Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Electricity Market Stage II Consultation

☐ Urgent ☐ Return Receipt

Please refer to attached. SOC comment.doc

13 March 2006

The Hon Stephen Ip GBS JP  
Secretary for Economic Development and Labour  
EDLB, 2/F Central Government Offices  
Main & East Wings  
Lower Albert Road  
Central, Hong Kong

Dear Stephen,

**Response to Consultation Paper –  
“Future Development of the Electricity Market in Hong Kong  
Stage II Consultation”**

With reference to the captioned Consultation Paper issued in December 2005, I would like to submit a response to the Paper detailing my view and comments.

**1. New Supply Sources**

As there is no desire to build another generation plant in Hong Kong, sources from Mainland is unavoidable.

Not to mention the insufficiency of electric power in Mainland, the drawing of power from Mainland would push up the price and consumers, especially the industrial ones, would definitely operate their own generators to shed the load during the peak period. As a result, pollution problem would be more and more serious as it would be hard to control the consumers in how to use their own generators.

**2. Renewable Energy**

I personally strongly support renewable energy. However, I have also studied the situation in Hong Kong and found that the natural resources for wind, hydro- and tidal- power are very limited. All those tiny / small plants so far in Hong Kong are only for advertising purposes and they could only generate several hundreds of kWh per year.

In other countries like Japan and German, solar PV cells are seriously promoted. Like the million roof project of Japan, it is very successful with more than a million residential roof were installed with PV cells to generate electricity. Success factor for such project is government policy and tax exemption which helped in the investment cost. Hence, if Hong Kong is promoting the same, instead of putting the burden to the power companies, the Government should also do something (e.g. tax exemption) to lower the high PV cells cost which at present disincentivizes consumers in using them.

**3. Grid Arrangements to cater for New Supply Sources**

If grid connection is for hooking up of renewable energy sources to Hong Kong, I would fully support. But if this is just for preparation of future open market, I would query on the availability of the infrastructure for the open market.

Experiences from UK, Europe, US, Canada and recently Singapore showed that open market have many problems. Success of which also depends on whether there are sufficient players available. I myself is an engineer and am very worried if one day the market opens, Hong Kong has to spend quite a large sum of money developing the infrastructure like the huge computer system to regulate the power-in and power-out and also the employment of very high-cost experts in the legal and finance aspects to handle the electricity supply contracts and to speculate the power market like the one we are doing in the Hang Seng Index market.

To make matter worse, the high cost for such development would not be born by the high consumption consumers who have strong bargaining power to bid down the price; rather, the residential consumers would be those who have to suffer at least 20% increase in the electricity cost in the first 5 to 10 years.

#### 4. Safety Regulation

Existing Electrical Ordinance (Cap 406) is well observed and executed. Thanks to EMSD, the power companies, and the electrical designers and workers, the electrical accidents in Hong Kong are very rare. Hence, I would suggest this good practice be maintained.

#### 5. Environmental Regulation

I am a mountain hiker and I observe in the past ten years the mountain view has been deteriorating and the air pollution has forced me to hike only in the Hong Kong Island.

I am tired to hear from the power companies and the Government on the air pollution issue. Rather, I would like to see if the Government could employ a third party consultant like the Universities to study on how to achieve the low emission requirements (by filtration, or by using different fuel mix) as quoted in the Kyoto Protocol. This study should not only include air pollution from power companies, but include those from vehicles, local emissions and foreign emissions as a whole. The recommendation of this report should show how much investment is needed in order to cut the pollution in the short and long term.

Of course, if the investment cost is too high, we have to seek other ways, may be by tax reduction or a higher permitted return, etc to finance it. Precautions should also be made not to make Hong Kong the top pioneer in the environmental friendly countries ahead of the Northern European countries. Otherwise, all residents of Hong Kong would have to pay very high cost on environment and thus affects its financial situation.

Besides, close monitoring to the pollution of the Pearl River Delta should be carried out and disclosed. As it is no use to limit the pollution in Hong Kong but on the other side receive the pollutants carried to Hong Kong by the northern wind.

## 6. Regulatory Instrument

It is unarguable that bilateral agreements would be the best option and should maintain.

About the length of the agreement, it is worthwhile to study on other major utilities overseas. On the one hand, if the agreement is too short, it would discourage long-term investment which may affect the growth of Hong Kong. On the other hand, if the agreement is too long, it would be inflexible and the Hong Kong people would have to pay high tariff with a high permitted return.

Based on large investment projects like those for Water Supplies Department, 15 years agreement sounds reasonable as the payback period for large investment project normal exceeds ten years.

## 7. Return

To explain this, I would like to use a story.

Once upon a time, there was a hawker who sells bananas. To ensure the best services to his consumers, he employed a team of good Management staff and a team of good workers.

As a result, the bananas he sold were of best quality, sweet, delicious, big; and at the same time cheap. The world ranking of his bananas soon reached top five.

Consumers were all happy with the quality and the price of the bananas and they could rely strongly on the continuous supply. Days came after days, consumers then took it for granted that the hawker should sell good and cheap bananas. To make the matter worse, politicians came and said that the hawker was making a huge sum of money and they should reduce the price.

Eventually, under the huge pressure, the hawker has to reduce the price. But there is no free lunch. With very low profit, the hawker could not keep the good Management team and the good workers. At first, nothing special happened. But some months later, when there were bugs found at the farm and the dry season comes, the hawker could no longer maintain the good quality of the bananas. Consumers complained and complained as they could not have enough bananas. Soon or later, another hawker with good management and good workers came. The price of the

bananas were highest among the world. Yet, consumers have to buy from this hawker as they could not rely on poor bananas.

Hence, as an electricity consumer, what we should concentrate on is the quality, price, environment concerns and we should compare and benchmark these with other countries. We should not just limit the profit made by the electricity companies. All limits on the percentage return 13.5%, etc are therefore meaningless.

## 8. Institutional Setup

At present EDLB is responsible for economic regulation, EMSD for safety regulation and EPD for environmental regulation, while the Energy Advisory Committee for all energy policy related matters.

They all have close monitoring on the performance of the electricity companies in Hong Kong. There is a control mechanism which limits the electricity suppliers from over investing, installing unsafe system, or polluting the environment.

So, why do we still need more additional institution? Does this mean that they are not performing in the past?

## 9. Sustainability

This is a future trend for all companies to adopt renewable energy to sustain the Earth. I strongly support the development of the sustainable strategies in Hong Kong.

Yet, as said before, consideration should be made as Hong Kong is lack of space for wind and hydropower while solar energy is still very costly.

Thank you for your kind attention.

