamic and economic driven city like Hong Kong can not possibly afford.
4. I **disagree** with the proposal on the reduction of the duration of the Scheme of Control regime as this fails to recognize the inherently long-term business nature of the electricity industry where asset lives of the of the electricity system equipment are in the order of 30 years or more.
5. I **disagree** with the proposal on the implementation of environmental performance disincentives as the required environmental improvement investments will be disincentivized by a lower proposed rate of return which is an absolute contradiction with the original objective of emission reduction. The Government is in fact being ironically illogical on this proposition.

Yours faithfully,

D Cheung

Subject: Future Development of Electricity Market in Hong Kong – Stage II
Government Consultation

☐ Urgent ☐ Return Receipt

Dear Sirs/ Madams,

I support the current operation by using the scheme of control. It can make Electricity Company to invest a reliable power supply system for their customers. Otherwise an unreliable supply will be resulted, like California crisis. It is totally unacceptable for Hong Kong as an international finance center. The coming scheme of control should not be offered less than 15 years because power plant equipment to be installed is a long time process and long term investment. The rate of return of all power plant equipment to be invested should be the same. It should be no discrimination among generation plant, transmission plant and distribution plant. They are all essential and necessary for the supply of electricity to customers.

It is worth to keep on using the existing scheme of control. Then we will continue to enjoy a reliable electricity supply as it is.

D. Hung

Subject: Future Development of Electricity Market in Hong Kong – Stage II
Government Consultation

☐ Urgent ☐ Return Receipt

Dear Sirs/ Madams,

One news from today's newspapers is to charge the customers to use counter (to use teller) for bank services. It is applicable for low value customers of the bank. High value customers will not be affected and even more free banking services is currently provided. It happens after no fixed mutual interest rate between banks. Banks has to squeeze the profit margin in all area under open competition environment. It may come true to open the electricity market. Supply companies will compete for high demand customers. Lower tariff will be provided. Low demand customers will not be expected to get any benefit. If they are distance from the electricity supply substations, they may gain penalty for their high transmission losses and large investment on long supply cables. Such penalty is to compensate the low profit margin getting from the high demand customers.

I do not appreciate to open the electricity market as a low electricity consumption citizen. I support to keep on using the existing scheme of control and continue to enjoy the electricity supply without discrimination between profitable customers and non-profitable customers.

D. Hung

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen of 18 years and having witnessed the deterioration of the air quality since my arrival, I am very much concerned about the air pollution caused by the power stations. So much so that I am going to leave Hong Kong earlier than I would otherwise wish to. The Government must enhance control in the electricity market, so as to restrict pollution produced by power generation. Control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I believe:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. I support Renewal Energy, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. The SAR government should establish a policy on energy saving and identify targets to be achieved;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

The SAR government owes the people of Hong Kong the blue sky of yester year and air that is clean to breathe.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;

2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;

3. The investment in renewable energy should earn a higher level of permitted rate of return;

4. The targets and time-table of reduction in coal burning should be set;

5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;

6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

d johnson

Mar 1, 2006

Dear Secretary for Economic Development and Labour.

Comment

On

Future Development of
The Electricity Market in Hong Kong
Stage II Consultation

Please consider our following justifiable comments:

Item	Comment	Pros
1	Highways Dept to impose heavier economic fine on wasteful, unnecessary re-excavations in unjustifiable short period	This is in line with Policy Objective "to minimise the environmental impact caused by the production". Wasteful, unnecessary re-excavations increased costs for power companies and caused environmental impacts on air, energy, landscape, visual, material, noise, waste and water.
2	EDLB to regulate electricity price rise to a range (say 90% to 110%) of Composite Consumer Price Index rises averaged over a period (say 10 years)	This is in line with Policy Objective for "reasonable prices". Electricity price rises have led Composite Consumer Price Index rises for years. Electricity price rises also indirectly lead to price rises for service industries (especially catering, laundry etc), which in turn charge consumers more. Electricity is essential utility.
3	EMSD to further promote energy saving	This is in line with Policy Objective for "efficient" energy supplies. Petroleum and gas will be too expensive to extract in tens of years. Import price rises will increase costs of living and businesses. The general public is afraid of possible danger of nuclear power stations.
4	HKSAR Gov to continue production and use of Renewable Energy	HKSAR Gov sets a good example
5	EPD to study waste to energy	This mitigates waste and defers demand for landfill
6	To sponsor tertiary institutions on applied researches on energy saving and Renewable Energy	Tertiary institutions have talents who are independent of power companies
7	To establish an authority (or to expand EMSD) to comprehensively regulate	Electricity, gas and petroleum are competitive substitutes for consumer

	energy issues (including electricity, gas and petroleum)	protection
--	---	------------

In principle, we support government recommendations.

Yours sincerely
DAB

**Subject:
Future Development of the Electricity Market in Hong Kong
– Stage II Consultation**

I have read the government's consultation paper and some comments from the discussion forum in the website of your bureau.

I also have read the views of CLP Group through its website. Now I think I have formed my own views on the subject. Below is my thinking:

1. Develop a clear energy policy that must be long term. Energy policy objective is good as indicated in the consultation paper but it's unclear of how to get there.
2. Must not rely on only one single fuel for production of electricity.
3. Give more incentive to encourage more environmental improvement works.
4. Set emissions targets in an objective way.
5. Extend the contract and improve regulatory oversight.
6. The duration of the new contract must not be short. 15-year is about right.
7. Must not open up the market pre-maturely.
8. Say 'no' to the Chinese company which wants to come to Hong Kong for only self interests.
9. Must not allow third party to duplicate the networks which occupy public space and resources.
10. Must not allow third party to selectively grasp big consumers but ignore small

consumers.

11. Learn from overseas how to progressively open up the electricity market; don't repeat the failures in other countries.
12. Set return for the power companies in an objective way, on the basis that reflects the characteristics of the electricity supply industry and provides incentive to attract continuous investment.
13. Do not apply double penalty to environmental performance, as it will be unfair.
14. Do not complicate the matters by applying different rates to different assets.
15. Government to enhance expertise to oversee the performance of the power companies.
16. Do not allow politicians to meddle up the tariff approval process. The government should have its own judgment as whether the tariff level is appropriate or not.
17. Carry out tariff comparison and make known to Hong Kong people so that we can know whether the current tariff levels of the power companies are reasonable or not.

Please carefully consider my views.

Yours sincerely,

Lower Albert Road,
Central,
Hong Kong.

Dear Sirs,

Future Development of the Electricity Market in Hong Kong
Stage II Consultation

I am an accountant and have some comments on your Stage II Consultation paper as summarized below:-

It seems to me that the return on asset given in the Stage II Consultation paper is not attractive to the power companies enabling them to invest further in comparison with the return on asset of the bus companies in view of the great difference in "liquidity" of their assets and the long investment return period, and hence, the uncertainty. Therefore, the existing SCA should be maintained with no or very little changes in order to enable power companies to have the necessary incentive to keep on their investment to provide reliable electricity supply to Hong Kong.

Yours faithfully

Dear Sirs/Madam,

I have read the Stage II Consultation Paper and would like to submit my comments. Please see the attached file. Thanks.

Daisy Chan

Electricity supply letter.doc

Dear Sirs,

I have read the Stage II Consultation Paper and would like to submit my comments as follows.

As an electricity user, I of course would like to pay a lower tariff. But the more important factor is the reliability of electricity supply. I work in a Securities Agent and is also a mother of 2 small children. To me, electricity reliability is very important both for my work and family. As a big financial city in the world, power reliability is essential for the HK Stock market. One can easily imagine the impact and financial loss to HK if power failure occur to the Stock Exchange System.

Like many families in HK, electricity is an essential element in our everyday life. It would be very inconvenient for myself to take my kids to walk up a building of 20 storeys in case the lifts are not working due to power failure. Many learning activities of my kids will be affected too if blackout occurs. In fact, my electricity expense is low when compared with expenses likes monthly house mortgage, meals, education expenses and clothings, etc.

The customers of the 2 electricity power companies in HK have seldom suffered form black-out. I consider the current level of tariff is in line with the quality of the service. To set a too low rate of return for the power companies will discourage them to continue their investment in power industry and this will affect the supply reliability and ultimately our quality of life. I urge the government to maintain the current level of rate of return to the power companies and do not propose too many changes such as the 4-tier rate of return structure.

Regards,

Daisy Chan

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Stage II Consultation Response

☐ Urgent ☐ Return Receipt

Dear Sirs,

With reference to the Stage II Consultation Paper, I have reservation to the proposed regulatory framework.

Please take lessons from the experience of the energy crisis in Californian in 2001 as well as a series of power cut and failure in Europe and America in 2003 given rise from the aggressive and overweening approach of the US and those European countries to their electricity market. Huge economic losses were suffered.

In Hong Kong, electricity is not only essential to daily life but is also critical to our economy and contributes to our competitiveness. Legislators may not be care for the long term security of the electricity supply as it would not be their responsibility by then when problems come up.

The proposed 7% to 11% rate of return appears to be not attractive to the the investors who will prefer to shift the capital to other more profitable business and keep conservative investment plan to the new generation and transmission plants as well as minimal maintenance and upgrade. As such, the long term security and supply reliability must be jeopardised and no one would like to see what happened in California in 2001 to happen in Hong Kong. On the other hand, the 10 years regulatory period is certainly too short for this kind of long term fixed investment of substantial amount.

As summary, I reckon that the existing rule of game should be continued as far as it is functioning well. Please do not undermine Hong Kong's competitive edge due to compromise with the short-sighted political noise.

Regards,
Daisy Luk

Subject: Consultation Paper Stage II
☐ Urgent ☐ Return Receipt

Dear Sirs,

I would like to express my views on Stage II Consultation Paper in the attached file.

Regards,

Daisy Wong

L11.doc

Dear Sir,

Re: Stage II Consultation on Future Development of the Electricity Market in Hong Kong

I would like to share some views for your consideration.

- 1) Rate of Return reduced from the present 13.5% to a range of 7 – 11%

My main concern is reliability. I am enjoying high reliability supply at the present reasonable tariff when comparing with current living standard. I think the proposed permitted return at a range of 7-11% is not enough to attract investors who may be unwilling to invest when the return cannot compensate the corresponding risks. Indeed, 7% permitted return is too low compared with other similar investment in Hong Kong. Especially, the power industry is requiring enormous and long-term investment. To conclude, lower permitted rate may lead to insufficient investment and the reliable power supply will be affected.

- 2) 10-year regulatory period with an option to extend for another 5 years

Since the power industry is requiring to incur billion dollars on the investment, I think a regulatory period of 15 years is appropriate. The power companies expected their payback period with much longer period than 10years. With such short period of time, the power companies may be reluctant to continue their investment in power systems and the reliability of power supply would be affected. Therefore, I think the regulatory period should be kept at 15 years which can balance the interests of various stakeholder (investors, consumers etc...).

- 3) Increased interconnection between HEC and CLP

Again, the tariff is quite reasonable. Personally, I believe that the increased interconnection between HEC and CLP could not contribute a great economic benefit but could force the Hongkong people to pay the extra cost for such interconnection.

Thank you for your attention.

Yours faithfully,

Daisy Wong

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Clear the air please!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. Demand management must be built into the profits of the company. There must be a mechanism where they profit if they can significantly reduce energy demand. At present they only profit from Increased demand.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

☐ Urgent ☐ Return Receipt

Please have the two electricity companies to speed up for the filter
process of producing the coal-fire electricity

17 March 2006

Mr. Stephen Ip
Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Mr. Stephen Ip,

Stage 2 Electricity Market Consultation

After reading your consultation paper, I find it has largely maintained the current regulatory regime and is recommendable. I think this arrangement can safeguard Hong Kong to continue enjoying the good electricity service which is critical to Hong Kong's competitiveness.

However, I would like to draw your attention to the following issues which may need further improvement:

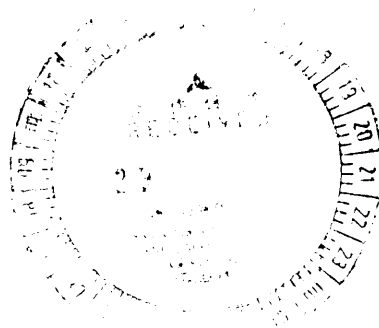

- It is proposed that the regulatory period will be shorten to 10 years, with an option to extend for another 5 years. Obviously, this arrangement aims to facilitate future opening of the electricity market. However, this proposal is simply too simple – all the risks have been put on the shoulders of the power companies and such an unfair risk allocation is, in my opinion, not workable. From a risk management point of view, the power companies will feel that they are facing a fixed 10-year regime with no chance for extension. As such, how can they have confidence to invest?
- Introduction of new supply from China is a choice that must be evaluated with cautions. Since the air quality of Hong Kong is much affected by the emissions in the mainland, especially the PRD, importing electricity from China will probably worsen the air quality in Hong Kong since mainland power plants are in general far more polluting than the ones in Hong Kong.

Please consider my opinions.

Yours sincerely,

Daniel Chan

Subject: Comment on Electricity Market - Stage 2 Consultation Paper
☐ Urgent ☐ Return Receipt

Dear Sir,

Your second consultation paper has embarked on the right track for the future electricity market. I firmly believe that the present regulatory framework is a very suitable and cost-effective mechanism to enable the power companies to provide uninterrupted and clean electricity at reasonable tariff.

However, I have reservation on your other proposals.

Planning grid access for power from Mainland should be taken with the greatest caution, as it would jeopardize the local supply reliability and would encourage running of the severely polluting small thermal power plants to make up the capacity. With the fast growing economy in Mainland and particularly around PRD, power shortage across the border will persist for a considerable period of time. Indeed, it has recently been reported that the Guangdong Economic and Trade Commission expected a power deficit of 4,000 to 5,000 MW for the first half of 2006 and the Commission set up a number of mitigation measures including power rationing.

Shortening the regulatory period from 15 to 10 years will deter investment. One should realize that electricity infrastructure is a long life capital-intensive investment and continuous funds are needed to maintain its reliability by renovating/renewing the plants. How can any investor balance his account if such investment may be stranded after 10 years?

Varying the Rate of Return for different assets will unnecessarily complicate the regulatory process and consume more administrative resources. With the proposed 9% ROR for Transmission and Distribution Asset against the recently approved 9.7% for public bus investment coupled with a much longer capital repayment period, it would certainly compel power investors to other more lucrative business. Thus, the community will face the risk of power uncertainty.

I earnestly urge you to adopt a more pragmatic approach to avoid any negative impact. As a responsible government, you should recognize the present superb electricity service and determine a more appropriate ROR acceptable to all stakeholders not just the outspoken groups.

Thank you for your attention.

Daniel Lee

☐ Urgent ☐ Return Receipt

Dear Sir,

I refer to the subject consultation paper and would like to express my views as follows:

Electricity supply involves huge and long-term investment. Sufficient rate of return should be given to the electricity supply companies. Given the present prime rate of 8%, it seems a bit harsh to the electricity suppliers to reduce the present ROR of 13.5% to a range of 7 - 11%.

The Government granted the Commercial Radio 12 years when renewal of its broadcasting licence. Granting the electricity suppliers 10-year regulatory period seems rather short since the investments to electricity supply is much than radio broadcasting.

Regards
Daniel Leung

Subject: THE ELECTRICITY MARKET IN HONG KONG STAGE II
CONSULTATION
☐ Urgent ☐ Return Receipt

CONSULTATION PAPER ON FUTURE DEVELOPMENT
THE ELECTRICITY MARKET IN HONG KONG
STAGE II CONSULTATION

Dear Sirs,

I live on Hong Kong Island. Despite the slightly higher tariff on the island, I favour the status quo of the present Scheme Of Control which has brought more than 40 years of reliable electricity to us at reasonable price.

30% to 50% reduction in return will not provide sufficient incentive for the utilities to invest in electricity supply. 10 years Scheme duration is also too short compared to the 30 years life of electricity supply equipment. The risk will be high compared with the proposed return rate and electricity supply investments will naturally be reduced. Our electricity supply reliability will be at risk, not in short term but in medium to long term. I believe that maintaining the current return rate and contract duration is more appropriate and less risky.

I would share with you a true story that tells us not to give up our own reliable supply. My friend manages a toy factory in Dongguan. The factory used to have 2 generators to supply electricity for normal production use and the city electricity only served the lighting and other non-essential uses in the dormitory. A few years ago, the local electricity official came and told him that he just needed to pay a one-off capacity addition fee; he would have enough "cheaper" city electricity for his factory. He could sell his generators to pay part of the capacity addition fee. He agreed and fortunately he sold only one of his generators.