Yours Sincerely,

Ian Lee

Subject: 我要清新空氣  
☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Submission of a Response to the Stage II Consultation of Future  
Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Dear Sir / Madam,

It is our pleasure to submit an IBM's response to the Stage II Consultation of Future Development of the Electricity Market in Hong Kong. Attached please find the subject file. Thank you for your attention.

*(See attached file: SOC Consultation Near to Final.doc)*

Best Regards,  
Dominic Tong  
General Manager, IBM Hong Kong

SOC Consultation Near to Final.doc

March 31, 2006

Economic Development and Labour Bureau  
2/F., Central Government Offices  
Main & East Wings  
Lower Albert Road  
Central  
Hong Kong

Dear Sir/Madam,

**Response to Stage II Consultation of  
Future Development of the Electricity Market in Hong Kong**

IBM China/Hong Kong Limited (IBM) appreciates the opportunity to participate in this consultation on arrangements for assuring energy supply for Hong Kong's business and consumer communities.

It may be useful to first make a few general observations about Hong Kong ' s evolution as a gateway to Asia and China; and secondly, consider some of the issues that frame current discussions; and finally, draw some general conclusions based on Hong Kong ' s track record for forging consensus.

I.

The history of Hong Kong is one of being confronted by challenges and turning them to advantage. Our approach in the past was to take a hard look at realities, discuss our options as plainly as we could see them, agree on a course of action—and then move on the problem with all our energy.

When Hong Kong was inundated by waves of immigrants in the hundreds of thousands a half century ago, we got to work housing them, creating overnight one of the biggest public housing programs the world had known. When geopolitics of the day cut us off from the goods we traded in as an entrepot, Hong Kong became a manufacturing centre in its own right—and again, virtually overnight, we could claim global leadership, or very nearly that, in the manufacture of toys, watches, consumer electronics, textiles, garments and other goods.

.../2

March 31, 2006

We moved just as quickly building a rapid transit system that is still admired as the world's best—20 years after it opened. We created the first territory-wide digital phone network. We migrated our manufacturing to the Mainland and accelerated our drive into services, building and expanding universities and opening up flourishing new towns as we went. We expanded our port and built our new airport at Chek Lap Kok, which—with its surrounding bridges, and road and rail links—became the world's largest infrastructure project undertaken at the time.

Hong Kong had already shown its prowess at the old Kai Tak where, despite being crammed into arguably the smallest space ever occupied by a major international airport, we had built the world's second busiest air cargo center after New York. It was an astonishing feat, if not to Hong Kong people who take challenges in their stride, then at least to the outside world.

We could move at speeds that astonished the world for different reasons. But the first was we were united on our objectives. And the second was we had always made the requisite investment in infrastructure to support ambitious projects that could be completed in a timely manner. Whether that meant building roads and universities in the public sector, or power plants in the private sector, Hong Kong's methods proved remarkably robust, and the results the envy of the world.

## II

Our power utilities on both sides of Hong Kong Harbour historically invested in the future so they would be ready at short notice to deliver electricity where it was needed; they invested in efficient new plant to ensure capacity to accommodate Hong Kong's physical and economic growth, which raised incomes and, in the natural course of events, electricity demand. Higher incomes, for example, allowed consumers to air condition more space more often—in bigger and higher buildings requiring more lift capacity requiring, in turn, more energy.

March 31, 2006

A vertical urban environment typically requires more electricity to move people, a sprawling city more petrol. Uninterrupted supply becomes crucial for city dwellers as dependent on lifts and rapid transit as we are. Blackouts and brownouts on a scale experienced even in North American cities after storms and other events would be intolerable in Hong Kong's environment. They would quickly diminish, if not demolish, Hong Kong's reputation for being the world's most efficient city to live and do business in. As the Internet transforms and grows exponentially in the coming decade—and significantly more technology is woven into the fabric of our economy, our institutions and our lives—our dependence on reliable power supply will only grow. Like it or not, we are all now very dependent on IT, and IT is absolutely dependent on power—whether at the ATM, shop checkout counter, cinema, MTR turnstile, or carrying a Wi-Fi-equipped pacemaker alerting doctors to abnormal heart beat.

As an IT and business solution provider, IBM would face very different prospects if we or our clients operated in a less reliable environment. Hong Kong's rapidly expanding financial services sector would, too. Our hospitals and other public sector institutions, which we all help to underwrite as corporate and individual taxpayers, would be dealing with a very different set of problems if there were anything less than totally reliable and abundant electricity supply.

Like others, IBM has followed the debate over different charge schemes, interconnection and other issues, including the suggestion that utilities over-invest to recoup higher returns calculated against outlays. We have also listened to some compelling discussion among environmentalists urging we do more in renewable energy—especially since we are entirely dependent on importing carbon fuels.

Many of the arguments raised in the current debate have obvious merit. But whether they do in the context of Hong Kong requires careful study. For at heart they all in one way or another conflate into a formula for fixing a mousetrap that already plainly works.

We are not blind subscribers to the maxim, "If it ain't broke, don't try to fix it." After all, anything that works can usually be made to work better.

The issue for us is that, all other things considered, our power utilities have served Hong Kong well. We would all wish our electricity came cheaper, for example. Who would not? But we all know there is a premium to be paid for totally reliable service of the kind that enabled Hong Kong to grow at the fantastic rate that it has.

March 31, 2006

III

In summary, we found the quality of discussion to be in keeping with Hong Kong's typically high standard. IBM salutes the Government for working as hard as it has done in eliciting views from across the community.

Overall, the best advice IBM can offer is that the community proceed with any changes to current arrangements with all due caution.

It may be deflating for Hong Kong's more reform-minded advocates to hear, but the scheme in force now has served us well. That is not to say it cannot be improved. But we would only stress that those charged with improving it proceed with the greatest care.

IBM is delighted to have the opportunity to take part in the discussion. Please do not hesitate to contact me if you require further information.

Yours faithfully  
For and on behalf of  
IBM CHINA/HONG KONG LIMITED

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation paper of stage 2 electricity market

☐ Urgent ☐ Return Receipt

Economic Development and Labour Bureau

Dear Sir,

I have some comment of the Stage 2 electricity of Consultation Paper. The two electric companies have been performing very well in the world. The electric company can maintain outstanding supply reliability better than other country such as Sydney and London. Two electric companies provide world class service to HK people. The power supply of HK is very reliable and safe. The reliable, safe and efficient supply is very important.

1. People spend much more on transport and telecom than electric service. An electric price in HK is reasonable. If you only want to decrease the electricity price but affect the reliable and safe power supply, I do not agree your suggestion.

2. We know that HK has a first wind turbine in Lamma Island, the wind turbine mean the electric company try to reduce the pollutant in HK, so we need to encourage electric company increase investment in HK especially in environment plant.

3. The 10 year regulation period is not suitable. It is because the electric company will plan the development of electric supply. If the regulation period is too short, the planning is not detail. The regulation period should maintain 15 year or more which is better than 10 year, so the electric company can plan the development of electric supply.

4. The Rate of Return from 13.5% to 7~11%. This level is lower than other business, it is unfair of two electric companies. We know that the investment of electricity is very large. We need encourage electric company investment and make good business environment. The Rate of Return should maintain at this level.

5. The power supply of China is very unstable and not reliable. If power supply from China, it will affect HK people and affect our economic. The interconnection between CLP and HK electric is a good method to increase the power supply reliable. Open third party access the grid is unnecessary.

The Government policy should ensure reliable, safe and reasonable prices of our electric supply. But the Government proposed changes would discourage investment, affect supply security and reliability. A little change of the electric system is suitable.

21st March 2006

Dear Sir,

Comment on Stage II Electricity Market Consultation

We find our present electricity service provided by HK Electric very satisfactory and the tariff charged acceptable. HK Electric's quality service is highly appreciated and we wish to have it maintained in the future. Through our business operations, we recognize the high importance of reliable and safe electricity supply. We therefore consider it essential for the government to ensure the public to enjoy reliable and safe electricity.

We understand that there is proposal in your consultation paper to lower the permitted rate of return of the power companies to 7 to 11%. As this proposed permitted rate of return is significantly lower than the present level, it is probable that power companies will be less willing to invest in expensive equipment in future and power reliability will eventually be affected.

In order to guarantee reliable and safe electricity supply in future, it is considered that the permitted rate of return of the power companies should be maintained comparable to the current level.

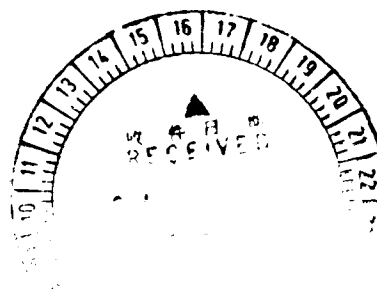

Please take our views into account.

Yours faithfully,

IDS Concepts Limited

Subject: Response to Consultation Paper on Future Development of the  
Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

24/03/2006 15:13

Dear Sir, Madam,

I have lived in Hong Kong for over 12 years. I love living in this city and even set up my own business here but am incredibly saddened by the air pollution that has been getting considerably worse over the past few years.

My main reason for every leaving Hong Kong would be because of the air pollution. I have many friends with children, who have already left for this reason.

Although the Government has been saying for years that they want to reduce the air pollution, it has only been getting worse. I think it makes the HK Government look ineffective.

Kind regards,  
Ilse

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Dear Sir,

## Stage II Electricity Market Consultation

We use computers extensively in our business. Reliable power supply is therefore essential to ensure smooth and efficient operation of our business. It is fortunate that the electricity service we receive has always been reliable and affordable. This really makes us headache-free.

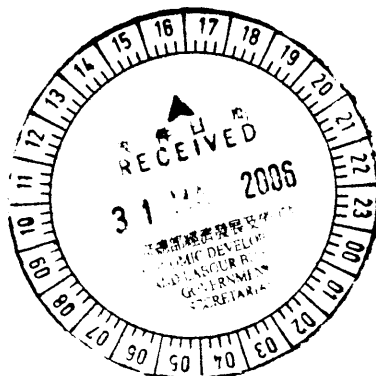

We learn that the government proposes to shorten the regulatory period to 10 years and significantly lower the permitted rate of return of the power companies to 7-11%. We envisage that this will probably cause degradation of supply reliability. Therefore, we are writing to ask you to reconsider these proposals more carefully and, preferably, scrap them.

According to the proposals investment risk becomes higher as the regulatory period is shortened but investment return is lowered. As such, it is not difficult to foresee that these proposals will make the power companies be more hesitant in investing in the required power facilities. This will of course affect supply reliability in the long run.

To ensure Hong Kong people can continue to enjoy reliable electricity supply in future, please take our view.

Yours faithfully,

Tom Lee  
Director

Hong Kong

Dear Sir,

Comments on Stage II Consultation on  
Future Development of the Electricity Market in Hong Kong

We are a financial institution operating in Hong Kong and have been following the developments regarding the future regulatory regime of the electricity market in Hong Kong and have the following comments;

Hong Kong enjoys a reliable and uninterrupted electricity supply which has helped secure its role as a financial centre. Therefore we believe that any change to the existing system should be carefully considered and should ensure continued supply reliability.

We trust the regulators will give close consideration that sufficient financial incentives continue to be afforded to HK utilities companies to ensure that there is continuous investment in electricity infrastructure, and is the key to achieving reliable power supply.

We ask that you could consider our views to ensure that any new changes adopted are beneficial to the parties concerned.

Yours truly,

Shalini Sujanani

Comments On Future Development of  
The Electricity Market in Hong Kong - Consultation Paper

Dear Sir,

I am obliged to provide my comments on the Future Development of the Electricity Market in Hong Kong. I have summarized my comments in the following table:-

Support	Not Support
<ul style="list-style-type: none"><li>a. Policy objective which balances the interest between the investors and the consumers</li><li>b. Bilateral Agreement with power companies requires low governance costs</li><li>c. Return based on ANFA is simple to monitor</li><li>d. Tariff to include costs and permitted return ensures adequate investment</li><li>e. Fuel Clause Account helps to stabilize tariff</li><li>f. Tariff Stabilizing Fund helps to stabilize tariff</li></ul>	<ul style="list-style-type: none"><li>a. Complicated tiers ion the rate of return applied to different types of assets</li><li>b. Reduce rate of return from present 13.5% to a range of 7-11% will impose impact on supply reliability</li><li>c. Reduce regulatory period to 10-year will increase investment risk which may pass to the customer</li><li>d. Supply from the Mainland is not a reliable source</li><li>e. No potential benefits and not cost-effective to increase HEC-CLP interconnection</li><li>f. Third party grid access will blur the responsibility between power suppliers</li></ul>

Yours faithfully,

"HC Ip"

Subject: Electricity Market in Hong Kong - Stage 2 Public Consultation

☐ Urgent ☐ Return Receipt

I would like to express my view on the government proposals on the Electricity Market in Hong Kong - Stage 2 Public Consultation.

1. I disagree the proposal of shortening the duration of SoC regime to 10 year.

Electricity industry has a particular nature. Its asset lives would be usually more than 20 years or even more. The proposal did not take this particular nature into consideration. This will introduce uncertainties in future investment, which would in turn cause problem in power system stability.

2. I disagree the proposal of lowering the return to an average of below 10%.

This, together with shortening of SoC regime to 10 year, would decrease investment incentives and hinder future investment on environmental improvement investment. As a result, risk of power system stability would be increased.