He imported base load electricity from the city and used the remaining generator to maintain the production during the occasional power outages. It went well for a couple of years. Then three years ago, the electricity officials told him that due to power shortage, he had to turn off the grid electricity supply to his factory two days a week. His only generator could not meet the full production need. So he had to scramble for his second generator back. Otherwise the lost production would cost him millions of dollars. He had to pay 2 million dollars to buy back a similar generator that he had sold for 0.3 million dollars. He vowed never to sell the generators again. This is a true story of relying on Chinese grid supply.

If Hong Kong does not have enough of her own generation capacities, Hong Kong people will suffer. Don't count on the electricity import from Mainland China, not in 20 years!

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

27 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices, Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Mr. Secretary,

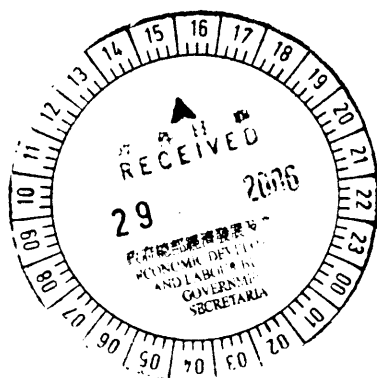

Stage II Consultation of Future Development
On the Electricity Market in Hong Kong

With reference to the Stage II Consultation Paper, I would like to express my views on the Government's proposals.

Government has proposed a new rate of return of 7-11%. There is no basis for the Government to lower the permitted rate of returns below the existing level of 13.5%. Government must provide justifications that the new permitted rate of return is fair and sufficient to attract huge and long-term capital investments required by the power companies to maintain the existing high level of reliability of electricity supply. The present 13.5% rate of return for the power companies has been proved that there are adequate incentives to encourage appropriate investment of electricity infrastructure to ensure high reliable electricity supply and good services to the consumers. Therefore, I support to maintain the present 13.5% permitted rate of return in the post-2008 period.

The proposal of Government approval for all tariff adjustments is unreasonable. Power companies must be allowed a reasonable chance to recover their business costs and fair profits on invested capital through their tariffs. If all tariff adjustments are subject to Government's approval, the costs and permitted returns for power companies will be no longer sufficiently protected. It may be subject to undue political pressure, which shall increase risks borne by investors.

I wish my views can be considered and reflected in the Stage II Consultation.

Yours faithfully,

Daniel Lu

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Views On Future Development of the Electricity Market in Hong Kong - Stage II Consultation

☐ Urgent ☐ Return Receipt

Dear Sirs

I praise the Government for exercising a public consultation on the above issue, which makes us gain more knowledge of the ways how the Government handle policies and the difficulties in running utilities in Hong Kong. I look forward to see the same being applied to other energy suppliers in Hong Kong.

As the SoC is about to expire, we certainly have to review the current arrangements to see whether there is a need for changes so as to match with the prospective future well-being of Hong Kong. What I can see these days, the focus of the issue has been put on whether there are opportunities in lowering electricity tariffs.

Ain't any services have a price? To me, around 2% of income in spending on electricity is much more than it worths, against what we can enjoy - such as convenience, speed, comfortability, etc. I believe that the price range is not totally comparable with the tariffs in any other places, because we have different society behaviours, sources of fuel supplies and governmental controls, etc. in different places. After listening to the explanations for the power companies through the media, I agree that the tariffs of the two power companies in Hong Kong are not necessarily comparable. I would suggest that the Government subsidize to reduce the tariff difference between the two power companies, so that it would be more fair for our lives over the two signatories, and for stable development of Hong Kong in the longer term. I also think that the risks they take may not be the same that the reasonable rates of return of them may not necessarily be the same. In this regard I doubt about the proposed figures by the Government (7~11%) that the way it was being yielded was not made known to the public. I think I can agree with a figure only when their backgrounds are known - both the Government and the two power companies. The same being applied for me to the reduced period of regulation from 15 years to 10 years. There are no detailed information on how they were being assessed and yielded.

There were also other means being proposed that might bring down the electricity tariff, such as interconnection between the two power companies, and (prepare for) future deregulation of

the electricity generation facilities. It is clear from the Consultation Paper and other publications that interconnection may not bring down the cost and importing electricity from the Mainland is not feasible in the next decade. I agree that these issues worth study, but may not be as important as the development of renewables. Can we put more resources on renewables that have obviously much more potential benefits?

For pollution caps that would be imposed on the power companies, I do not find any descriptions on how they are being set. I think the best can be done relies on the available technology and investment incentives of the power companies. I am afraid that a too stringent cap that could not be met would finally adversely affect the excellent electricity service we have today. I think the Government should subsidize on the investment on pollution reduction devices, rather than placing a negative incentive to the power companies.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Stage II Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To: electricitycommentstage2@edlb.gov.hk

Stage II Consultation Paper on Future Development of the Electricity Market in Hong Kong

Having read the stage II consultation paper on future development of the electricity market in HK, I would like to submit my comments below:

1. Electricity supply from Mainland China

- According to poor track record in supply reliability in Mainland, we cannot afford low supply reliability.
- There is no sign of electricity supply surplus in Mainland (especially in Guangdong region) that could be exported to HK in foreseeable future.

2. 10-year regulatory period with an option to extend for another 5 years

- The proposed regulatory period not commensurate with long term investment cycle of power industry
- A sufficient long period must be provided in order to mitigate the risk on the investment.
- Lack of investment in future equipment and infrastructure could be happened
- The current 15-year regulatory is appropriate and should be retained.

3. Rate of Return (ROR) linked to emission caps

- Under current Air Pollution Control Ordinance, power companies are already subjected to penalty for failing to meet emission caps. This would mean double-penalty on power companies and the arrangement is not reasonable and unfair.

4. Multi-tiered rates of return applied to difference types of assets

- It is not reasonable to differentiate types of assets as the costs of raising capital for the different assets are the same
- Additional administration costs could not be avoided and be borne by customers

In conclusion, I consider adequate and reliable electricity supply is required for Hong Kong. Keeping the SCA in current form should be the best arrangement for Hong Kong citizens and foreign investors.

Best Regards,
Danny Kong

Subject: 我要清新空氣
☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: 第二期香港電力市場的發展

☐ Urgent ☐ Return Receipt

本人認為現階段的香港電力市場並不適合開放給其他公司，尤其是中國大陸。因現時中國大陸華南地區的電力需求相當緊張，加上她們的監管及執法不嚴，若她們發生問題，便會直接影響香港電力的可靠性及穩定性。所以香港政府不應該因要改革而改革。我身為香港市民所要求的是一個可靠、穩定和高質素的電力供應，正如現時本港兩間電力公司的服務。

Subject: HK Electricity Market Consultation Stage II - Personal comment from Danny TK Ho

☐ Urgent ☐ Return Receipt

Dear officer in concern,

I read the Stage II Consultation paper and have something to say.

<?xml:namespace prefix = o ns = "urn:schemas-microsoft-com:office:office" />

Comparing with many other countries, the electricity supply in Hong Kong is really good. I heard from the news in the past years that major power breakdown occurred all over the world, even in the developed countries like USA, UK, Canada, etc! I leave in Kowloon and as I remember, the longest no-electricity period I experienced in my life is 30 minutes. I am so far very satisfying with the services provided by China Light and Power, so do I believe for the people in Hong Kong Island.

I don't know much about the background and the terms of the so-called scheme of control system, but I think that it worked well in the previous days, didn't it?

Well, nobody will refuse to pay for a! lower tariff of electricity. However, I don't want to see the outcome that a lower tariff will bring poorer services and, most important, unreliable supply. I am not the fans of the two power companies, but it is rational a privately-owned company to reduce the investment (in technical equipment development) if the terms of payback is getting unfavorable. In fact, I think the present tariff paid each month is acceptable and affordable!

In short, I would like to see a "fair deal" between the Government and the two power companies that can bring the best benefits to the Hong Kong citizens and also the stakeholders of the ! two companies!

Thank you for taking note of my comments!

Danny TK Ho

Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

17 March 2006

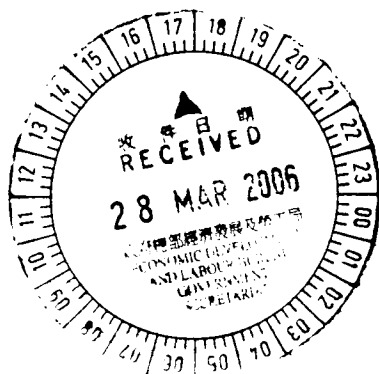

**Stage II Consultation Paper On Future Development
Of The Electricity Market In Hong Kong**

Dear Sir,

After reading the consultation Paper on “Future Development of the Electricity Market in Hong Kong: Stage II Consultation”, I would like to support your policy objectives especially the paramount importance of the reliability and safety of the electricity supply.

I would also like to comment as follows:-

- (a) Most of the views received from Stage I Consultation indicate that reliability and safety of electricity supply are of paramount importance. Therefore, Government must be very careful with the issue “New Supply Sources from the Mainland”.
- (b) Due to the rapid economic growth of Guangdong, the tight electricity supply situations in Guangdong will continue. We cannot rely on new supply sources from the Guangdong which has power shortage as it will jeopardize the supply reliability in Hong Kong.
- (c) If Hong Kong imports electricity from Mainland China, I cannot imagine what happen in case of operating problems or disputes. The responsibility to ensure reliability and safety of electricity supply will be blurred.
- (d) To cope with the tight electricity supply situations in Guangdong, there are a lot of highly polluting small thermal power plants with low efficiency, which are still generating electric power in Guangdong. These small thermal power plants are the severe polluting sources in Guangdong and their emissions are one of the major contributing factors for the deteriorating air quality in the Pearl River Delta region. We should not choose to buy the polluting electricity from China even if the price is cheap.

Yours faithfully,

Danny Yan

3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

darren plested

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am concerned about air pollution in general and the impact it has on our health and ultimately the health system.

Much of this pollution is caused by the power stations. I strongly urge the government to review regulatory control of the electricity market to minimise all pollution produced by power generation. These measures must prevent the electricity companies from avoiding their social and environmental responsibilities.

I support renewable energy (RE) such as wind, hydo and solar power whilst limiting methods that generate green house gas. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those companies that cannot achieve the caps should have their rate of return reduced;
2. Investment in RE should earn a higher level of permitted rate of return;
3. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. The SAR government should establish concrete and clear energy saving strategies and targets;
4. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The cooperation in RE development between Guangdong and Hong Kong should be accelerated, including the regional blueprint for renewable energy development.

I request the SAR government introduce measures to bring back the blue skys and a breath of clean air to the region.

☐ Urgent ☐ Return Receipt

Dear Sir/Madam,

I write to submit my opinions on future developments of the electricity market in Hong Kong.

On pollution control:

1. Pollution resulting from electricity generation activities should be regarded as a part of the costs of electricity production. Such costs should be correctly reflected to producers and end-users.
2. To this end, standard economic theory would suggest to impose a tax on polluting production activities. However, under HK's market structure, a more practicable approach is to impose a maximum emission caps per unit of power generated, set under the power companies-- licences, and can be reviewed from time to time.
3. Considering the fact that existing production facilities have yet to be able to meet stricter environmental requirements, the above-mentioned emission caps should be allowed to converge to, say, by several 3-year phases, to a standard that is compatible with maintaining an acceptable air quality in HK.
4. CLP selling power across the border is the company's business outside the border but at the expense of HK's air quality.
5. It was argued by the CLP that their pollution can help prevent even worse pollution across the border - meaning that if the demand is not met by CLP's supply, end-users in the Mainland would seek other ways of meeting their demand, which might end up with a more polluting way of production that could have affected HK even more.
6. While there are some valid points in such an argument, this does not prevent the HK authority from imposing stricter emission standards on CLP's facilities that contribute to their Mainland business. In short, a more demanding environmental standard should be imposed on such facilities that are mainly not serving HK but the Mainland.

On rate of return:

1. Electricity demand is very "inelastic", meaning that the quantity of electricity demanded is very insensitive to changes in prices. Under the scheme of control, such inelastic demand effectively provides a high degree of assurance to the power companies such that they can easily achieve the permitted rate of return. This is almost like a risk-free return.
2. The two power companies are "natural monopolies" and it's difficult to introduce competition

under the present set up. The only powerful regulatory tool is the permitted rate of return.

3. Such permitted rate of return should be linked to a long-term risk-free interest rates plus a premium. At present 10 year US Treasury yield is about 4.8%. In my opinion, a permitted rate of return should be somewhere between 8-9%, which should be more than compensating for their costs of capital.

4. Linking the permitted rate of return of power companies with the total emission caps, or other environmental performance criteria, is not a good idea.

5. By design, under the scheme of control, investment made by the power companies will automatically raise the "permitted profits" according to a certain permitted rate of return.

6. Thus, the authority should set emission standards such that the power companies would need to invest on facilities in order to meet them. Any such investment! s on reducing emission would be automatically "rewarded" by the matching increase in permitted profits. (Thus, there is no need for providing additional incentives to the power producers). Such increase in permitted profits should be derived from setting electricity prices, based on the "end-users pay" principle.

7. The fact that CLP derives a part of its profit from the Mainland can complicate the implementation of the scheme of control. I do not know whether the investment made on facilities for meeting demand in the Mainland would also be subject to the permitted rate of return. If the answer is yes, then HK consumers effectively provide a "guarantee" to CLP's rate of return for their mainland business -- meaning that if earnings from Mainland business are not sufficient to provide a certain profit matching the corresponding investment, the company can raise prices of electricity in HK to "compensate" for that. If this is ! true, it is unreasonable.

8. The scale of CLP's facilities should be limited to mainly meeting HK's demand. The authority should be closely watching their demand projection and prevent them from making overly optimistic forecasts on future demand. Overly optimistic forecasts can lead to over-investment -- this can be at the expense of HK end users under the scheme of control. If the excess capacity is used for meeting demand in the Mainland, this is at the expense of HK's air quality.

9. To deter over-investment on capacity, the forecasting track records of the two power companies should be made publicly available (if they are not yet). Forecasts consistently over-shooting the actual demand and hence over-investing should be penalised in some way. The penalty could either be a deduction o! f a certain sum from the assets that are eligible for the permitted return, or simply, for administrative convenience, to reduce the permitted rate of return by a margin (say 0.5%). A clear and transparent set of rules (formula alike) should be made available to the public.

Thank you for your attention.

Best regards,

Daryl Ho

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a resident of Hong Kong for over 10 years I'm becoming increasingly frustrated with the state of our air quality. There really has been a marked deterioration in the last 4-5 years. As an Engineer who frequently works in an outdoor environment it is easily noticable. When I first arrived in HK I remember there would be weeks on end that we had clear skies. Today, we are lucky if we get a couple of days a month where we can enjoy the views with clarity.

Now that I'm starting a family, my first child to be born in a few months time, I am greatly concerned by the continued deterioration of our air quality. It affects our quality of life. Like many of my friends with young families, the talk is what can we do to reverse this pollution trend - if it continues many of will be forced to move overseas.

I often wonder, how many of our top civil servants have educated their children through the HK school system till they are 18. My guess is not many. It cannot be due to lack of education quality - there are plenty of great local schools sending top students to the worlds best universities. But I'm sure HK's worsening air quality is a factor.

From those of us who pay your salaries, please take the initiative to negotiate with your Guangdong counterparts to CLEAN OUR AIR.

Regards
David Clayton

Subject: Future development of electricity in HK
☐ Urgent ☐ Return Receipt

I write with reference to the consultation paper of the future development of the electricity market in Hong Kong. My main comment on this document is that it fails to adequately address the savings in generation and generating capacity that could be achieved through vigorous advocacy of increased energy efficiency. The consultation paper contains proposals that represent minor tinkering with the existing supply model, with the result that the two electricity suppliers are still encouraged to generate and sell as much electricity as possible. The outcome is, of course, more consumption of fossil fuel, additional emissions and consequential long-term effects on climate.