3. I disagree the proposal of lowering the return of environmental improvement investments on coal generating machine. On one hand, government encourage environmental improvement but on the other hand discourage necessary investment incentive.

4. I cannot see clear plans in the proposal to migrate Hong Kong electricity market to a more competitive market. This would create the risk of disorder in the electricity market.

Regards,

Ip Hoi Cheong

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Hong (Stage II Consultation)

☐ Urgent ☐ Return Receipt

Dear Sir/Madam,

I would like to have the following comments on the Consultation Paper (Stage II Consultation) for your consideration:-

1. The consultation paper has simplified some issues involved, without given sufficient details to support the argument, e.g. how proposed permitted return of 7% - 11% is determined. Any new initiatives in future regulatory regime should not lead to any increase of tariff, except for inflation, fuel cost adjustment, and impair electricity supply reliability and safety. I do hope that the new regulatory regime will create a win-win-win situation for the HKSAR government, HK citizen (consumers) and power companies (shareholders, the power company and the employees).
2. The term for future regulatory regime after 2008 should be long enough to provide sufficient incentive for the power companies to invest in improvement of environmental protection, introduction of clean energy and maintenance of high supply reliability. The attractiveness of a 10-year term is questionable taking into account the long lead time for infrastructure projects, long return period and risk exposure of this capital intensive industry.
3. As regards the proposed permitted rate of return in the range of 7% to 11%, I understand that there are divided views on the proposed lowest rate of return for emission reduction facilities. In my view, the proposed approach would provide less incentive for the power utilities to invest in such kind of facility to improve the air quality further. So I would support a single rate of return for all types of assets to avoid this contentious matter. Also, the permitted rate of return should be attractive enough to promote investment.
4. Any initiatives leading to future de-regulation of electricity market should generate long term benefits to the consumers. If the regulatory regime after 2008 can achieve reduction of electricity tariff from 10% to 20% expected by the HKSAR Government, I do not think opening the electricity market will bring further significant benefits to the consumers based on the experience of those countries where the electricity market has been open for competition.

Best Regards,  
Ip Sui Lun

Subject: Comments on Stage II Consultation on the future Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Dear Sir/Madam,

Please find below my views on Stage II Consultation on the future Electricity Market in Hong Kong.

I support the current institutional setup with responsibilities taken by various Government Departments to effectively monitor the performance of the two Power Companies. This is well demonstrated by the fact that Hong Kong people have been enjoying the existing electricity supply which is reliable, safe, affordable and environmentally responsible over the past several decades. The existing tariff adjustment mechanism without involving political considerations should be maintained.

I do not agree to lower the permitted rate of return (ROR) to 7~11% since this would only dampen incentive of the power companies to invest in the infrastructure which is usually of 30~35 years' service life. Their investments are vital to maintain the reliable and environmentally friendly electricity supply, particularly in Hong Kong with so many high-rise buildings.

The proposed regulatory regime is only for 10 years (2009 - 2018) with an option of extending another 5 years. After the proposed regime, it is likely that the third-party grid access and new supply sources from the Mainland would be introduced. If the two power companies invest a lot in less polluting generating units, the return they are getting will be extremely small for just a few years' time in the proposed regime. The proposed regulatory regime should therefore be extended to 15 years or even longer so as to clear any uncertainties for the two power companies which will then continue to deliver their success in the electricity industry.

I prefer to retain the single ROR for Average Net Fixed Assets as the beauty of the single rate is simple and straightforward. It is customers who pollute environment through the use of electricity, not the power companies. The proposal of subjecting the emission reduction facilities to the lowest ROR contradictory to the Government's "Polluter Pays Principle" is not supported.

The operation of power plants in Hong Kong is now governed by the Specified Process (SP) Licences issued by EPD under the Air Pollution Control Ordinance. Given that failure to meet the emission performance set out in the SP Licences will contravene an offence, the power companies have already been subject to penalties. The emission penalty mechanism proposed in the consultation paper, which ties ROR together with the emission performance, is not acceptable. Calculation of ROR should be based on the existing methodology for easy implementation.

Yours sincerely,

Ip Tat Yan

Future Development of The Electricity Market in Hong Kong  
(Stage II Consultation)

Dear Mr. Ip,

With reference to your stage II consultation paper on the future development of the electricity market in Hong Kong, I would like to express my personal views on this subject.

In my opinion, lowering the rate of return to a level of 7-11% is considered unattractive from investor viewpoint for continuous investment to maintain a reliable electricity system in Hong Kong. Also, shortening the regulatory period to 10 years will increase the investment risks. I am afraid that the 10-year regulatory period and the 7-11% rate of return will discourage investment from the power companies in the electricity supply infrastructure in Hong Kong. Without adequate investment in the electricity supply infrastructure, the reliability of electricity supply in Hong Kong will deteriorate. Also, this would have severe impact on the economy of Hong Kong.

To maintain the current level of supply reliability, I suggest the Government to provide a return not less than the present level of 13.5% in the post-2008 regulatory regime. Personally, I don't mind to pay more in order to enjoy the quality of electricity supply services presently provided by the power companies.

Yours faithfully,

A handwritten signature in black ink, appearing to read 'Ip Tin Fat', with a stylized flourish underneath.

Ip Tin Fat

28 March 2006

Economic Development and Labour Bureau  
2/F., Central Government Offices, Main & East Wings  
Lower Albert Road, Central  
Hong Kong

Dear Sir,

Future Development of the Electricity Market Development in Hong Kong  
Stage II Consultation

In last several decades, electricity supply service in Hong Kong is very good and I am happy with the current level of electricity supply reliability.

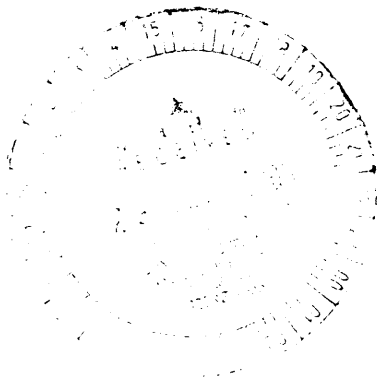

Government states that reliability of electricity supply is very important and the focus of the future electricity market development should be on maintaining reliability. I fully agree with the Government's position. But, some proposed changes in the consultation paper such as reducing permitted return and shortening the regulatory period will have some impacts on the reliability of electricity supply. I am afraid that the reduced financial incentive to the power companies and increase in risk due to shortened regulatory period might lead to insufficient investment in electricity infrastructure, and might thus affect supply reliability.

I suggest the Government to evaluate the proposals in the consultation paper with caution, so that Hong Kong will continue to have an adequate, certain and reliable electricity supply.