I note that Civic Exchange, WWF and the Rocky Mountain Institute have developed a document giving a detailed response to the consultation paper; that document has recently been submitted to Government for consideration. Among other things, the Civic Exchange *et al.* document encourages adoption of a model whereby the power companies can make money through saving energy: increasing energy efficiency is, in fact, the easiest and most effective way of reducing emissions and would also make a real contribution to Hong Kong's sustainable development. I would like to record that I fully support the proposals made in the Civic Exchange *et al.* document, and I hope that they will be adopted by Government.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

24/03/2006 09:55

To Economic Development and Labour Bureau,

I have been a HK resident for 23 years. My children were born here and HK is my home, however, in recent years the deterioration in air quality has been so bad that I, and many of my friends, are seriously considering our future in HK. The pollution is a constant source of discussion at schools and all social gatherings. I now advise family and friend seeking to visit from overseas to shorten their intended stay in HK because HK is no longer the jewel it was. For the sake of my children's health I have to consider leaving HK, something I do not want to do, but will unless there is some immediate and genuine effort by the HK Government to enforce emission standards on all major polluters in HK, including the power companies. I fully support the Friend's of the Earth submission below.

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;

David Higgins

親愛的葉局長

本人 David 是中電電力公司職員

對中電發展第二階段諮詢文件的意見：—

一. 規管協議年期最好保留15年至20年因電力行業是很長遠的投資有利於社會及市民的信賴。

二. 不贊成外來集團式公司來香港投資電力。

中電有一百年供電歷史安全可靠穩定。

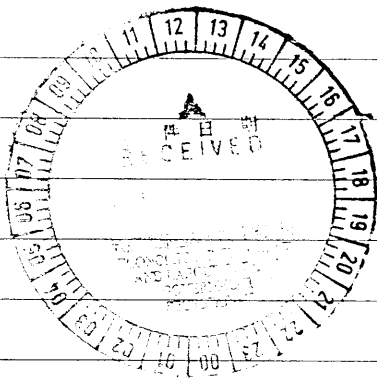

外來投資者資金雖要充裕用人要專業電力供給要確保市民信賴，但外來投資者不會冒險做此事所以保留中電維持現有供電水平最好。

三. 政府建議回報率最好在10%-12%。

因為回報好，股東們對中電有信心及樂意投資中電股票有利。

四. 推行環保中電樂於與政府合作

要有長遠計劃專家的好意見及政府環保署要積極與中電通力合作才可行。

David Hk
7/3/2006.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

David Innerdale

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Attn: Economic Development and Labour Bureau

To whom it may concern,

I am a Hong Kong Permanent Resident and I am distressed at the amount of air pollution caused by the power stations. Flying into Hong Kong Airport is like arriving in the land of Mordor - which is to say a dark and murky place.

I agree with the pleas of others that the government enhance control in the electricity market, so as to reduce the pollution caused by electricity power generation. These control measures should enhance and reward good social and environmental practices by the Electrical Generation Companies. The following recommendations seem sensible and appropriate measures to improve matters whilst rewarding best practice:-

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. When the companies cannot achieve the caps their the rate of return should be reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas and other pollution
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We request that the SAR government to set up a concrete and clear energy saving target;
5. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of solar, wind and wave energy development.

In addition to the above I suggest the following: -

A. Institution of cogeneration agreements whereby third parties that generate small amounts of electricity can achieve credit for supplying electricity back into the grid. This is commonly used to make solar power viable. During the day buildings with solar electrical panels feed into the grid, the metered contribution is then credited back during the evening.

See this standard IEEE 929-2000, Recommended Practice for Utility Interface of Photovoltaic (PV) Systems - this sets out the specification for equipment to interconnect with electricity grids.

Hong Kong is uniquely placed to encourage this with the many very large buildings we have. There is even an HKHA estate in Tsueng Kwan O with the built ready for extensive electricity panels on the roof tops.

Government developments should require such Solar Electricity cogeneration, Land Lease Agreements should encourage such cogeneration with reduced premiums or increased Plot Ratio or other credit.

B. Wind and Wave generation pilot schemes and R&D should be encouraged by adjusting the Rate of Return during the trial period with the view to future full scale implementation and a permanently higher rate of return allowed for such generation.

C. A higher Rate of Return should be permitted for low emission fuels such as Gas.

D. A comprehensive Energy Development, Conservation and Use Authority should be instituted to coordinate different government departments including Transport, Housing, Lands as well as The Economic and Labour Bureau. The aim of which would be to maximise energy efficiency, opportunities for cogeneration, minimisation of air pollution as well as the regulation of the Electrical Power Supply Companies to encourage a better environment as well as a safe, secure, and high quality electricity supply.

I humbly request that the SAR government make strenuous efforts to bring us back blue sky days. It would be a breath of fresh air.

6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air. In fact we are seriously considering a departure from Hong Kong, our adopted home and what used to be such a wonderful, safe and 'Healthy' place to live and raise a family. In the last several years both my wife and I (under Doctor's prescription) have had to begin using inhalers to act as abortive medications in order to avoid having to use antibiotics to rid ourselves of horrible bronchial infections that have become more and more frequent over the past 8 years of our lives in Hong Kong.

I of course recognize that Hong Kong cannot control the pollution coming from North of the border but we must acknowledge that the problem exists and it must be dealt with head on for the sake of all of Hong Kong residents as well as those Chinese living in southern China. We have the capacity to prevent this incessant pollution from occurring now, we don't have to repeat the mistakes of the past.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；

2. 可再生能源的投資可享有較高的准許回報率；

3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 - 視作可再生能源；

4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；

6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。
7. 加快與廣東省方面洽商改善廢氣排放，從而改善香港空氣質素。

7. 加快與廣東省方面洽商改善廢氣排放，從而改善香港空氣質素。

By fax No. 28684679

27/3/06

The Secretary for Economic Development &
Labour
17, Central Gov't Offices, Main & East Wings
Lower Albert Road, Central

Dear Sir

Future Development of the Electricity Market
in Hong Kong - Stage 2 Public Consultation

In respect of the captioned topic, I would like to submit my views for your consideration:

a. No matter whatever the consultation outcome would be, it is of paramount importance that the STABILITY of electricity supply be maintained, bearing in mind that Hong Kong is one of the international monetary centres. It cannot afford any interruption in electricity supply even in adverse weather conditions.

b. The present electricity charge, as regards China Light & Power Co., Ltd is reasonable, having regard to its electricity supply in a reliable and stable manner. As a comparison, the bus fare during the past 50 years has generally gone up over 20 times for its urban routes in Kowloon and/or New Kowloon, despite provision of air-conditioned buses; while the electricity charges have gone up about 5 times only.

Yours sincerely

D Lee

4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

david luxton

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

27 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices, Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Mr. Ip,

Views on Stage II Consultation Paper on Future Development
of the Electricity Market in Hong Kong

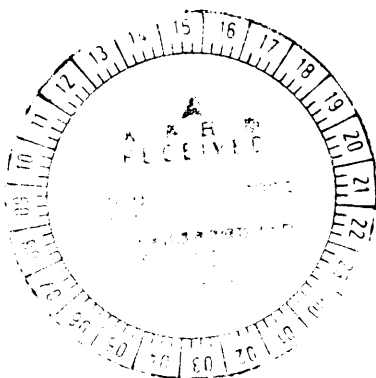

With reference to the Stage II Consultation Paper, I wish to express my views on some of the Government's proposals of the future development of the electricity market in Hong Kong.

I totally support your policy objective to ensure the public can enjoy reliable electricity supply after 2008, which is of paramount importance to Hong Kong society.

Government should be very careful with their proposal to lower the permitted rate of return from 13.5% to 7-11%. If there are inadequate incentives to encourage investors to invest in the electricity infrastructure, I am afraid that our highly reliable electricity supply would be deteriorated.

The government has proposed to shorten the regulatory period from 15 years to 10 years. But the government does not consider the long-term nature of the power industry, where asset lives are usually more than 30 years. If regulatory period is shortened to 10 years, there will be increased investment risk. The power companies may face a fixed 10-year regulatory period with no chance for extension and will be discouraged to invest in the electricity infrastructure. I support that the 15-year regulatory period as adopted in the existing Scheme of Control Agreements should be maintained.

I request the Government to assess the proposals more carefully in the Stage II Consultation Paper and sufficient incentives and 15-year regulatory period must be granted to the power companies to ensure an adequate and reliable electricity supply in the post-2008 period.

Yours sincerely,

David Ng Ka Wai

HONG KONG

Dear Sirs,

Re: **Stage II Consultation on
Future Development of the Electricity Market in HKSAR**

We are a small-medium enterprise (SME) in Hong Kong and our core business is in project consultant and project management. We would like to express our view on the Stage II Consultation on the future development of electricity market in Hong Kong Special Administrative Region (HKSAR).

We fully understand the current controversy about the electricity supply market. We agree that there should be regulatory agreements between the Government and the power companies. However, as electricity supply business involves huge investment in infrastructure and a long investment cycle, it is important that a reasonable profit margin could be maintained in long term for the investor(s) or potential investors. The electricity supply that we are currently enjoying is very reliable and we hope that the power companies would continue to invest in the power infrastructure for long term sustainable development of HKSAR.

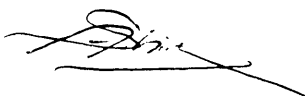

As reliable electricity supply is an essential service to maintain the competitiveness of HKSAR, we hope the Government should get the concurrence among different stakeholders before implementing any change of the existing system.

Thank you for your attention.

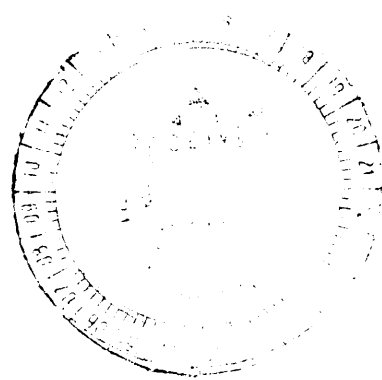

Yours faithfully,

For and on behalf of

Subject: For the Health of HK

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen for over 20 years, I have noted with concern the deterioration of the air quality in HK. In bringing up a family in this polluted environment I am very worried for their long-term health. The action of the HK SARG is very slow and passive and the danger not only to its citizens but is future as an Asian world city is also at stake. I would like to see the following action taken as a start:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;

2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;

3. The investment in renewable energy should earn a higher level of permitted rate of return;

4. The targets and time-table of reduction in coal burning should be set;

5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;

6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations and road vehicle emissions. I strongly demand the government to enhance control in the electricity market, so as to restrict all types of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I also demand that the government takes immediate and forceful action to prevent the use of illegal, high polluting diesel fuels and badly maintained engines, and to reduce the amount of unnecessary vehicle trips. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those unable to achieve the caps should have the rate of return mandatorily reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up.
7. Stronger enforcement of vehicle emission laws should be introduced.

This issue is surely the most important issue facing Hong Kong at this time. Not only is the current situation damaging to the health of the citizens, it is also damaging to the economy. I cordially urge the SAR government to bring back blue skies and clean, fresh air.

I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: My viewpoint on Stg II Public Consultation on Future Development
of the Electricity Market
☐ Urgent ☐

Dear Sir,

The proposed post-2008 regulatory regime for local electricity utilities becomes a hot topic covered by various mass media.

As a Hong Kong citizen, I would like to share my viewpoint.

Learnings from the major blackout in North America, consumers start to realise that the low tariff is not the only one element to consider, but also the reliability of supply places an utmost important factor in considering what sort of market environment should the electricity utilities be adopted.

Hong Kong positions herself as the international financial and services centres. The positioning could not succeed without a reliable supply of electricity at an affordable tariff. Currently, under the SoC, both power companies CLP Power and Hong Kong Electric operate with a track-record of world-wide best reliable supply performance. This could only be achieved with well proven regulatory system and effectively implemented and monitored. The current mechanism serves well to ensure investors have a reasonable return while consumers enjoy reliable supply at an affordable tariff. This is a Win-Win deal

In summary, I oppose any change in current SoC arrangement and advise the Administratives do not change for sake of change and do not lose the big picture of future Hong Kong's prosperity in meeting the short term political agenda from the pressure groups and politicians

Best regards

David W K Lai

Subject: view on the development of electricity market - Stage 2 consultation

☐ Urgent ☐ Return Receipt

Dear

After reading the consultation paper of stage 1, I strongly agree to introduce financial incentive mechanism on the effort that the power companies put on environmental protection like the measures of energy conservation, reduce the emission, use of RE. I think it is the most effective way to "induce" the power companies to conserve the resources and avoid to harm our environment.

Rgds,
Davis Ho

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

31 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Sir,

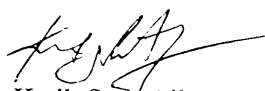

Comments on Stage II Consultation on
Future Development of the Electricity Market in Hong Kong

We are a financial institution operating in Hong Kong. As power supply reliability is very important to our operations, we would like to provide our views on a few issues related to the future development of the electricity market in Hong Kong:

- (1) Supply reliability is essential and must not be compromised – Hong Kong enjoys a reliable and uninterrupted electricity supply which has helped secure its role as a financial centre. Any change to the existing system which has to-date worked well should be very carefully considered. It would negatively impact our operations if this reliability was compromised.
- (2) Sufficient financial incentives should be provided – Reliability comes at a cost. Sufficient and continuous investment in electricity infrastructure, which depends mostly on the financial incentives offered to the utilities, is the key to achieving reliable power supply. Perhaps the government should consider appropriate incentives or support to encourage the investments to ensure reliability.
- (3) The Regulatory period should be sufficiently long. A longer period than the 10 year regulatory period being proposed would encourage investment by the power companies.
- (4) To maintain Hong Kong's competitive edge as a world class and regional financial centre we need to be ahead of our competitors and we cannot afford to have an unreliable power supply.

We would appreciate that you could consider our views.

Yours truly,

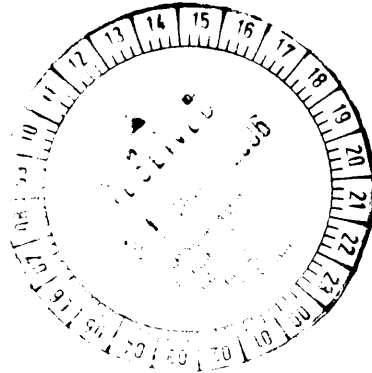

Kwik Sam Aik
General Manager

March 29, 2006

Economic Development and Labour Bureau
21/F Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Sirs,

**Re : Future Development of the Electricity Market in Hong Kong**

As a financial institution daily in contact with and advising many institutional and individual investors, we are alert to the potential impact on the financial market of any major change in government policies. Therefore, we watch with intense concern the government's stance on the future of the electricity market of Hong Kong. Having studied the proposals put forward in the Consultation Paper, we would like to draw your attention to our comments on the following aspects:

- 1) It is proposed to lower the current permitted return of 13.5% to 7-11%. Despite the government's claim that Hong Kong's electricity tariffs are among the highest in the world, we would like to point out that they rank on par with OECD countries. Certain cities, like San Francisco and Macau, have even higher rates but nevertheless still suffer frequent power outages. Also, we believe that the higher returns enjoyed by the utilities are well-deserved for the quality of the electricity supply as well as providing the incentives for the two utility companies to invest in a small city like Hong Kong. If the choice of consumers is a relatively higher price for power versus an uninterrupted supply, it is obvious that they would choose the former.
- 2) It is proposed to apply different returns on different assets so as to encourage investment into environmental protection. In our opinion, not only will different ROR's complicate regulatory supervision, it does not necessarily prevent over-investment, which is already being safeguarded under the current regime. Also, we think it will not be in the best contractual spirit to apply such proposed returns retroactively to assets invested before 2008 as shareholders of the two utility companies have a reasonable expectation on the returns on these assets when they made their investments. This has been explicitly discussed in the Consultation Paper. While we believe that environmental protection should be at the top of any government's list of priorities, there are better ways to provide incentive for the private sector to comply.
- 3) It is proposed to link ROR's to achievement of emission caps. In our opinion, this is over-stringent, as we understand that the utility companies cannot meet these emission standards with the existing equipment. It also double-penalises the companies, as there is already a penalty under the Air pollution Control Ordinance. A solution could be something like allowing the utilities companies to upgrade their existing equipment with the same guaranteed return, after which they have to comply with emission caps.