Yours faithfully,

Ip Ying Lung, Dende

To: Economic Development and Labour Bureau

Fax No.: 2868 4679

Subject: Stage II Consultation on Future Development of the Electricity Market In HK

---

With reference to the captioned, I wish to contribute my views as follows:

1. The current rate of return of 13.5% on assets shall be retained to provide sufficient incentive for future investment so that supply reliability will be maintained.
2. The responsibility of handling over-invested assets shall be shared equally among the concerned power company and the government because the investment plans are approved by the government before implementation.
3. Term of bilateral agreement shall not shorter than 15 years given the prolonged asset payback period of over 30 years.
4. As electricity derived locally from renewable energy would be intermittent in nature and small in quantity, it cannot replace conventional power plant. These assets are therefore "extra" and will additionally boost up the tariff. So drop the idea.
5. Balanced mix of fuels among natural gas, coal, oil and nuclear shall be promoted for cost effectively supplying electricity in Hong Kong. Hong Kong should continue to allow construction of coal-fired power plant with up-to-date emission controls so that Hong Kong's economy will not be heavily affected by the international price fluctuations of natural gas.

Ir. Chen An Ching

18 March 2006

Secretary for Economic Development and Labour  
Economic Development and Labour Bureau  
2/F Central Government Offices  
Main & East Wings  
Lower Albert, Central  
Hong Kong

Dear Secretary

**Future Development of the Electricity Market in Hong Kong  
Stage II Public Consultation**

In response to your letter of 6 January 2006 enclosing the Consultation Paper on the captioned subject, I would like, in my personal capacity as a professional engineer, give below my comments and views for your consideration:

**1. Policy Objectives**

The following two broad term key objectives proposed by the Government have my full support with following minor amendments for clarity:

- To ensure that the public can continue to enjoy reliable, safe and efficient supply of Electricity at reasonable prices
- To minimize the environmental impact caused by the production and use of Electricity

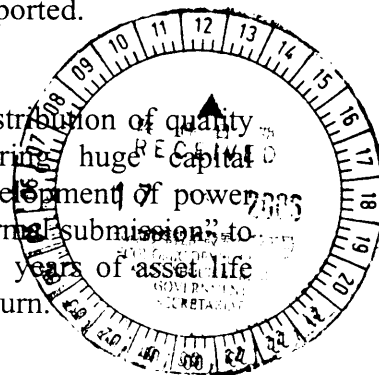

**2. Post-2008 Regulatory Instrument**

**2.1 Bilateral Agreement**

In view of the existing disparities between Hong Kong and Mainland China in terms of supply reliability, environmental standards, compliance enforcements, transparency, accountability, corporate governance and socio-political structure would unlikely go away entirely in the next 10 years, the Government's proposal to continue to exercise economic regulation over the two power companies as Electricity Service Providers through the legally-binding Scheme of Control Agreements (SOC) is fully supported.

**2.2 Duration of SOC Agreement**

It is well recognized that production, transmission and distribution of quality electricity is a major infrastructure business, requiring huge capital investments with a very long payback period. The development of power plant requires a lead-time of at least 5 to 7 years from "formal submission" to "statutory approval" to proceed. Furthermore, 30 to 35 years of asset life means that at least the first 5 years would yield negative return.

Furthermore, Government's policy on using natural gas as fuel for all new generating units would require power companies to enter a long term (20 to 25 years) take-or-pay (TOP) gas supply contract for secured fuel sourcing. In order to provide a stable and certain environment conducive for long-term investment by power companies, the proposed duration of 10 years with an option to extend by another 5 years is considered inadequate. The exiting arrangement of 15-year is reasonable and justified to be retained for the Post – 2008 SOC Agreement.

### **3. Return**

#### **3.1 Rate Base**

In view of the capital intensive nature of the electricity supply industry, Government's proposal to continue to adopt a fixed asset approach using Average Net Fixed Assets (ANFA) is reasonable and hence fully supported.

#### **3.2 Permitted Rate of Return**

The proposed adoption of several tiers of permitted rate of return requires further review. This approach will lead to heated arguments in asset clarifications and inevitably create more bureaucracy and increase in administrative costs.

##### **3.21 *Generation, Transmission & Distribution Assets***

The electricity supply industry operating within in the proposed Post-2008 Regulatory framework is still in the form of “vertically integrated market structure”, the level of investments associated with the different operations in the supply chain, i.e. generation, transmission and distribution is considered insignificant. It is considered more cost effective to retain a single permitted rate of return for both generation asset and transmission & distribution asset.

##### **3.2.2 *Emission Reduction Facilities***

The proposed lower permitted rate of return for emission reduction facilities is fundamentally wrong and is counter productive to the pressing need to improve the air quality of Hong Kong. It is felt necessary to mention that power companies are electricity service providers whereas electricity consumers are users. The power companies produce electricity to meet the demand requirements of the consumers. Power companies will produce less if demands by consumers drop, or even stop production if there is no demand for electricity.

Based on “Users Pay” and “Polluters Pay” principle, it is the users for their own comfort and convenience that causes pollution, and hence the users should pay for the consequent “clean up” costs. It should be noted that emission reduction or pollution control facilities are part and parcel of generation asset and hence the permitted rate of return for emission reduction facilities should be treated at least the same as generation asset, if not higher as an incentive to produce low emission electricity.

There are provisions under the Air Pollution Control Ordinance (APCO) to handle any non-compliance of statutory emission caps. There is no need to link the permitted rate of return on all fixed assets if the power companies to their achievement of the emission caps and reduce such permitted rate of return if the companies do not achieve the caps.

### **3.2.3 RE Infrastructure:**

The proposed adoption of higher permitted rate of return for Renewable Energy (RE) Infrastructure is commendable to encourage development and application of RE in Hong Kong is commendable. However, as pointed out earlier, the adoption of different tiers of permitted rate of return approach has numerous inherent shortcomings. The mechanisms currently adopted in the European Union countries and the USA, such as capital subsidies in the form of grants, rebates, tax credits and feed-in tariffs should be further explored for possible application in Hong Kong.

### **3.2.4 Level of Rate of Return**

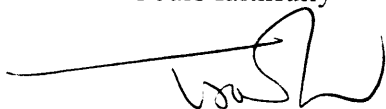

Information given in the Consultation paper and presented by EDLB official at seminars and other forums is so far in adequate for the public to be convinced that the proposed permitted rate of return in the range of 7% to 11% is an amicable arrangement taking due consideration of the interests of all stakeholders. It is not disputable that the exiting permitted rate of return of 13.5% on fixed assets and 15% for assets financed by shareholder's funds require review due to concerns raised by the public arising from severe economic downturn period during which deflation took place.

Given the long asset life, the comparatively short duration of the proposed SOC Agreement, lack of information on the incentives for improvements and disincentives for under-performance of operational efficiency, supply reliability, customer services performance, and uncertainty of the regulatory framework, it is very difficult to work out an equitable permitted rate of return at this stage. Having said that, if the permitted rate of return has to be firmed up now, it should be at least 11% of ANFA for all assets and facilities as an inducement to secure continuing investing in infrastructures needed to ascertain supply reliability.

## **4. Institutional Setup**

Under the exiting set up of Hong Kong SAR Government and political climate, Government's proposal to retain the current setup with responsibilities for economic, safety and environmental regulations undertaken by various Government bureaus and departments for Post-2008 Regulatory Arrangements is wise and is hence supported.

Yours faithfully

Ir Dr C W Tso

Subject: View from Ir Edmond KW Mo - Consultation paper on future development in electricity market (Stage II)

☐ Urgent ☐ Return Receipt

To whom it may concern

After careful scrutiny of the consultation paper, I rather like to retain the existing scheme of control (SOC). Frankly speaking, I support the principle to lower the tariff. However, the family expense on tariff is reasonable (as comparable to traffic expense). Besides, the high reliability of power supply is curial to an international city, especially to world leading financial city like

Hong Kong.

The segregation of permit returns into different categories doesn't seem to be a solution to ensure a lower tariff. For renewable energy, as limited by our geographical constraint, the economic returns in using this technology is insignificant, its implication in promoting environmental protection are far valuable.

The ten years plus five years option review period doesn't seems to be a fair option. The return of investment in power industry is extremely long. The last five years option create bottleneck in investment, or restrict the long term planning. At worst scenario, the result could be reliability lost if the development plan fails to meet with a rapid electricity growth.

For either open market or interconnect to Guangdong, we could not be benefit in a foreseeable future until Guangdong has excessive electricity; besides, if the policy handling incorrectly, similar result as California blackout could happen. Further, experience in open market could tell either the government has to spend huge money to subsidize the power company (resulting in increasing salary tax etc.), or even worst, the customer has to pay more without real option.

The legislative control of tariff is ridiculous. Both power companies are non-government owned or subsidized. Even treat it as an isolated case, Hong Kong's international free market image will unavoidably be damaged. The existing SOC agreement has provide sufficient authority to avoid over investment of their capital expenditure.

In principle, I agree the punishment scheme for any over pollution. However, details specification and quantitative figures or reference should be provided.

In conclusion, the existing SOC shall be retained to ensure our reliable electricity supply and positive international image.

Regards,

Subject: Response to the Stage II consultation on the future development of the local electricity market

☐ Urgent ☐ Return Receipt

**To whom it may concern**

**Response to the Stage II consultation on the future development of the local electricity market**

1. I would support any government policy to drive the electricity tariff down but I would doubt that the open up the electricity market without any clear plan (i.e.: when an how to open) would lead to reduction of electricity tariff. The open up the electricity market without any clear plan would give the public an impression that government is only keen to re-distribute the huge profit earned from electricity sector. In contrary, the government is not too concern whether the new policy would lead to deterioration of electricity system reliability.
2. I also oppose any policy which would lead to the closing down the Power Stations in Hong Kong. If we have to import electricity from China, this would give up our own control to the electricity industry and eventually losing control on the electricity tariff.
3. I believe HKSAR Government should give clear environmental incentives to the power companies to improve existing coal fired power plants emission control. Although gas appears to be cleaner than coal but coal is a much cheaper source of fuel in comparison to gas, we should encourage the power companies to diversify their sources of fuel for their power stations or otherwise we have no control to our future electricity tariff. Bear in mind that recently there are many new coal-fired power stations built in the world because today' s technology can make coal a clean fuel.

Electricity Market in HK.pdf

## **Consultation Paper on Future Development of the Electricity Market in Hong Kong – Stage II Consultation**

While stage 1 consultation has suggested the priority items in the following order:

- (1) Tariff
- (2) Reliability
- (3) Environment

I would suggest the priority items of the future electricity market should be as follows:

- (1) Environment
- (2) Reliability
- (3) Tariff

### **Environment**

2. On environmental aspect, the power companies operating in the de-facto monopoly market condition should have an important role to play and contribute. The concept of ‘user pay principle’ should be clearly debated. It can be argued that consumers, being the final users, be responsible for all costs involved to have clean electrical energy. On the other hand, will the power companies be allowed to earn attractive return on investment on environmental improvement measures which have to be installed and operated under statutory requirements, or that should be part of their costs (not allowed to get return) in operating and earning profit in such de-facto monopoly market condition?

3. Investment in ‘proper’ environment protection plants for power generation would be classified as cost of doing business, and the rules shall determine if such cost should be recovered from the consumers buying and using the electricity or a condition to earn the profit.

4. Electricity utilities, in doing their business on electricity generation and sale, must have a clear defined role on environmental protection. The current arrangement through licencing renewal arrangement under Air Pollution Control Ordinance has certain limitations:

- (i) Inflexible in responding to international cooperation agreement to be agreed at inter-government level.
- (ii) The penalty amount under a penalty approach for non-compliance may not be compatible to the sale profit and the need to invest on

environmental improvement assets.

5. The power companies shall adopt the best practice of environmental measures in the production of electricity for sale, in particular for coal fired power generation which remains to be essential in fuel mix. Simply switching to cleaner fuel should not be encouraged because of the cost involved and tariff implication, and yet a right mix of fuel supply is very essential on supply security and reliability aspect.

6. To link up environment performance to the appropriate rate of return is supported as an effective mean to ensure the electricity utilities not only invest on proper environmental protection plant, but also need to operate them effectively to meet the stated targets.

7. I support the proposed approach with the 2 power companies:

- (i) Lower rate of return on investment on environmental measures.
- (ii) Penalty linked to rate of return if their environmental measures fail to meet the statutory requirements.

8. The concern expressed by power companies to comply with the emission caps in time should be resolved through a clearer and better coordinated channel to serve the community as a whole.

### **Energy Efficiency and Conservation**

9. There is a need to rethink how to encourage energy efficiency in the new scheme of control (ie the new market environment) and the role of electricity utilities. In business terms, electricity utilities are selling electricity, and there is really a conflict to their business interest to encourage less use of electricity. They would in fact marketing electricity sale, and adopt measures to gain better profit or investment opportunity under the current scheme of control rules. Under the current scheme of control, any success on reduction of electricity usage, either through DSM programmes would result drop in electricity sale. However, the permitted return of profit based on the asset investment value will thus allow tariff increase. In other words,

- Electricity utilities will earn same profit in the agreed period based on their investment.
- Any success in electricity usage reduction would increase the basic tariff rate, and consumers will not gain any investment on their energy efficient products.