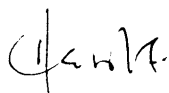

.../2

- 4) The proposal of imposing a 100% penalty on excess capacity is unreasonable. As any investment is already closely scrutinized, any "excess" capacity arising from extraneous factors such as forecast inaccuracy is beyond the companies' control and they should not bear all the responsibility. Naturally, as professionals, they should bear some responsibility. The proposal to shorten the regulatory period to 10 years is unreasonable as it is much shorter than the normal 30 years used for depreciating assets.
- 5) We are concerned with the proposed requirement to seek an approval for every tariff change since other factors (such as political pressure) could affect what is otherwise a legitimate rate change decision.
- 6) On the subject of introducing new electricity supply from the mainland, we believe there are circumstantial factors, which may not deem this feasible. At the moment, CLP is actually supplying power to the mainland. Given the power generating companies are not under Hong Kong's jurisdiction, there are not any guarantees the reliability, environmental impact and costs of such a source of electricity. On the latter, in particular, adding the costs of transmission (longer distances) or additional infrastructures, the resultant tariffs may not be significantly lower than the current tariffs to justify the alternative supply in the first place. Introduction of competition in a monopoly but highly regulated industry should be treated with extreme care.
- 7) Power pooling via increased inter-connection between HKE and CLP has again been proposed. We believe the financial costs of such an endeavour are too high while the benefits are questionable.

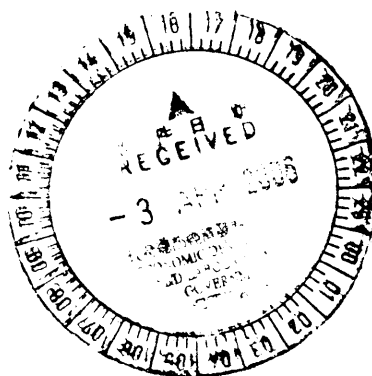

Lastly, we would like to draw to your honourable attention that the two electricity companies, being Hong Kong Electric and CLP Holdings, had provided Hong Kong investors with consistent, safe and handsome investment returns over the years. They are an integral part of the benchmark Hang Seng Index and a cornerstone of the Hong Kong stock market. They have become a core investment for a lot of pensioners as well as investors seeking a safe and steady return, similar to Hong Kong Telephone, before the re-structuring. In our opinion, some of the proposed changes to the Scheme of Control could seriously jeopardize the long-term returns from these companies while potentially affecting the long-term reliability and quality of electricity supply in Hong Kong. Few people stand to win in this situation. It is in this light that we would urge you to reconsider the specific proposals, taking into account of our concerns and worries.

Thank you for your attention.

Yours faithfully,

Alex Yeung
Chief Executive Officer

3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 我要清新空氣

☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Debbie Ng

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

Thank you for letting us know your plans through this round of consultation. Having read the paper I find that it is very weak on reduction of energy demands. A great proportion of Hong Kong's electricity demands are generated from airconditioning and modern building techniques could greatly reduce demand. These are:

- Forcing developers to use double glazed windows
- Central A/C units instead of multiple Window/Split units
- Forcing shops and restaurants to close doors for airconditioned spaces
- Allowing more outdoor restaurants where no A/C is needed

Furthermore, I would like to endorse the comments prepared by friends of the earth:

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

The Government needs to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Future Development of Electricity Market in HK - Stage II Consultation

☐ Urgent ☐ Return Receipt

Dear Sirs,

After reading the Stage II Consultation Paper, as one of the electricity customer in HK Island, I would like to submit my comments as follows.

In a commercial society, it is fair for a company to earn profit on its investment. Of course, as an electricity user, I always want to pay lower electricity tariff. However, the more important factor I consider is the reliability of electricity supply in every life. It would be extremely inconvenient if power failure occur in a busy city like Hong Kong. I have a small kid and live in a high storey apartment like most people do in HK. Electricity is an essential element in everyday life for families like us. Can one imagine how clumsy it would be if in one day you have to take a small kid to walk up a building of 30 storeys in case the lifts are not working due to black-out. In fact, electricity bill constitutes a small portion of the operating expenses of my family when compared with monthly house mortgage and other expenditures like meals, education expenses and clothings, etc..

The current system for electricity companies in Hong Kong has been operating satisfactorily and customers of the 2 electricity power companies in HK have seldom, if never, encountered black-out. Setting a too low rate of return for the power companies will certainly lower the impulse of the power companies to continue their investment in power infrastructure and this will affect the supply reliability in the long run.

In conclusion, to ensure that the electricity reliability will not decline, I urge the government to provide a sufficient and fair rate of return to the power companies. In fact, since the current SCA has been well proven based on historical record in providing Hong Kong a highly reliable supply system, such regime should be retained without any drastic change after 2008.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a longtime Hong Kong resident (18 years), I am pleading with you to do something about our air quality. I now must put prescription drops in my eyes daily due to pollutant irritation. My views of the harbour are so often obscured by layers of smog (not fog!) that it's an embarrassment to invite visitors to our flat.

I strongly urge you to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;

Subject: Consultation Paper on Regulation of the Electricity Market after 2008

☐ Urgent ☐ Return Receipt

30 March 2006

Economic Development and Labour Bureau
2/F Central Government Offices, Main and East Wings
Lower Albert Road
Central
HONG KONG

Dear Sir/Madam

Consultation Paper on Regulation of the Electricity Market after 2008

I understand the Government has released a Consultation Paper on this matter and that the paper proposes extensive changes to the existing arrangements. As a Hong Kong Electric customer, I am worried that some of the proposed changes could lead to a much less reliable service in future.

Weather conditions and population density mean the community in Hong Kong is especially heavily dependent on electricity for air-conditioning, transport and access to high rise buildings. A very reliable supply of electricity at a reasonable cost is therefore important in maintaining our quality of life. It is vital that the Government ensures any changes made to the current regulatory regime will not jeopardize the performance and the high degree of confidence we now have in the electricity supply in Hong Kong.

I therefore suggest the Government:

- YTI Set the rate of return for electricity utilities at a level which ensures current service standards are maintained;
- YTI Not change the 15 year regulatory period; and
- YTI Actively encourage the installation of the most advanced pollution control equipment available, not discourage it (through the proposed lower rates of return).

Thank you for your attention

Yours sincerely

Debra Little
Director, Dialogue Limited

My husband is a chronic asthmatic and has had more respiratory problems each year which the doctors have attributed to the pollution. My son suffers from sinus problems again all due to the pollution. These are daily problems which result in long term medications being used which have short term benefits but I don't want my 9 year old son being on medication all his life because he cannot breathe fresh air. Please do something about it NOW.

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

DELANNOY Eric

31st March, 2006.

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road,
Central, Hong Kong.

Dear Sirs,

Re: Views on Government's Consultation Paper on
The Future Development of the Electricity Market in Hong Kong.

With reference to the Consultation Paper of 30th December, 2005, I would like to express my views:-

1. The Government Policy objective is aiming to ensure that the public can enjoy reliable, safe and efficient energy supply at reasonable prices and to minimize the environmental impact caused by the production and use of energy.
2. For the past years, the two major Power Supplies Companies in Hong Kong have maintained a supply reliability at over 99 %, much better than many major cities in the world. As a user, this is the most important consideration.
3. Electricity tariff is competitive and reasonable in Hong Kong when compared with other major metropolitan cities such as New York, London and Tokyo.
4. When compared with other cities, tariff is more affordable in Hong Kong.
5. The two major Power Supplies have won various Environmental Performance Awards over the past years, showing their effort in environmental protection.
6. Over the years two major Power Supply Companies in Hong Kong have contributed and taken active role in community services.
7. The Regulatory Period of 10 years seems too short for large project. This would not be attractive to investors.

Yours sincerely,

Delia PEI

Lower Albert Road, Central
Hong Kong

Dear Mr. Ip,

Electricity Market Development in Hong Kong
Stage II Consultation

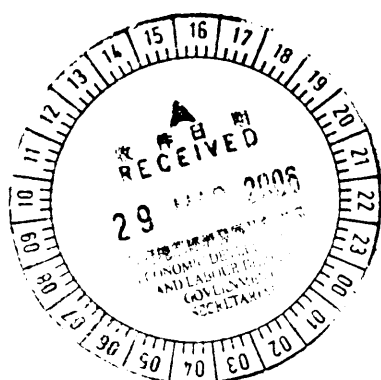

Electricity supply service in Hong Kong is one of the best in the world. Thanks for the current regulatory regime; I am enjoying reliable electricity supply service at reasonable prices. I am very happy with the current level of electricity supply reliability.

As stated by the government, reliability of electricity supply is very important and the focus of the future electricity market development should be focused on maintaining reliability. But, some proposals in the consultation paper such as shortening the regulatory period and reducing permitted return may have some negative impacts on the reliability of electricity supply because shortening the regulatory period means increased risk and reduced permitted return means insufficient incentive to attract investment. Such proposals will deter investment in electricity infrastructure and thus affect electricity supply reliability.

I suggest the Government to evaluate the proposals in the consultation paper with caution, so that Hong Kong will continue to have adequate and reliable electricity supply.

Yours sincerely,

Deng Liang

Lower Albert Road, Central,
Hong Kong.

Dear Mr. Stephen Ip,

Future Development of the Electricity Market in Hong Kong

After reading your Consultation Paper on the captioned subject, I would like to express my views as follows.

As someone who has a very keen interest in the environment in Hong Kong, I am disappointed at the way that the environmental issues are addressed in the Consultation Paper. While the Government would obviously like to attract investment in renewable energy supplies by offering a higher rate of return to investors as a financial incentive, such arrangement can hardly accomplish the desired objective. Put in a practical perspective, renewable energy supplies cannot be a feasible solution to the pollution problem in Hong Kong. On the other hand, emissions reduction facilities have already been proven as a successful approach to tackle pollution. Naturally, a more sensible approach will be to adopt the emissions reduction facilities to the extent possible. And for that to happen, the rate of return should not only be sufficient to attract capital but also non-discriminatory among different asset types.

Yours sincerely,

Denise Lee

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Dennieyuen

Lower Albert Road, Central
Hong Kong

Dear Mr. Ip,

Future Development of the Electricity Market in Hong Kong
- Stage II Consultation

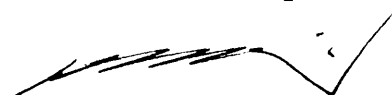

With reference to the Stage II Consultation Paper, I wish to express my opinions on the Government's proposals in the Stage II Consultation Paper.

Government has proposed a shorter 10-year regulatory period in the Stage II Consultation Paper. But the proposed regulatory period fails to reflect the long-term nature of the power industry. With the shorter 10-year regulatory period, there is high probability for the long-life assets to become stranded after the 10-year regulatory period and investment risk for the power companies will be increased.

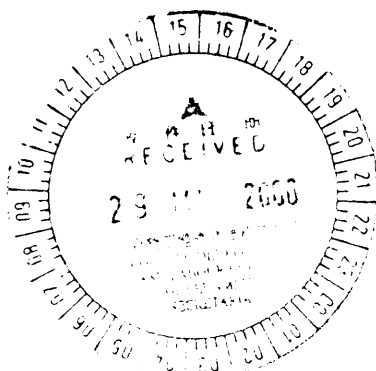

Government has proposed to reduce the permitted return for the power companies from 13.5% to a range of 7-11%. There is no basis given in the Stage II Consultation Paper to explain how the 7-11% rates of return are determined. If the 7-11% rates of return are derived based on the current conditions, have the Government considered that the future conditions (e.g. inflation rate and interest rate) may be very different in the post-2008 period? Moreover, when comparing to the business like property development, the present permitted rate of return of the power companies is considered reasonable. Then, what is the justification to lower the permitted rate of return by 30% to 50% in the Government's proposal?

I wish my opinions can be considered and reflected in the Stage II Consultation.

Yours sincerely,

Dennis Chien

Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Sir,

Stage II Consultation on
Future Development of the Electricity Market in Hong Kong

We are an SME in Hong Kong and power reliability is very important to us and for the economic development of Hong Kong. I wish to offer my views on the future development of the electricity market in Hong Kong as follows:

1. Supply reliability

Experience tells that Hong Kong people have had very reliable power supply for a long time. I could not remember what the world was, or could be, like without electricity. Operating a professional photo studio, electricity is the life and blood of our operation here and I just cannot image going to the office when the computer does not work, or there is no lighting, nor air-conditioning... I don't think the Government should do anything to jeopardise power reliability in HK.

2. Environment

As I live and work in Hong Kong, I agree with actions that will improve on air quality. However, I think it would be naïve for Government to think of solving the problem by asking power companies to share the brunt of the burden in getting a lower rate of return for emissions reduction facilities. This will not solve the problem. If the Government is really serious about improving air quality, it should encourage power companies to do more by giving them the incentives to invest in emission reduction measures.

3. Rate of return

We should not be penalising companies for making a profit, especially as they have been delivering very efficient, reliable and value for money services to Hong Kong. If we want them to continue to invest in Hong Kong, sufficient financial incentives must be provided, by maintaining the existing arrangement.

We hope you would consider our views.

Hong Kong

Dear Sir,

Future Development of the Electricity Market in Hong Kong

For the present consultation on the Future Development of Electricity Market in Hong Kong, I would like to express my views for your reference.

I appreciate that the Government has successfully monitored the two power companies so that a world-class standard of electricity supply reliability could be achieved in Hong Kong. I am in line with the Government that the reliability and safety of electricity supply should be the primary objective in the future development of the electricity market. In the new regulatory regime, it is proposed the permitted rate of return is reduced from 13.5% to a range of 7-11%. For maintaining a reliable electricity supply, I think these rates of return would be too low. Therefore, I would like to advise the Government to consider the permitted rate of return with great caution.

Yours faithfully,

Dennis Lam

**Stage II Consultation Paper On Future Development
Of The Electricity Market In Hong Kong**

Dear Mr. Ip,

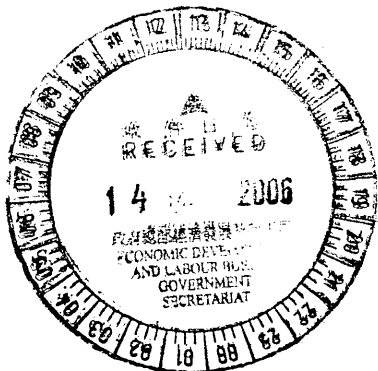

With reference to your Stage II Consultation Paper, I would like to support some of your proposals such as the policy objectives and institutional setup.

However, I would like to make comments on your proposal on Rate of Return (ROR) for your consideration: -

- (a) I do not support your proposal in reducing ROR for the two power companies from the present 13.5% to a range of 7-11%. It is because there are a lot of faults in your proposal. Firstly, there is no sound basis or justification to adopt the range of 7-11%.
- (b) With insufficient ROR given to the power companies, the enormous and long-term investment, which is required by the two power companies, cannot be attracted.
- (c) Feedbacks received in Stage I Consultation were overwhelmingly in support of a reliable and safe electricity supply. If there are no adequate incentives given to investors, how can we maintain a world-class electric network in Hong Kong? By reducing the ROR, how can your policy objectives be achieved to maintain high reliability and safety of electricity supply in Hong Kong? We do not want power shortage or a total system blackout in Hong Kong.

Yours sincerely,

Dennis

Subject: Electricity Market Consultation

☐ Urgent ☐ Return Receipt

Dear Sir

I would like to submit my comments as attached.

Rgds

SOC Consultation.doc

20 March, 2006

Economic Development & Labour Bureau,
2/F Central Government Offices,
Main & East Wings, Lower Albert Road, Central
Hong Kong
(email : electricitycommentstage2@edlb.gov.hk)

Dear Sir,

Being an investment management professional by training, I would like to submit my opinions on the future electricity market development from that aspect.

The investigation on the North America blackout found that lack of investment incentive was a major cause leading to the equipment aging. Therefore, I **object** your proposed Scheme of Control Agreement (SCA), due to inherent disincentives to investors, as detailed below:

1. **Reserve capacity should not carry a lower permitted return:** it is highly unreasonable because the capital expenditures of the power companies are approved by the Government beforehand. Power companies should not be penalized for any forecast accuracy. In fact, investment community often regards “the only certain thing about forecast is it is wrong!” From an investor’s perspective, the investment has been made and if the spirit of the SCA is honoured, appropriate return should be allowed.
2. **Criteria for approval on tariff increase should be clearly stated upfront:** this causes uncertainty on the earnings of the power companies. Lenders and investors would naturally demand a higher return to compensate such risks. The higher costs of capital/financings will eventually be passed to the public. There is also a risk that tariff may become a political tool to subsidize other commercial sectors, as seen in China during the last few years.
3. **Duration of SCA should not be less than 15 years:** the proposed “10+5 years” duration carries uncertainty to the investors, who naturally demand a higher return. Besides, with a shorter payback period, investors try to fully recover the investments within first 10 years, equates to a higher required return on investment. It in turn puts pressure on tariff.
4. **All power suppliers should be subject to same regulation:** it is difficult to understand why the environmental regulation only applies to the 2 local power companies only. A supplier across the border can gain advantage by selling power generated from unregulated sources to Hong Kong. It is also questionable if Hong Kong can achieve its environmental objectives through such inequitable processes.
5. **Returns should not be different for assets:** investors have to bear the political and economic risks of Hong Kong and therefore Government has to justify why generating, transmission and distribution assets should carry different returns. For the same token, emission reduction assets and

Renewable Energy assets should also be treated equally. Government should provide incentive, just as what it provides to taxi and min-bus operators to phase out diesel vehicles, to encourage clean energy sources.