10. Here, electricity utilities are responsible for their load forecast

(including peak demand) which has strong bearing on their investment decision, in particular on generation aspect. There is however little risk or penalty for over forecast under the current rules.

11. These subjects should be reviewed critically in a fundamental way to address the role of electricity utilities in the strategic task of promoting energy efficiency and conservation in the community, i.e. use of energy for environment protection.

## **Reliability**

12. This subject covers a wide range of subjects in electrical engineering, ranging from a right fuel mix, spinning reserve in operation, excessive generation capacity available, LOLP, operating environment and condition as well as the actual reliability indicator for the consumers. Safety would also be added as one of the parameter measuring reliability.

13. In view of the essence of electricity supply for the daily operation of HK community, performance indicators should be clearly set and measured to reflect/monitor power companies obligation and performance to supply in a reliable manner.

14. Power companies would like to have a clear energy policy to define the right fuel mix for their investment. However, the market rule shall allow players to optimize the results with all the targets, rules and constraints imposed including supply reliability, T&D configurations and response plan etc to meet the customer needs and balance the tariff.

15. To extend the argument for environmental performance, the rate of return should link up key technical performance targets to ensure both proper investment, operation and utilization of the assets. Any over investment, no optimization of existing asset utilization, failed reliability performance or supply security would affect the profit return.

16. This approach would be more than the technical audit requirements under the present arrangement. A stronger regulatory body is necessary for such role.

## **Tariff**

17. While consumer would like to have lowest tariff, they should be aware of that a cleaner environment from electricity market will require costs, ie higher tariff. The community should be educated properly with mind set on sustainability and prepared to pay more for the use of cleaner electrical energy.

18. The present rate of return has room to go down for reducing the tariff to consumers. There is a risk of more electricity usage or wastage if tariff becomes lower. There is also a need to design properly tariff system to take care the poor, discourage wastage in domestic sector and allow incentive for all sectors to invest on energy efficiency and conservation installations.

19. The tariff system may also include a form of carbon tax for the creation of fund for government or NGO to promote energy efficiency and conservation.

The other key points are:

### **Grid Access**

20. Grid access to others, including RE users, RE suppliers and distributed electricity producers should be properly encouraged with clearly defined roles of all stakeholders and rules in the new agreement. It is not desirable for the 2 parties to resolve for such arrangement as proposal in the consultation paper. Instead, there should be clear conditions and proper government authority to encourage this practice with proper financial incentives for the community/market to response. The electricity utilities should buy all such electricity in excess to the grid and provide the necessary backup, thus encouraging the market or domestic users to invest on RE or other new electricity generation technologies in a distributed manner. Example is the present landfill operators will have sufficient financial incentive and clear market rule to invest on biogas electricity generator and gain return for the whole landfill operation business. At present, HK is burning off a substantial amount of biogas from landfill sites in term of MW daily. Likewise, domestic or commercial users would like to invest on PV or other RE technologies if their usage would be connected to the utility grid with proper financial incentives, selling back excessive electricity during certain periods say during weekend from offices buildings or holidays from these domestic houses.

### **Sustainable Development**

21. The design of the future 15-year electricity market should link up with the sustainable development strategy of the community. The promotion of RE usage is of particular important.

## **Competition/Open Market**

22. I see the need for more time to investigate if Hong Kong electricity market is suitable for open competition. Yet, it is essential and critical to open the grid for access to promote use of RE as the first step in this coming 15-year period, as discussed in para 20.

Subject: The proposed "Scheme of Control" Comments  
☐ Urgent ☐ Return Receipt

Dear Officer,

In light of the review of Electricity Market "Scheme of Control (SoC)" after year 2008, I have the following opinions:

1. The Government proposal of permitted return of 7 to 11% for a 10 years review cannot even break even for the simple "Expectation Theory" mathematics, no one will be interested to obtain a \$10 dollar return by every \$100 after 10 years and there is no guarantee for what is happening afterwards. I urge the Government should be more realistic to provide a fair chance for a business to run.

2. The emission constrains cannot be too stringent for the power companies, since the environmental protection engineering project takes time, should there be heavy penalties and stringent requirement are imposed, I think the Government should make a good sense and be fair to them.

3. Many Legislative counsellors are saying the power companies are making a huge profit with their eyes in "red" for other people's business running successful; there is no mention for how much those power companies owners invested. On the other hand, we can make use of foreign power companies' statistical information to give the power companies a fair chance to struggle for a survival in the competitive business world. For example, Tokyo is a city of expensive electricity cost, yet their electricity reliability performance is well below us. Our Government should realize that every output worth a cost. Should you want it, you better pay for it.

4. Citizens can accept a train failure and be fixed within a couple of hours; but no one prefers to risk the well-ranked reliability of electricity supply in HK and risk HK economy. When we compare the reliability of the rails to the power companies, it is absolutely reasonable to pay a little bit more for a safe and continuous supply of electricity, just like many people consider environmental protection is vital, they should also be realistic that they should accept to pay more.

Thank you for your kind attention.

Ir Terence S.W.Wong

Subject: Comment on stage 2 consultation papers for future development of electricity markets

☐ Urgent ☐ Return Receipt

Dear Sirs

As a electrical engineer in Hong Kong, I would like to express my views on the Stage 2 Consultation Papers.

First of all, I agree with some change in the scheme of control after 2008 is necessary in order to have better environmental protection measures, a reasonable price in electricity while maintaining a high standard of supply reliability.

However, I would like to comment on some areas as follows:-

1) Only 10-year regulatory period is not appropriate

It is unfair to any investors for public utilities e.g. power generation, transmission network, town gas etc to have only 10-year regulatory period. Investors is not willing to bear the risks for investing in electricity infrastructure, which capital investment is high and the asset life is more than 30 years. In addition, it is necessary to have a long term agreement to get the reliable source and cheaper cost of fuels e.g natural gas. From the recent news of Town Gas, they said they have signed a contract of natural gas for 25 years in 2002 so that they can get a cheaper price and the HK people can then enjoy a lower cost of fuel. Therefore The current 15-year regulatory period is more appropriate.

2) ROR is 7-11% can not be justified

Interest rate is increasing with inflation rate. Now, the prime rate has just be raised and the mortgage loan rate has already reached 8-8.25%. It is difficult to understand that why ROR is 7-11%, most companies can earn more by investing the same amount of capitals to Oil company, town gas, retailing, bank loans etc . Even it is less than 10%, the ROR seems to be not attractive and comparing with the risk for investment and doing business. It discourages power company to serve consumers with good quality and reliability, lack of further and continuous investment might cause poor supply reliability in the future.