In my opinion, the proposed SCA changes carry a very bad precedent in creating an uneven battle field for the players, which is highly inappropriate for the local business environment.

Yours truly

Dennis Yim, CFA

These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Dear sir,

FUTURE DEVELOPMENT THE ELECTRCITY MARKET IN HONG KONG
STAGE II CONSULTATION

I refer to the Consultation Paper and would like to express my views on the proposed 10 years regulatory period with an option to extend for another 5 years.

The current regulatory period is 15 years. It is proposed in the Consultation Paper that the future agreement be on a 10-year term with an option to extend by another five years. The future regulatory period is shorter than the current regulatory period by 5 years.

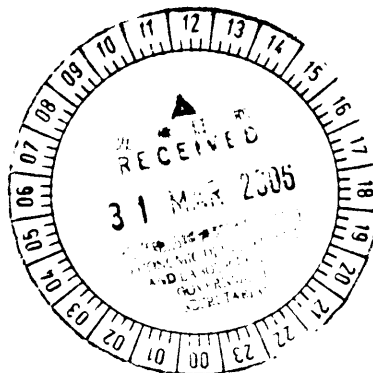

The reduced regulatory period may cause difficulties to the two power companies to plan their future investment: -

- 1) Power industry is a long term nature of investment cycle. In view of the short regulatory period, it may lose the bargain power to their business partners, e.g. coal supplier.
- 2) The long-life assets may probably become void after the regulatory period.
- 3) With such a short regulatory period, the investment risk will increase.

I opine that the regulatory period be remained as 15 years as the current regulatory period does not have any problems.

Yours sincerely,

Derek Chow

Subject: View on Stage II Public Consultation on Future Development of Electricity Market in HK

☐ Urgent ☐ Return Receipt

Dear Sirs,

To enjoy reliable and steady power supply w/o unacceptable/unrecoverable impact to the environment at minimal price is the hope of everyone. However, it's surely difficult to make a balance.

The proposed reduction in guarantee profit and monopoly period will deter investment of the 2 power companies and thus introduce uncertainty to the power reliability in the long run, while the electricity fee may not be dropped as expected by the general public but weaken HK's competing power. For the extraordinarily high and long time investment for power business, it's not attractive if profit below ~10%. Thus change in the current controlling system needs to be smooth and with mutual benefit of the public and the power companies.

On the other hand, power production & reliability in Mailland is not good enough for import to HK yet. Also, the so called renewable energy is only a promotion of green image but not mass production (unless higher technology appears to greatly reduce its price).

In terms of costs of living, it causes more to me from transportation fee, which maintained at v. high level, since economic depression.

Regards,
Derek Fan

Subject: 我要清新空氣

☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港人，我極度關注本港發電廠對空氣與環境所造成的嚴重污染。我強烈要求特區政府對電力市場加強管制發電過程所帶來的各種污染，不要讓電力企業有逃避承擔社會與環境責任的空間。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的污染物排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本絕對不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天和清澈的維港景色，給市民一口清新空氣。

祝好

Subject: Comment on Stage II Consultation Paper

☐ Urgent ☐ Return Receipt

Comment on Stage II Consultation Paper:

In order to have cleaner HK in the future, I would like to point out that Government should do something instead of putting all responsibilities on the electricity companies.

The Government did act well to improve the roadside air pollution index (RSAPI) by introduce unlead petrol, ultra low sulphur diesel (ULSD) and LPG taxi with some kind of sponsor/incentive policies.

But now, the Government do nothing to help to improve the air quality. The Rate of Return (ROR) on Emission Reduction Equipment (ERE) is ranked the lowest which discouraging electricity companies to invest on ERE. The highest ROR is on renewable energy (RE) but the demand is only for 1-2% at 2012 which is properly lower than the electricity demand increment from now up to 2012.

In addition, I hope the Secretary of EDL not to fool HK people about the 3rd electricity company in short term, and not to announce lies to support the fake 3rd electricity company to earn easy money from the share market.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Desti Saint

Dear Sirs,

Re: Consultation Process on Future Development of the Electricity Market in Hong Kong

In response to the current Consultation Process on proposed reforms in the electricity market in Hong Kong, Deutsche Bank would like to register with the Government some of our thoughts on certain issues being discussed, particularly from our perspective as a participant in the Hong Kong financial markets and what we feel are the potential implications that the Consultation Process may have on the Hong Kong utilities sector.

Of the various issues currently being addressed in the Consultation Process, the issue of economic regulation is potentially the most sensitive – specifically, what constitutes “fair and reasonable returns” to the power companies and their shareholders, and which also results in “affordable electricity tariffs for consumers.”

We would like to highlight some thoughts and observations on this and other issues, and provide our perspective for the Government’s consideration:

General thoughts

System reliability and stability – The provision of a reliable and stable source of electricity is essential for any major modern city and is key to sustainable economic growth and development. Any decline in the reliability of Hong Kong electricity market would result in significant economic losses – both from a direct loss of revenue resulting from an event such as a blackout, and from indirect losses at large as a result of reduced public and investor confidence in Hong Kong. We note that Government and a majority of the respondents in Stage I of the Public Consultation have agreed that reliability of the electricity supply to be “of paramount importance and should continue to be the primary objective for the future development of the electricity market.”

Investor confidence – As with any utility type investment, the existence of a strong and stable regulatory framework is essential to attracting and maintaining investor interest and confidence. Any significant adverse and unprecedented changes to a regulatory framework would no doubt

reduce investor confidence in the long-term, and potentially result in reduced infrastructure investments. This is of particular concern in Hong Kong as the Hong Kong electricity reserve margin is expected to fall below the safe margin of 25% by 2010. Investments in the electricity sector are long-term by nature and regulatory certainty is a key cornerstone of such an investment decision.

Track record – Both CLP Holdings and Hongkong Electric have demonstrated a strong commitment to Hong Kong and its customers. For example, despite the current SCA, Hongkong Electric has not fully capitalised on its permitted rates of return in recent years, in large part due to its recognition of the general economic climate over this period.

Deutsche Bank's views

Permitted rate of return – Based on the current proposal, the Government wishes to reduce the allowable rate of return on investments from 13.5% – 15.0% to 7.0 – 11.0%. Given the various arguments and data points that have already presented in the public regarding what is a “fair” return, this letter does not focus on allowed returns – however, we wish to share with the Government the following views:

- (1) Although a majority of the public respondents in Stage I of the Consultation Process had stated that the headline rate of return figures are too high, a majority of those same respondents also noted that they thought that current tariff levels were reasonable.
- (2) Hongkong Electric and CLP Holdings are both privately-owned enterprises which have wide shareholder bases that include a significant number of Hong Kong retail investors. These investors would be disproportionately disadvantaged by any significant reductions in the permitted rate of returns, particularly when compared to the relative gains by consumers.
- (3) Appropriate financial incentives should be presented to the utility companies to improve operating efficiencies, which will benefit both shareholders and ultimately Hong Kong consumers.
- (4) The derivation of the currently proposed new range of permitted rate of returns has not been publicly released and is substantially lower than the previous figures. The derivation and rationale behind this range should be provided in order to stimulate further discussions.

Duration of the agreement – As with most infrastructure and utility businesses, the electricity business is highly capital intensive and requires long pay-back periods. Investors in utilities businesses typically take a long-term view on the cashflows of these businesses, with the regulatory regime forming the key basis for any analysis. The reduction in the duration of the agreement will introduce uncertainty and reduce an investor’s ability to forecast cash flows and value these utility businesses. A transparent regulatory regime with an appropriate duration to reflect the nature of the assets is essential to investment decisions of both the financial investor and to the power companies. The currently proposed annual tariff review mechanism will provide the Government with sufficient flexibility to adjust actual tariff levels should there be a need to. Our view is that reducing the duration of the agreement does not appear to be necessary to achieve the Government’s objectives.

Adjustments to the permitted rate of return – The Stage II Consultation document states that the Government proposes to review the permitted rate of return “every five years to reflect the prevailing economic conditions...” On the basis of our experience in the Eastern Cross Harbour arbitration process (where we acted as Financial Advisor to the Government), in which there was significant contention as to how changes in economic conditions can be quantified, we strongly suggest that a transparent mechanism be adopted to avoid any uncertainties on how changes in “prevailing economic conditions” are determined and in a manner that can be fully and easily quantified in financial terms. Furthermore, any adjustment mechanism should be designed to be easily and practically implementable and in a timely manner.

Varying returns for different types of assets – Given the Government’s stated objectives of protecting the environment and improving the quality of air in Hong Kong, we believe that the proposal for emission reduction facilities to be subjected to the lowest permitted rate of return should be revisited. Our view is that the rate of return for such assets should be subject to higher rates of return to encourage the power companies to invest in such facilities, in order to further reduce emissions to a level beyond the Government’s target. The socio-economic and environmental benefits of reducing emissions to the lowest possible level no doubt outweighs what may possibly be a relatively insignificant financial burden to consumers. This is also particularly important as the highest permitted rate of return is provided for renewable energy sources, despite the fact that Hong Kong is not naturally suited to derive a significant portion of its electricity demand from renewable energy sources.

Implementation, maintenance and monitoring costs – As with any new regulatory frameworks, there will be additional implementation, maintenance and monitoring costs, particularly as the complexity of such frameworks increases. The Government should be mindful of these costs, and weigh each of the proposed changes and their related costs against potential benefits.

The implications of any revision to the Scheme of Control Agreements are far-reaching and will have a long-term impact on both the electricity markets and the Hong Kong economy at large. As such, we would recommend and support further productive discussions between all constituents with a view to ensuring that an optimal regulatory framework is developed.

We hope that you will find our comments above helpful and we would be pleased to further discuss our thoughts with you.

Yours sincerely,

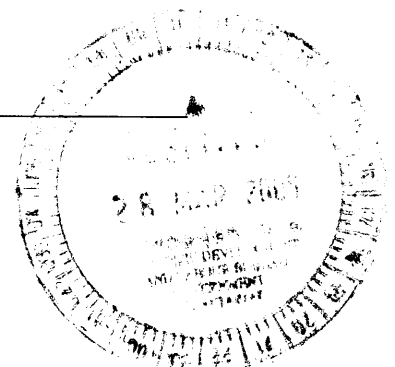

For and on behalf of Deutsche Bank AG, Hong Kong Branch

Subject: 我要清新空氣
☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I HAVE LIVED HERE SINCE 1956. I am very concerned about the air pollution in general and know that much is caused by our own power stations. I expect the Government to take charge and improve the control in air pollution.

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;

2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;

3. The investment in renewable energy should earn a higher level of permitted rate of return;

4. The targets and time-table of reduction in coal burning should be set;

5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;

6. The cooperation in renewable energy development between Guangdong and Hong Kong should be SPEEDED UP, this is URGENT now including the regional blueprint of wind energy development.

I expect the SAR government to prioritise bringing Hong Kong blue sky again and give us cleaner air. We can't control outside pollution from the Mainland factories/cars but at least control on home ground. I look forward to hearing from you.

Yours sincerely, Diana Campion

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Dear Sir,

Comments on Stage II Consultation on
Future Development of the Electricity Market in Hong Kong

We are an international law firm with a substantial commercial practice in Hong Kong. From our Hong Kong offices, we serve a wide range of corporate and individual clients within the Asia Pacific. As power supply reliability is very important to our operations, we would like to provide our views on a few issues related to the future development of the electricity market in Hong Kong.

We have divided our comments into two sections. The first deals with the broader issues we perceive for the business community in Hong Kong and the second addresses the operational impact of the proposed changes on *our* business in Hong Kong (from a perspective that similar changes elsewhere in the world have impacted our business).

1. Broader Issues

As a consumer, we are inevitably pleased that the aims of the government to ensure that consumers receive reliable, safe and efficient electricity supply at reasonable prices whilst minimising the environmental impact caused by the generation and use of electricity are clearly stated. We consider that the Scheme of Control Agreements have achieved the majority of these aims and have been a key building block of Hong Kong's success and stability.

Our primary concern (from our experiences) is that an unintended consequence of the implementation of the Stage II Consultation may be to trade that stability for volatility in both supply and pricing. It appears to us that some of the issues which have affected markets in Europe, United States and elsewhere are present in the current proposals - notably a mismatch between rates of return for certain assets and consumer tariffs and the ability to make long term investment decisions for the utility which must be paramount to security of supply- bluntly that security is worth more to our business and the community as a whole than any changes which might have a short to medium (not long) term effect of reducing prices.

This is not to say that Hong Kong would face the kind of power interruptions, stranded investments, spikes in prices, disincentives to long term investment and ultimate state rescue of the industry that have been encountered elsewhere but similar problems could be created under the current proposals in the Hong Kong and wider

Guangdong economies. That concern is, of itself, sufficient reason to carefully reconsider and test the current proposals.

We support the aims of harnessing market forces to deliver enhanced value to customers (being a customer ourselves). However, we fear that the proposals in the Stage II Consultation could be implemented too rapidly with the result that the merits of the current system (security of supply, price stability and incentives for long term investment in infrastructure) may actually be seriously undermined. We would like you to recognise that the current system is actually effective. It broadly delivers the benefits and goals you seek and far from changing it, the better (and much cheaper) option is to work with the utilities to deliver the goals and objectives within the current system - this must be possible.

There are also environmental issues which we must, as a community, address. However we question whether the Stage II Consultation will, on environmental issues in particular, incentivise the kind of investment required to improve, for example, air quality in the region. In particular the proposals with regard to Renewable Energy appear to escalate and prioritise its connection/access to the grids of the two power companies over other new sources of energy but such connectivity brings with it all the issues associated with security of supply that would apply to other less polluting sources. Whilst we appreciate that the environment is a key issue the fundamental challenges in respect of grid security apply irrespective of the source of power.

We set out below some of the subordinate issues which we would like to see reconsidered in the current Stage II Consultation proposals:

Permitted Rates of Return

We consider that the reduction and scaling of the permitted rates of return under the existing Scheme of Control Agreements would act as a disincentive to maintain adequate levels of infrastructure development and improvement. This consequence is especially important in relation to the changes in the methods of electricity generation required to satisfy the growing environmental lobby within Hong Kong.

We are also concerned that analysing rates of return against different types of asset - which is a significant change from the Average Net Fixed Asset (ANFA) approach currently contained within the Scheme of Control Agreements - will be overly complex and removes the ability of the provider to finance their business holistically. That aspect of the proposal alone will create a significant administrative, logistic and financial burden on providers which we do not think will be outweighed by any perceived benefits. Eventually, that burden (even in an unbundled approach) will find its way to us as a consumer as it has elsewhere. Rather we would prefer the existing mechanisms are used to protect our interests as consumers.

Notwithstanding our general concerns on the overall approach to rates of return, we also disagree with the proposed hierarchy of rates of return indicated by the Stage II Consultation given the broader aims stated within it. For example, if new suppliers (be they renewable, conventional or nuclear) from the Mainland are to be encouraged to supply Hong Kong there will likely be significant costs associated with ensuring that transmission and distribution assets are capable of dealing with enhanced connectivity. If a disaggregated approach to permitted rates of return is adopted then

at the very least this should reflect the costs of implementation and prioritisation of the wider aims of the Stage II Consultation. That said, we note the Stage II Consultation recognises that its approach "...is not without problems..." and trust that further consideration will be given to these fundamental issues and, in particular, the interrelationship between permitted rates of return, the overall regulatory aims of Government and how these are ultimately reflected in tariffs paid by consumers.

Capacity Management

We suspect that the proposals on capacity management may operate as a disincentive to prudent development of the supply side unduly penalising generators for installing excess capacity whilst still requiring them to ensure security of supply. We are also concerned that the two existing providers may be required to enter into arrangements with regard to connectivity and capacity management which do not adequately recognise the different bases (investment profiles, debt/equity funding of assets) of their respective and quite separate businesses. We note that the Stage II Consultation recognises that this aspiration will require further detailed work and analysis. It cannot be in our interests as consumers to see a system imposed which we believe will fundamentally affect security of supply - in all likelihood businesses will recognise these risks and have to invest themselves in back-up plant which will significantly increase costs to businesses and potentially lead to investors looking at alternative locations.

2. Operational Impact

We work in a highly competitive environment where clients expect and are delivered the highest quality legal services. Put simply, we cannot offer the quality of service that we do without a reliable and uninterrupted supply of electricity.

We value the stability that the Scheme of Control Agreements have provided to the business community in Hong Kong over the last forty years or so. Indeed, we view them as part of the bedrock of Hong Kong's economic success. In particular, the duopoly suppliers have created world class emergency response methodologies which underpin the security of supply we currently enjoy - they can do so because they remain vertically integrated and can subsidise their emergency response systems through the prices charged to us and other consumers. Importantly, we are not overcharged for our electricity and there already exists good legislative and regulatory controls to ensure we are not in the future.

If the Stage II Consultation proposals were implemented we would have to consider very carefully the risks of suffering interruption in supply and put in place additional disaster recovery and business continuity measures to enable us to continue trading through any period of interruption. This may involve resourcing work from other offices, installation of back-up generators and enhanced IT back-up systems to ensure that data can be protected. All of this risk mitigation activity would come at a cost. Under the current proposals the choice we would face is one of either:

- ignoring the risks of interruption to supply and/or volatility in pricing; or
- mitigating these risks as best we can and accepting the additional costs of so doing.

As a prudent and responsible business we would develop a robust risk mitigation strategy. However whether we could, or indeed would want to (in such a competitive market), pass the cost of this additional overhead onto our clients is debateable. The benefit of business continuity/disaster recovery strategies is only really felt when a major risk actually materialises. Having taken the prudent course of action (based on similar developments elsewhere) and mitigated these risks, we may find ourselves in a less competitive position than our peers who ignore the risks but who would find themselves unable to deliver in the event of a crisis. The unintended consequence (even if we ourselves successfully mitigate the perceived risks) may be that we remain unable to transact business due to the lack of foresight of those less prudent than ourselves. These kinds of issues are not unique to a law firm - all sophisticated providers of services whether public or private sector (from hospitals to air traffic controllers) in the Hong Kong area will face the same dilemma.

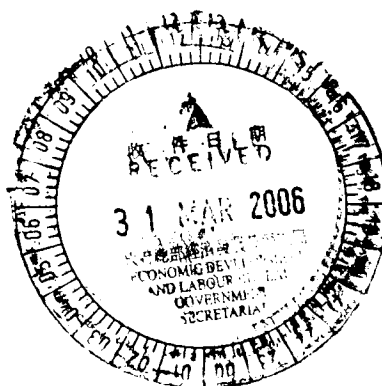

As well as being an operational risk for our business, we would also find ourselves having to advise clients conducting business in the region on appropriate risk mitigation strategies in their own commercial arrangements, as counterparties will seek to allocate the risk of interruption and hedge against price volatility within their legal agreements. Although we could clearly charge for these additional legal services we view them as a further unintended consequence of the Stage II Consultation which may undermine the overall attractiveness of the region for business. Businesses who already face intense global competition may find themselves devoting valuable time and resources which could have been deployed elsewhere to addressing these risks. If an orderly market in power supply is a "given" then this is much less of an issue for business.

We hope that EDLB will carefully consider the points we raise above and keep any changes to the present regulatory regime and electricity industry to a minimum. If we can be of any further assistance we would be delighted to contribute further to your deliberations.

Yours faithfully,

Subject: 香港電力市場未來的發展第二階段諮詢

☐ Urgent ☐ Return Receipt

香港中環下亞厘畢道
中區政府合署中及東座二樓
香港特別行政區政府
經濟發展及勞工局

[\(electricitycommentstage2@edlb.gov.hk\)](mailto:electricitycommentstage2@edlb.gov.hk)

香港電力市場未來的發展第二階段諮詢

本人同意政府提出的政策目標是要確保公眾能夠以合理的價格，享用可靠、安全及有效率的能源供應，並致力將生產和使用能源對環境所造成的影響減至最低。本人有以下意見：

諮詢文件中建議降低准許投資回報率至7% - 11%是大眾所想，本人認為仍須小心考慮處理，因為若然回報率定在不適當的水平，將會引致投資不足，從而影響供電問題，更需長時間才能修正，公眾因而須承受投資不足所帶來的風險及影響，更令社會及經濟發展帶來沉重代價。

諮詢文件中建議未來的協議年期縮短至十年及視乎情況續期多五年，本人推想原意是預留彈性，以容許適當的改動；但認為此建議須小心考慮處理，因電力資產壽命長達30年以上、長期的燃料供應合約年期亦長達20年以上，所以電力行業的規管年期須能合理反映有關特質及風險。否則，將會令投資意欲銳減，使電力市場的發展帶來深遠影響。

最後，希望香港電力市場有健康的發展。謝謝！

Dick

Subject: My opinions on the consultation on Future Development of the Electricity Market

☐ Urgent ☐ Return Receipt

Dear Sir/Madam,

Refer to the consultation, I would like to express some of my opinion for the Hong Kong future Electricity Market Development.

As a HK citizen living in Kowloon urban area, I'm looking for reliable and safe power supply to maintain the quality of life and living comfort for my family in acceptable tariffs. Up to this moment, I think the power companies have done the good job in cost effective way.

In order to maintain the power quality and thoughtful planning in facilities development in network for our city, I think there is no more space to have a major power sector reform in the structure owing to the limited size of power market.

As a electricity consumer in HK, I hope the power companies can maintain their world-class electricity supply for supporting our city economy and living standard.

Best regards

Dick Au

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Subject: Response to Consultation Paper on Future Development of the
Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

Old photos of Hong Kong mirror my childhood memories showing Hong Kong with clear blue skies and rows upon rows of green mountains disappearing into the distance. Today, we are lucky to be able to see across the harbour.

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

Subject: 我要清新空氣
☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

2/F, Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Mr Stephen S.K. Ip,

Stage II Consultation Paper

I feel uncomfortable after reading the consultation paper that introducing new market players is over-emphasized.

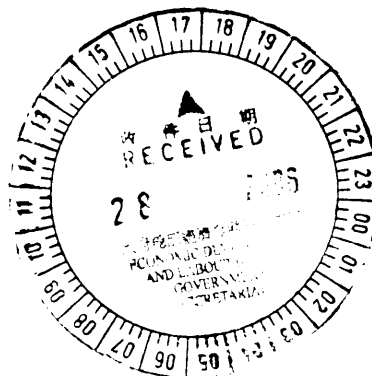

Firstly, can Hong Kong's electricity market be able to open for competition? I don't think so. All generating facilities are privately owned. Will power companies be willing to give up their property right for the implementation of grid access, which is a prerequisite for meaningful competition? Through legislation to mandate the access is just an indication of government intrusion in free market. Can Hong Kong government bear the consequence of that intrusion?

Secondly, even the market can be opened, would the consumers benefit from the so-called competition? I don't think so as well. Relying on China's import as new supplier is not realistic due to their tight supply-demand situation in the foreseeable future. Our supply reliability that we are enjoying now may also be deteriorated from this import. In addition, it is no guarantee that the tariff can be lowered significantly.

I fully support the policy objective adopted by the government but I hope our government can be a realistic one instead of providing too many false hopes to the public in formulating the future electricity market.

Yours sincerely,

Diggy Mok

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

I have lived in Hong Kong for over 10 years and am now very much saddened by the amount of pollution and the Governments complacency in dealing with this. It is making Hong Kong uncompetitive as an International city as it is becoming a less attractive place to live as residents are now searching for other places to retire or invest in in the long term as if this is now imagine 5 - 10 years - it will be as bad as cities in China where pollution sticks to you as soon as one walks out the door - I thought Hong Kong had more pride?

The continuous blaming on China is simply sidestepping the real issue of what are we doing in Hong Kong . How about reducing LPG to encourage and incentivize taxi drivers to use this gas and taxing diesel to disincentivize its usage. I am sure the monopolistic bus companies can pay this tax, and the power stations should also be taxed heavily if they do not see fit to reduce emissions and change to cleaner air filtration systems - surely tax incentive and disincentives could be used to allow us to breathe a little more.

If nothing else do it for the children for those where the asthma rates in Hong Kong children are rising by 15-20% per year because it is better for no one to take responsibility for this rather than find a proactive solution.

It is sad to see a great city lose its power and privilege to be ranked amongst the best in the world to become one of the most polluted in the world because no one could have the courage to make those responsible care enough to make the change.

A concerned citizen who is being forced to leave this fair city within the next 5 years.

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

28 March 2006

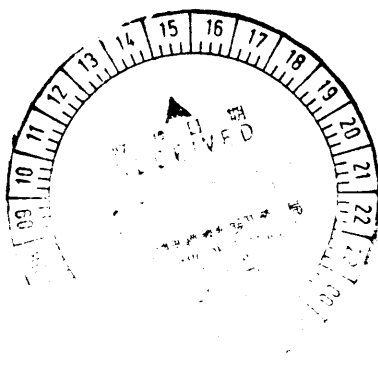

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road, Central,
Hong Kong.

Dear Mr. Ip,

Stage II Consultation on Future Development of the Electricity Market

In response to the "Consultation Paper on Future Development of the Electricity Market in Hong Kong - Stage II Consultation", I have the following points to make:

1. People in Hong Kong today are enjoying a highly reliable power supply provided by the power companies and it is expected this will continue in the future.
2. Government's proposals which would make the power companies reduce their investments in their facilities should be abandoned as the reliability of power supply in the future would be affected. In particular, the proposal to shorten the period for the agreements signed between the government and the power companies and the proposal to reduce the rate of return of the power companies should be dropped as they vastly increase the investment risks of the power companies and the power companies would stop investing in their facilities.
3. A stable and reliable electricity supply is essential in keeping Hong Kong's image as a metropolitan city. In defining the regulations for the post-2008 regime, the government should provide enough incentives for the power companies to invest in the future.

Yours faithfully,

Dominic Lai

Subject: Re: Future Development of the Electricity Market in Hong Kong 每
Stage II Public Consultation 販誠?薯序 帑 腔追程 每 菴媪蕙僂
鼠?烷?
☐ Urgent ☐ Return Receipt

Dear Sir,

Referring to the Consultation Paper on Future Development of the Electricity Market in Hong Kong Stage II Public Consultation, I would like to express my views on some of the proposals as follows:

1. 10-year regulatory period with an option to extend for another 5 years.

This proposal is unreasonable as it ignores the long term nature of the investment cycle and contractual commitments exclusively to power industry and high probability for the long-life assets to become stranded after the regulatory period. Such changes would discourage investment which may eventually jeopardise supply security and reliability. The existing 15-year regulatory period should be retained.

2. Bilateral agreement between the Government and the power companies

I support this proposal as it is simple and easy to implement, requires low governance costs and has proven effective from past record.

3. ROR reduced from the present 13.5% to a range of 7-11%

There is no justification nor basis for 7-11%. For the particular nature of power industry, it appears the proposed ROR is on low side. The proposed ROR is unreasonable and may lead to insufficient investment which will undermine the supply reliability. The Government should treat this issue carefully and determine a reasonable ROR by making reference to other similar investments.

4. Supply from the Mainland

Supply situation in Guangdong remains very tight and may jeopardize the supply reliability in Hong Kong. It also blur the responsibility to ensure adequate and reliable electricity supply. In addition, there will be loss of job opportunity to Hong Kong. I do not support this proposal

Dear Sir,

Electricity Market in HK - Stage II Consultation

I am writing to object the proposal of reducing the duration of the regime to 10 years as it is unreasonable and ~~non~~ non-attractive for investor to make a long-term investment in power industry.

Yours Sincerely,

Don Chan

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

This year I ran the Hk Marathon and it was really no fun at all afterwards because I had a throat infection due to the pollution in the air. Get this sorted out .

People and companies are leaving HK because of this problem. I want my children to grow up allergy free and be strong, that isn't going to be true if they have to keep breathing such poor air quality. As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. This is not just a local problem or some irritating side-effect of so-called progress, but is at the heart of the ongoing destruction of our planet through the profligate and uncontrolled abuse of fossil fuels. Is anybody in the government taking the slightest bit of notice of the massive amount of evidence accumulating that shows how close the whole world is to catastrophic changes in climate? Does anybody in government care about anything but money? There's certainly no evidence of it. Consequently, I strongly demand the government enhance control in the electricity market, so as to restrict all pollution created by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a much higher level of permitted rate of return;
3. We support RE, but not incineration which generates dioxins and green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of the electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Economic Development & Labour Bureau
2/F., Central Government Offices, Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Mr. Ip,

Stage II Consultation on Electricity Market Future Development

I wonder if the proposals in the consultation paper are good to Hong Kong society as a whole.

Looking at the present figures, supply reliability is very high while the bill is well affordable (only accounts for 1.7% of household expenditure on average as per advertisement on newspaper). It seems to me the present situation is quite optimal.

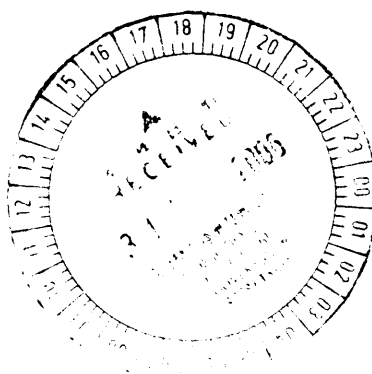

If the Government implements the proposed changes, the present optimal situation will be unavoidably be affected. It is not known at the moment whether the situation will become better or worse. However, one point I am quite sure is that no matter which proposed change is adopted, it will cost tax payers more. Besides, as pointed by the power companies, the future investment in electricity system will be affected if the Government proceeds with the proposed changes. It seems that the situation will become worse.

If the present system works well, why do we need to use more public money to migrate to an unknown or even worse system?

Yours sincerely,

Donald Jeffrey Roberts

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: 香港電力市發展第二階諮詢

☐ Urgent ☐ Return Receipt

經濟發展及勞工局：

香港電力市發展第二階諮詢

本人對政府提出的文件大至上認同對長遠目標定立了好的方向，但其中一些建議更需要詳加考慮，而本人的觀點如下：

香港以管制計劃協議的模式規管香港電力公司的業務。協議沿用至今超過 40 年，其間被定期檢討和修訂，以配合社會的需要。現行制度讓市民長期享用可靠程度高的供電，以及相比其他國際城市相宜的電價。這套制度支持香港的高速都市建設及商業發展。

建議繼續沿用現有行之有效的規管制度，並加進一些新的規管安排，以確保公眾能夠以合理價格，得到可靠、安全及環保的電力供應。建議包括：為新電力供應源作開放電網、加強兩電聯網，以及與廣東省聯網的準備。

政府建議新協議從現在 15 年的年期縮短至 10 年，期滿時可續期 5 年。然而 10 年的協議年期未必能反映電力行業具有高度資本密集、投資項目籌備需時、資產壽命長、燃料供應合約年期亦長達 20 年以上的特質，增加回報風險及窒礙投資。政府為何多此一舉，製造不必要的不明朗因素。若果不將回報釐定在適當水平，公眾便須承受投資不足所帶來的風險，最終會為社會及經濟發展帶來沉重代價。而投資不足的問題更需要長時間才能修正，直接影響供電的質素，我們絕不能短視。

政府在沒有考慮電力公司現存的減排能力下，建議大幅收緊排放標準及引入罰則。然而政府暫時還未有清晰的多元化燃料，如核能、燃煤、天然氣等組合的能源政策，確保香港擁有穩定的燃料供應及互相配合的環保政策。因此在缺乏清晰及互相配合的能源及環保政策下，電力公司將無所適從，較難制定有意義的長遠發展計劃。這不但會窒礙環保投資及扭曲投資決定，亦可能由於胡亂投資而令電費 升，削弱電力行業的持續發展，犧牲社會長遠利益。

建議須兼顧各方長遠利益，當中包括盡量減輕市民的電費負擔、穩定可靠及安全的電力供應、合理的投資回報、合乎成本效益、公平的開放市場、環保能源及經濟政策的協調等，並以香港電力市場的長遠健康發展為重，下列是我有所關注：

- 過渡至開放市場藍圖模糊不清

環保規定未必能配合
協議年期未能反映電力行業投資年期的持特性

- 准許回報未必能吸引投資

此致

24 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices,
Lower Albert Road, Central
Hong Kong

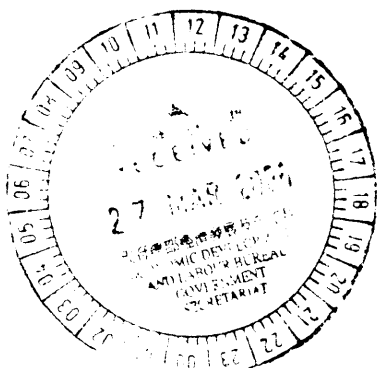

Dear Mr. Secretary,

I would like to express my following views on the Stage 2 Consultation on the future development of the electricity market in Hong Kong.

First of all, I would like to commend the Government for sticking to a bilateral agreement and an asset-based approach for the permitted return calculation. The highly reliable electricity supply that HK has been enjoying for decades is a well-recognized proof for the efficiency and cost-effectiveness of the Scheme of Control regulatory framework.

However, I am sceptical as to whether a much lower permitted rate of return, coupled with a much shorter agreement period, shall suffice to attract investment in the electricity infrastructure. Given the long term and capital intensive nature of the electricity industry, your proposals definitely add risks to the operating environment of the industry. Why should the Government put electricity supply reliability at higher risks by making such proposals?

I sincerely hope the Government can take my above views into consideration when formulating the future regulatory regime for the electricity supply industry.

Yours faithfully,

A handwritten signature in black ink, appearing to read "Doreen Law".

Subject: Future Development of the Electricity Market in Hong Kong Stage II
Consultation

☐ Urgent ☐ Return Receipt

When I read about the suggestion to have new supply sources from Mainland, I personally have very much reservation about their supply reliability and stability. With the high economical growth of the Mainland, their energy demand will remain huge and will not have surplus for Hong Kong, at least in the foreseeable future. Furthermore, if we get supply from the Mainland, then their network will jam into ours, any incidence happened in their side will inevitably affect us, especially we have no jurisdictions on their network and their services level is questionable. I don't want Hong Kong to experience the big 'blackout' as in ! US 2003, just because of a small accident in the transmission line leading to millions of people being affected. Here in Hong Kong locally, we have a well regulated electricity market, guaranteeing a stable supply with reasonable price, I believe we should improve our local investment and local control instead of introducing new supply from the Mainland.

Subject: Comment - Electricity Market of HK Stage 2 Consultation

☐ Urgent ☐ Return Receipt

Dear Sir,

I would like to express my personal views on the environmental related proposals in the Stage 2 Consultation Paper on Electricity Market.

There are many voices in our community in saying that electricity users should not bear the associated pollution cost. I really in doubt of this saying. As noted in the government's proposed policy for the management of municipal solid waste, we have to pay the waste disposal costs while there is no need for the manufacturers of commodities to pay the disposal costs. That is the "user pay" principle.

I would rather consider the same principle should be followed in dealing with electricity. The more electricity we consumed, the more pollution the power companies produced. As the end users of electricity, we should be responsible for paying the cost for reducing pollution from electricity generation! . I think people should be rational and reasonable. Every thing comes with a cost. When you want to have a "cleaner" electricity supply, I would rather in saying that it should be reasonable for the end users to bear the cost of pollution reduction.

Referring to the consultation paper, it seems to me that two electric companies will be "penalized" with a lower return for installing pollution reduction facilities in comparing with other infrastructures. With this proposed return rate, I wonder whether the power companies will be discouraged to do less on pollution reduction in future.

I would be grateful if our government can establish a sound incentive scheme to encourage the electric companies to implement and activate some effective pollution reduction facilities in due course.

Citizen of HKSAR, Doris Chan

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

30/03/2006 17:56

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

dorothy cheng

29 March 2006

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road, Central,
Hong Kong.

Dear Sir,

Consultation Paper on Future Development of the Electricity Market in Hong Kong
(Stage II Consultation)

Regarding the Consultation Paper on Future Development of the Electricity Market in Hong Kong (Stage II Consultation), I would like to express my views as follows:

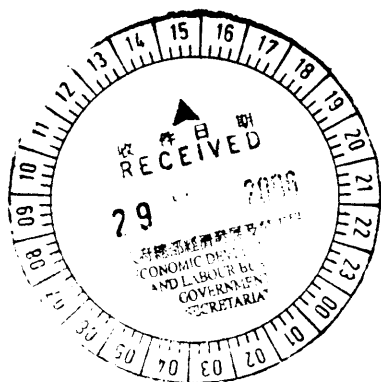

As we all know, in order to provide a safe and efficient infrastructure to supply electricity to their customers, the power companies in Hong Kong have invested heavily in their power supply facilities. Most of the power companies' assets in fact have very long asset life, about thirty years or more. If the Government reduces the power companies' permitted return to 7-11% and shortens the period of the Agreements with the power companies to 10 years, it means that after 2008, the power companies may not be able to earn their permitted returns for the investments they have made. This will greatly reduce the power companies' incentives to continue to invest in the power supply infrastructures. The reliability of power supply in Hong Kong will inevitably be affected which nobody would like to see.

I think the Government should give enough incentive for the power companies to continue to invest in their infrastructures so that the highly reliable power supply in Hong Kong can be sustained.

Yours faithfully,

Dorothy Fung

Dorothy Hon

25 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices, Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Sir,

Future Development of the Electricity Market Development in Hong Kong
Stage II Consultation

In response to the Stage II Consultation Paper, I wish to express my views on the Government's proposals in the Stage II Consultation Paper.

Government has proposed a new rate of return of 7-11%. There is no basis for the Government to lower the permitted rate of returns below the existing level of 13.5%. Government should provide justifications that the new permitted rate of return is fair and sufficient to attract huge and long-term capital investments required by the power companies to maintain the existing high level of reliability of electricity supply. The present 13.5% rate of return for the power companies has been proved that there are adequate incentives to encourage appropriate investment of electricity infrastructure to ensure high reliable electricity supply and good services to the consumers. Therefore, I support to maintain the present 13.5% permitted rate of return in the post-2008 period.

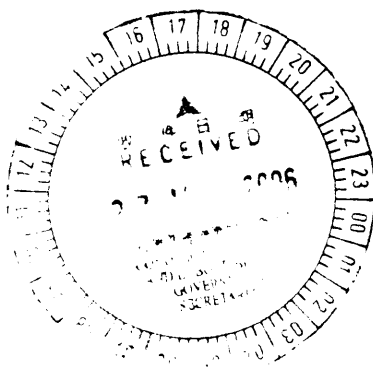

The proposal of Government approval for all tariff adjustments is unreasonable. Power companies should be allowed a reasonable chance to recover their business costs and fair profits on invested capital through their tariffs. If all tariff adjustments are subject to Government's approval, the costs and permitted returns for power companies will be no longer sufficiently protected. It may be subject to undue political pressure, which shall increase risks borne by investors.

I would therefore request the Government to evaluate the proposals more carefully in the Stage II Consultation Paper.

Yours faithfully,

Dorothy Hung

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Electricity Comment Statge 2
☐ Urgent ☐ Return Receipt

Dear Sirs,

I don't agree to short the contract period from 15 years to 10 years and the permitted return reduce from 13.5% to 7-11%. It is because the assets was "too low" and the contract period of 10 years "too short" for the capital-intensive industry with a long payback duration. it is also to discourage investment in emission reduction facilities by fixing the lowest return rate and penalising power firms to failing to meet emission targets. In addition, emission targets were unrealistically stringent and unilaterally set by the government.

The above proposed changes do not reflect rising political and economic risks, which discourage investment and Risk hurting reliability of supply. Besides, many people were also complained that the government was complicating the regulatory regime by fixing different return rates on different types of assets.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

29/03/2006 20:24

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

**Future Development of the Electricity Market in Hong Kong
– Stage 2 Consultation**

I am a factory owner and I run 2 factories – one in Hong Kong and another in Dongguan of China. My factory in Dongguan employs about 1,000 workers and there are about 100 workers in my Hong Kong factory.

I was laughing when I heard about a Chinese company expressing interests to supply electricity to Hong Kong. But I felt sad afterwards, worrying about the HK's future if it comes true.

My factory in Dongguan is still suffering from shortage of supply, which is very irritating as there is supply interruption from the county bureau for 2 days out of every week. Of course the bureau would normally give advance notice, but sometimes would not.

I have complained to the county supply bureau but the answer back is that the supply shortage will persist in the next few years.

This compares contrarily to the situation of my factory in Chaiwan. Here in Hong Kong I am now taking reliable supply for granted. Yet I am paying less here than what I pay in Dongguan!

Please don't let cowboy company to come to mess up the Hong Kong supply market. How can we have the confidence that it can make commitment to serve Hong Kong people?

I have seen tariff comparison in China Light's advertisement and I tend to believe that we are having good value for money electricity services in Hong Kong.

I can show you how much more I am paying when I produce electricity through my 2 diesel

generators (470kW and 550kW) at times when I can no longer afford to rely on supply from the county supply bureau. I pay around RMB1.5 for one unit produced. However I am very uncomfortable to do it because I hate to see a lot of pollution emissions coming from the chimneys of the generators. I can not buy high quality diesel fuel in Dongguan!

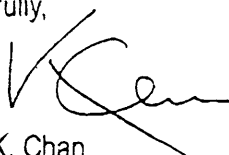

Please do not rock the boat by merely introducing changes to the current control agreement for the sake of satisfying politicians. I would rather prefer to pay a little more (not too much) but not to suffer from poor supply quality and highly pollution.

We need to be conservative rather than to have to say sorry afterwards. Therefore I urge you to seriously think about the following opinions:

- a. Retain the current scheme of control agreement
- b. Extend it to another 15 years (I don't think China is ready before that timeframe)
- c. Retain all the existing terms, only make improvements to minor items that help more efficiency and transparency (but watch out political meddling)
- d. Should not cut the rate of return too drastically (as a businessman and having the experience of running diesel generators, I can understand the huge amount of investments required for this kind of infrastructure); make sure encourage continuous investments
- e. Provide incentive to encourage investments on environmental improvement facilities (I don't know why you have to reduce the return for emissions reduction facilities – it's nonsense! I would rather want to pay a bit more than to let this and next generation to breath bad air)
- f. Drop the idea of varying return to different assets (it's not logical why under the same regulatory regime the generation assets would have any different risk from the wires assets)
- g. Do more homework on how to step-by-step transit to an open electricity market (don't jump over board)
- h. Do not blindly push for the very expensive but unreliable renewable energy in Hong Kong (I have tried a few small wind generators and solar panels in Dongguan but none of them proved cost-effective – payback longer than 50 years!)

Trust the above points help your consultation.

Yours faithfully,

Raymond K. Chan

Subject: 我要清新空氣

☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Response to Stage 2 Consultation Paper

☐ Urgent ☐ Return Receipt

GOVERNMENT OF HONG KONG: I would like to comment on the GOHK's recent Consultation Paper on the Scheme of Control governing the power companies in Hong Kong. I feel several aspects of the GOHK's position need to be seriously reconsidered, including the following:

- * Maximum Rate of Return is too low to encourage investment -- which will jeopardize reliability.
- * 10 Year Term is too short
- * Reliability will be affected if the GOHK proceeds on the path that is set
- * Providing Lowest return for Air Pollution Emission Control is Absolutely Ludicrous -- I had to read that several times and was convinced it had to be a typographical error.

RATE OF RETURN -- The proposed rate of return is not commercially reasonable, and penalizes the companies unnecessarily. To go from 13.5 % (or 15%) to 7% in one action will not encourage other businesses to want to come to Hong Kong for fear that the government will "regulate" them in similar fashion. Hong Kong is proud of being "the freeist economy in the world." Such regulation as proposed in the new Scheme directly and seriously contravenes that position. If there is sense that the rate of return is too high it should be lowered gradually so that the companies have a time to make rational decisions....

TERM IS TOO SHORT -- I agree with the comments of Nicholas Bradbury, a former project finance banker and author of Infrastructure in China, in the 1 March, 2006 The Standard in which Bradbury stated that the proposed shortening of the regime to 10 years plus a five-year extension at the option of the government is not a minor adjustment from the current 15-year term, but a glaring mismatch with the lifespan of power assets. Bradbury noted that infrastructure projects typically require longer concession periods, citing the Daya Bay nuclear plant (20 years), Hopewell's Shajiao C power station (20 years) and MTR Corp's metro systems in Beijing and Shenzhen (30 years) as examples. He explained at length what he considered to be the right way to assess the return on power assets, and concluded that a 10-year concession yields less than half the investment return of a 15-year concession, and that investors would even be discouraged to invest in any new assets since they would achieve a higher return over 10 years at less risk by simply buying US treasury bonds. Finally, he said a 10-year concession would also pose severe problems in relation to fuel supply, especially LNG, which is in tight supply worldwide and contracts are typically 25-year take-or-pay arrangements. Donald Tsang in his policy address stressed the importance of LNG and cleaner fuels to Hong Kong's future. We won't get that if the companies cannot afford to take the risk to commit to the investment necessary to bring it here.

RELIABILITY -- If the companies cannot earn a reasonable return, they may not invest in upgrades, expansion, etc. and reliability of power supply may suffer. I live on the 21st floor of a building in Repulse Bay and work on the 22nd floor of a building in Wanchai. I don't like walking DOWN all the

steps from those floors when there is a fire drill and certainly wouldn't like to walk UP them -- even for a day or an hour or two.

ENVIRONMENT -- It makes NO SENSE to offer the lowest rate of return to environmental projects. Hong Kong air quality is HORRIBLE and people (like leading athletes Mark Williams as reported in last week's SCMP and several families I know personally) are moving out of the SAR due in large measure to poor air quality. The power companies in Hong Kong (as reflected in CLP's ads) have done a LOT in recent years to clean up their facilities. The bad air is coming from the Mainland, and GOHK's path is going to matter matters MUCH WORSE....

Don't short sighted on our future. Work/negotiate in good faith on a regime that is fair and safe for all of us....

Doug Neagli

On Behalf of My Family

Subject: We want clean air!
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Doug Woodring

Subject: Future Development -Electricity Market in HK
☐ Urgent ☐ Return Receipt

Dear Sir,

With reference to the above consultancy study, I would like to provide my personal opinion as below:

1. Supply reliability is most essential and must not be compromised by other factors. Many people take supply reliability for granted and does not appreciate its importance until they suffer severe power outages. Events, which similar to North American Black out, will impose serious hardship in Hong Kong as we have more high-rise buildings which rely more on the lift/elevator services.
2. Sufficient financial incentives must be provided to stimulate continuous investment in electricity infrastructure. Healthy built electricity infrastructure is the vital to achieve reliable power supply. It was seen that the current Scheme of Control, which has been successful for many decades, should be retained with rate of return and regulatory period intact in order to minimize the risk of jeopardize power supply reliability. This is very essential to all commercial sectors of Hong Kong.
3. I understand that a highly reliable power supply is the most essential element to sustain business development and healthy operation of commercial entities. The SCA regime has been proven to be successfully allowing a reliable electricity supply at reasonable cost. I opine that Government should not take any drastic actions in changing the current regulatory framework, which may jeopardize the power supply reliability in Hong Kong.
4. I opine that electricity tariff is money for value as we are enjoying the highly reliable power supply and the excellent customer services. Also, we think the electricity tariffs in Hong Kong are much reasonable and affordable than those in other countries. As electricity cost just constitutes a very small portion of the expenses when compared with rental and other overhead costs.
5. Hong Kong is a financial center and a densely populated city; the high importance of electricity supply reliability cannot be over emphasis. A lower-than-fair rate of return for the power companies will certainly demotivating the electricity companies to continue their investment in power infrastructure, which means degradation of the power supply reliability. As deterioration of power supply reliability could jeopardize the economy of Hong Kong and hence our business environments, we opine that the rate of return and length of SCA period should remain unchanged.

Thank you very much for your attention.

Subject: We want greener energy & bluer sky!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

> The investment in renewable energy should earn a higher level of permitted rate of return;

> The targets and time-table of reduction in coal burning should be set;

> Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;

> The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Douglas Pang

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

Just today the newspaper again reports how bad the pollution is in Hong Kong, how the elderly are suffering because of it. More and more children, who have no family history of it, are now developing asthma and other respiratory problems due partly to air pollution. We call ourselves a world city, a tourist attraction, a cosmopolitan city that people from all over the world pay money to visit. We pride ourselves on the infamous HK skyline that much money has gone into to make it more attractive, e.g. the light shows, the lights on the buildings, etc; yet who can see it? In this smog that seems more and more to linger for longer over our city, who can see the skyline from the main tourist attractions in Hong Kong such as the Peak? The harbour-front?

Therefore, as a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: STAGE II PUBLIC CONSULTATION ON FUTURE
DEVELOPMENT OF THE ELECTRICITY MARKET

☐ Urgent ☐ Return Receipt

I was born in Hong Kong and have migrated to Melbourne, Australia since 1994.

While I was in Hong Kong, electricity supply has never been a problem. We enjoyed the secure supply of electricity at an affordable rate and have taken this as a norm in life. Things changed after my migration to Australia, especially upon the introduction of privatization and competition in the past years. In the area while we live, which is within a relatively prestige district, we have been worrying about disruption of electricity supply in stormy nights and hot days. Outage is not unusual, and occurs about twice a month in average and could last for a few hours. Thereafter, we need to reset every electrical appliance and computer. Not only will the life of these appliances be shortened, you can also imagine the inconvenience it caused! Moreover, electricity prices have been constantly on the upward trend, and this was still so after the introduction of privatization and competition. How I treasure the old days when we could enjoy the secure and reliable electricity supply when we were in Hong Kong at an affordable rate!

From my friends who work in the electricity company in Victoria, Australia, I understand that they plan the electricity output well in excess of the installed capacity, mainly due to the lack of incentive to invest on modern equipment. Profit always comes first, instead of supply security. As a result, the customers suffer. As the equipments get old, I really cannot rule out the occurrence of a massive blackout here in Victoria, like those in California and New Zealand.

Hong Kong is our home and our next generation could well come back to work and contribute to the success of Hong Kong. We don't want to see insecure supply of electricity in Hong Kong.

All in all, electricity tariff in Hong Kong has been modest even amongst modern cities. There needs to be a mechanism for control on the tariff, of course, but a realistic and reasonable balance has to be strived amongst service level, reliability of supply, pollution level and price. Given the excellent record in the past which contributed to the success of Hong Kong, Government should try to maintain the status quo as much as possible, while encouraging on a greener fuel than coal. Customers should be willing to pay a little more to enjoy fresh air, although it is yet to be established whether the main source of air pollution should be coming from Hong Kong or China!

A clear and reasonable guideline is really needed for the electricity companies to plan ahead over the future investment. I sincerely hope that the power companies are thoroughly consulted on all aspects of possible changes in the rules of the game, rather than maintaining the current risky relationship. Communication is always the key to avoid misunderstanding and the tool towards agreement.

If it is a good system, please do not change just for the sake of change!

Be liberal, and listen to views of all interested parties. I'm sure there must be a good compromise at the end of the day.

Regards,

Elsie Chan

Dr Elsie S K Chan

Stage II Consultation

The Importance of System-wide Protection in Power Systems

My comment to the open market is that the state of art of system wide protection is not yet mature and there is a danger of black out or major brown out.

Majority of the blackouts in the world was related or linked with power system protection.

Protection in power system is currently only designed for power system components (transformer, feeder, busbar) and system-wide protection is very limited.

With the development of large interconnected systems, a new protection technology called system-wide adaptive protection is required. For the past few years, there were some development in Adaptive Protection but the research outcome is still not yet confidently applied to meet the dynamic changing nature of the power system networks. It is particularly true when the network is shared by a number of utilities.

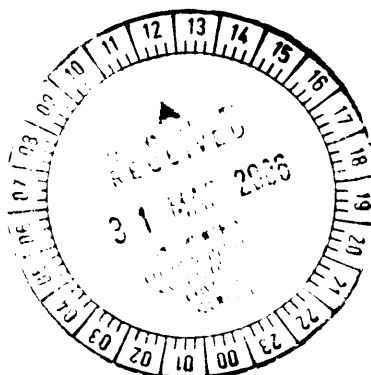

Without this system-wide protection, there is a possibility that large blackout cannot be eliminated. With system-wide protection, the decoupling points can be selected and changed to suit different generation, load flow and different network configuration. A simple example is for decoupling scheme as applied to the interconnector where power flow can be two ways between two systems.

My conclusion is that for large interconnected system, the required protection technology is still in the research stage and blackout cannot be ruled out without the system-wide protection. We must be careful in an open market power system.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

I'm an expat, a professional, a mother who has made Hong Kong her home. I've lived in HK for over 13 years. I teach at one of the universities here in HK and believe that the Government and the people of Hong Kong definitely have a treasure and something to be proud about with respect to the culture, the traditions, the scenery, architecture, attractions and more. However, I fear for the future and have considered leaving what is my home due to the harmful and intrusive effect of pollution here in HK. My children are very young and I would like them to grow up in a place where they can see the sky and the stars at night, rather than just hear or read about

'what it used to/should be like'.

Please take some positive action here in HK and with members of the Special Economic Region and the PRC to change for the benefit of mankind!

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and

Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Yaumatei,
Kowloon,
Hong Kong.

18 March 2006

Mr. Ip Shu Kwan
Secretary for Economic Development and Labour Bureau
Economic Development and Labour Bureau
2/F., Central Government Offices, Main & East Wings,
Lower Albert Road, Central,
Hong Kong.

Dear Mr. Ip,

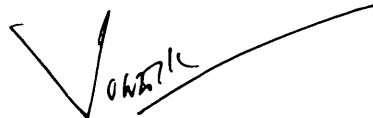

Future Development of the Electricity Market in Hong Kong
Stage II Consultation

We are a well-established doctor panel group in Hong Kong. Since reliable electricity supply is vital to us for providing medical services to our customers, we would like to express our views on the Stage II Consultation proposals.

In the Stage II Consultation paper, the government proposes to tighten the regulatory requirements by reducing the permitted rate of return from 13.5% to 7-11% and shortening the regulatory period from 15 years to 10 years. We are afraid that these proposals will increase the investment risks of the two power companies and disincentivize their long-term investments. Without sufficient investment in electricity infrastructure, we are worrying that the existing electricity supply reliability will deteriorate and power interruptions or electricity blackouts will thus occur in the future.

We hope the government will reconsider their proposals and provide sufficient incentives to the power companies to ensure that adequate long-term investment will be made in electricity infrastructure such that our daily operation will not be affected by power shortages.

Yours faithfully,

DR. FOK KIN CHUNG, JONES

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a physician and as a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Dr. Joseph Yao

Subject: My 2 cents
☐ Urgent ☐ Return Receipt

I have held back in this public dialogue for a while but perhaps it is time I put in my 2 cents.

As a consumer here I have always enjoyed the benefits of a stable and reliable electricity supply. I never have to be concerned about blackout, say, when lightning strikes or during a storm; nor do I have to doubt whether my lights will continue to stay on. Without knowing it, I have taken electricity supply for granted.

Also, I never have to look too hard into my electricity bills here. My family and I have lived in many parts of the world and just about everywhere we lived, electricity costs were higher.

Now tell me what's the problem?

Oh - the agreement our government has with the power companies are expiring and need to be renewed. So time for change...at least that is the perceived logic.

Now, time for me to preach. I have a motto. That is "if it's not broken, don't fix it." That has served me well. I learnt one of my first lessons in my first year of secondary school here. I was in a woodworking class and had to make a wooden box with square corners. I made one that fit its purpose, but decided that round corners would be better for the "feel" and proceeded to file down the corners. The result was disastrous. I became known as "Mr. round corners". Since then, I have learnt to appreciate my motto.

I have also heard war cries to the tune of competition. As I look around, competition seems good for my wallet. The telecom industry seems a good example. Long gone are the days when I had to pay \$\$\$ for my long distance phone bill. However, as a scientist and armchair economist, I am also aware that it may not be competition that is all responsible for driving down costs. Technological advancement usually provides the foundation for cost reduction. Competition, at times, could even have the opposite effects. Case in point. I have been following the trials of Enron lately, and am reminded of the tactics that unscrupulous energy traders used in the California power market - a competitive power market to be precise. A competitive market, if not properly developed, could severely back fire. In California, the results were blackouts and sky-high power prices.

So, what do I think? 1) If the government and the public want to see blood, they can try lowering the return of the power companies somewhat but I would warn against any drastic reduction in case it might cause an equivalent reduction in electricity supply quality. Frankly, reducing 13.5-15% to 7-11% seems too drastic already. This may discourage the power companies so much that they would stop investing here. 2) Economic incentives should be given to initiatives that benefit the environment, such as LNG, emissions control, and renewables. And since these are major investments, sufficient time should be allowed for payback (just like I don't want a mortgage that is shorter than 15 years because of high mortgage payment). 3) Any market opening should be thoroughly understood and planned for.

What is the problem again?

Dr. Lee

Subject: Stage II Consultation Input

☐ Urgent ☐ Return Receipt

Dear Sirs,

I attach herewith my input on the Stage 2 Consultation on the future development of the Hong Kong Electricity Market.

Kindly acknowledge receipt of this email.

Kind regards

Dr. Leung Wai On

Consultation~Electricity~Mar2006[2].doc

Submission in respect of the

Stage II Consultation

on

Future Development of the Electricity Market

in Hong Kong

31 March 2006

By

Dr. Leung Wai On

I am pleased to submit the following input to the Stage II Consultation process, as an electricity consumer on the Hong Kong Island. I believe that the current regulatory regime on the Hong Kong electricity market needs a complete overhaul in the following directions: -

A) Policy Objective

- (i) Opening up of the electricity market for competition will be in the best interest of consumers, as competition will drive down electricity tariff rates.
- (ii) The right of a consumer should be respected. Consistent with the free market economy that Hong Kong always practises, residents in Hong Kong and Kowloon alike should be free to choose their electricity supplier or suppliers. Let consumers have the choice.
- (iii) The opening up of the electricity market for competition will benefit consumers. The current monopoly should be broken up to allow competition between the two incumbent power companies, while new market entrants are welcome to compete.

Protection of the incumbent operators from competition bleeds inefficiency and tolerates fat cats. Thanks to the opening up of the telephone market, we only need to pay a fraction of the cost for a minute of international telephone call comparing with what we had to pay some 6 years ago.

B) New Supply Source

- (i) The geographic boundary between Kowloon/NT, and the Hong Kong Island should be abolished. Incumbent operators and prospective market entrants should be encouraged to compete in the electricity market.
- (ii) The current territory monopoly forbids competition and is the root cause of inefficiency. Consumers currently have to bear the cost of mismanagement that
 - China Light has excessive capacity while Hong Kong Electric is adding more.
 - Likewise, the electricity charge on the Hong Kong Island is 30% higher than that in the Kowloon areas. Why should Hong Kong Island residents be punished with a higher electricity rate?
- (iii) As a first step, the Government should mandate an interconnection between the two incumbent operators. Consumers should be allowed to choose a preferred source of electricity supply from the two incumbent operators and prospective new market entrants.

- (iv) Supply of electricity from alternative sources such as China should be encouraged. In this connection, the Government should provide a level playing field to incumbent and new players alike.
- (v) An interconnection with Guangdong will be a positive step towards alternative sources of supply. An enlarged grid enhances the transmission system stability.

C) Regulatory Arrangements

- (i) To encourage competition, the electricity tariff is proposed to be broken into 3 key cost components, namely,
 - Generation;
 - Transmission; and
 - Distribution.

Consumers will be free to choose their preferred generation source or a distribution network, for cost or availability reasons.

This practice will stipulate interconnection and electricity import to Hong Kong. Import of electricity from multiple sources provides diversity and helps to drive down the costs to consumers. This concept is not new to Hong Kong, as China Light owns the transmission and distribution network while separate Esso/China Light JVs own and operate the power generation plants.

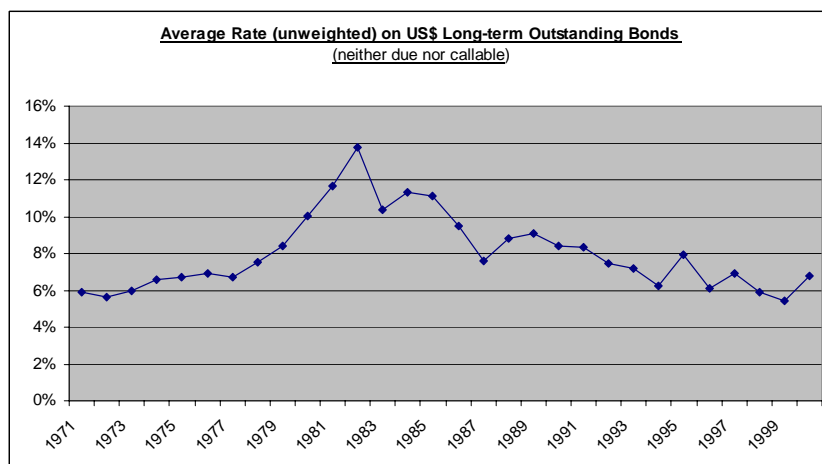

In a transparent process, consumers should be informed of the costs from individual power plants and be allowed to choose the supply source.

There may be practical difficulties in the opening up of the current transmission and distribution network, without the unnecessary nuisance of road digging. Some of these difficulties could be overcome.

I believe many industries or businesses would welcome supply from more than one single source to assure availability, even if that would mean additional investment to connect to two or more power supply and distribution sources.

- (ii) The “Scheme of Control” would only be required when competitions are lacking.
- (iii) The Rate of Return to be permitted under the Scheme of Control (“SOC”) should be determined by : -
 - The rate of return on risk free investment such as long-term US\$ bonds; plus

- An extra percentage to compensate for the business risk on electricity industry investment in Hong Kong. Such percentage would normally be one or two percent, given the guaranteed rate of return under the SOC, the peg of HK\$ to US\$, and the relatively low country risk.

Source: <http://www.forecasts.org/data/data/LTGOVTBD.htm> on 30 March 2006

At the current outlook, I believe that the aggregate rate of return under the SOC should be around 7%.

- (iv) Power plant fuel efficiency is included in the determination of Fuel Clause Account. The power companies should bear the fuel cost when a target fuel efficiency level is not achieved.
- (v) To protect the consumer interest, regular reviews should be made to ensure that: -
 - Power plants and transmission facilities are built ahead of the demand;
 - Efficiency in the use plant and equipment. Idle plants and equipment should have been disposed of and taken out of the asset list; and
 - Road digging and re-digging within a short period of time are eliminated,

In short, the regulatory body must ensure that the investment and assets are used efficiently.

- (vi) Establishment of a Regulatory Body

A regulatory body should be established to regulate the electricity supply market and to protect the consumer interest. The body should comprise of members from the industry, consumers, academics and professionals. The body should be empowered to introduce competition to the industry, ensure

stability of power supply, and protect the best interest of the Hong Kong consumers.

Subject: Stage II Electricity Market Consultation
☐ Urgent ☐ Return Receipt

Dear Sir,

Attached please find my personal views on the captioned subject.

Regards
Dr Shihe Chen

Comments on Second Consultation Paper.doc

Personal Views on Government's Electricity Market Stage II Consultation Paper

1. I support keeping the existing regulatory regime to ensure a reliable power supply and reasonable tariffs to all customers, large or small. A competitive power market benefits only those large customers who have stronger bargaining power.
2. Environmental improvement investment should be encouraged by a higher rate of return to enable the reduction of local emissions with a faster pace.
3. Diversified energy sources (coal, gas, nuclear, etc.) are essential to ensure the supply security and stable tariffs as evidenced in the past years.
4. The equipment life of power industry is normally more than 30 years. The new regulatory agreement should last for at least half of the equipment life, i.e. 15 years.
5. The return rate should not be lower than the existing level to give sufficient incentives for investment in Hong Kong power industry. Without sufficient investment, Hong Kong will suffer from power supply interruption and even total blackout as occurred in USA, Europe, and many other countries in the recent years. Protecting local industry and encouraging local investment are beneficial to the overall Hong Kong society.

The situation has become such that patients and friends have begun leaving Hong Kong. People who can afford it, Expats or not, will not choose to raise their children in an environment which detrimentally affects their health. This is the first time in my 22 years of living here that this has happened. Is Hong Kong returning to the status of a foreign "hardship posting"? I believe we are already too late, but must begin to act immediately to try to reverse things.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Duncan Elliott

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen who has lived here seven years, I am very much concerned about the rapid deterioration in air quality and the pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. While we understand air quality is influenced by China and by other factors, that is not an excuse not to take action locally. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.