3) Different RORs for different asset types are unnecessary, complicated and costly; and will discourage environmental protection

The traditional practice in calculating the RORs for capital assets is direct and less complicated, the RORs for investing the assets such as renewal energy and environmental protection facilities should be the same, otherwise, it is discouraged and unfair to anyone who aims at better environmental protection. In Hong Kong, there is limited potential for developing renewal energy and it is expensive to run a wind turbine plant, developing emission reduction facilities for the existing coal fired power station are required, certain incentive and the same level of RORs are the correct approach as incentive.

4) Linking of ROR to emission caps achievement is unreasonable and unfair

It seems to me that the emission caps for the next 10-15 years are unknown as mentioned by the Director of CLP. It is difficult for the power companies to plan ahead. Both the two power companies has been said that it is difficult to follow the Emission caps set by EPD before 2010. Both the two power companies might be required to shut down the existing coal fired units as these units can not meet the emission Cap required. Unless, the can retrofit FGD plants for the existing coal fired units and to invest additional gas-fired combined cycle in order to cover the future demand and to meet the emission cap.

It is also unfair if the power companies can not meet the emission caps, there will be a reduction in permitted as mentioned. Please note that it is a double-penalty as there will be another penalty for not meeting the emission caps under the Air Pollution Control Ordinance (APCO).

5) Government's approval of tariff adjustments will increase risks of investor-owned companies

There is an increasing trend that many politicians in the legislative councils are against any increase in price adjustment in order to please the general public and pressure groups. In addition, long time is required for HKSAR to proceed and approve any price adjustment and the adjustment rate is uncertain or totally rejected. The costs and permitted returns for power companies cannot be adequately protected which increase risks to the investors.

6) Import electricity from the Mainland seems to be difficult in the next ten years and the Supply reliability and environmental protection is in doubt.

Many HK factory investors in Mainland China always experience and suffer from the lost of electricity during their production period. Can HK as a financial center afford such as low supply reliability?

7) Open access for the new supply sources should be a long term consideration and can not be implemented in the coming 10 years

HKSAR should consider all the quality, reliability, safety and environmental protection of other electric supply sources are of the same standard as the two Hong Kong Power companies in order to have a fair competition. Otherwise, some new comer can just supply electricity to some selected large customers at a cheaper cost , the other general public will then suffer a higher cost.

If there is open access, the cost of access should be such that the user pay for their choice e.g. renewal energy at a high cost ,the cost should not be subsidized by other consumers

In addition, the HK market seems to be small to have a good competition for open access like that in USA, China, or UK, Australia. The benefit for price reduction is questionable. From the recent black out cases in USA and Europe, the drawback of interconnection can increase of supply reliability is very good example for HKSAR to consider deliberately for Open Access and Interconnection.

Subject: Stage II Consultation On Future Development of the Electricity  
Market in HK

☐ Urgent ☐ Return Receipt

Dear Sir,

Please find my comments as attached.

Regards

Ir Yuen

ak4514.doc

Dear Sir,

Stage II Consultation On  
Future Development of the Electricity Market in Hong Kong

I refer to the above consultation paper and would like to express my views as follows:

1. Bilateral Agreement between the Government & Power Company

This is a good arrangement and has been working well in the last decades for Hong Kong in ensuring reliable and safe electricity supply and should be continued.

2. 10-year Regulatory Framework

Given the long-term investment cycle of electricity infra-structure and contractual commitments, the regulatory period of 10 year is not realistic. It cannot provide a stable and certain environment for long-term investment by power company.

3. 4-tiered Rate of Return

The 4-tiered system is too complicated and is not reasonable. There is no reason why the asset for emission reduction should not have the same ROR as for the renewable energy as they are both introduced for improving our environment.

4. Rate of Return Not Reasonable

A 7% ROR is indeed too low for an investment with reference to the present interest rate scenario.

Yours faithfully,

Ir Yuen

Subject: Response to Consultation Paper on Future Development of the  
Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Future Development of the Electricity Market in Hong Kong Stage II Consultation

☐ Urgent ☐ Return Receipt

Economic Development and Labour Bureau

Dear Sir,

Stage II Consultation

I like to comment on the emission reduction issues of your Stage II Consultation proposal.

1. I support the Government to encourage the two power companies in reducing their emissions. However, the Government should have a clear picture of the post-2008 regulatory framework for the power companies to carry out their long-term investment planning before imposing emission cap penalty.

2. I do not think it is appropriate to link the permitted return on all fixed assets of the power companies to their achievement of the emission caps as the permitted return should be directly related to the cost of raising capital and associated with various risks incurred not with emission cap target achievement.

Yours faithfully,

Irene Kong

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

25 March 2006

Economic Development and Labour Bureau  
2/F., Central Government Offices,  
Lower Albert Road, Central,  
Hong Kong.

Dear Mr. Ip,

**Future Development of the Electricity Market in Hong Kong**

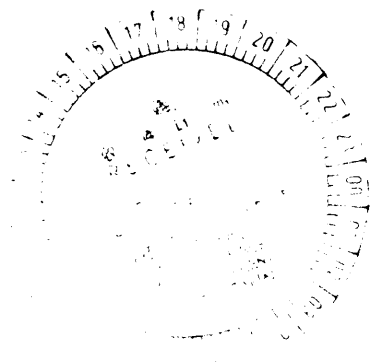

In response to your Stage 2 consultation on the future development of the electricity market, I provide my views as follows for your consideration.

I cannot see how your varying return rates can help alleviate the environmental problem in Hong Kong. While the proposal seems to be encouraging investment in renewable energy in Hong Kong, it makes little economic sense. It is a well accepted fact that, due to the inherent physical limitations, Hong Kong has little realizable potential of developing renewable energy sources. A higher permitted rate of return will therefore only look good on paper but will get us nowhere in practice. As a responsible government, is this what you should do to appease the environmentalists then?

I strongly urge the Government to be more down-to-earth when formulating a future regulatory regime to provide a clean environment for Hong Kong.

Sincerely yours,

Irene Ng

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

30th March 2006

Economic Development and Labour Bureau,  
2/F., Central Government Office,  
Main and East Wing,  
Lower Albert Road,  
Central,  
Hong Kong.

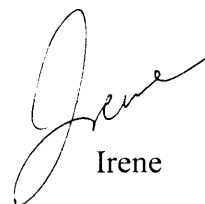

Dear Sirs,

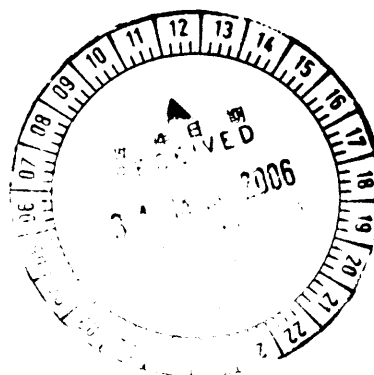

Future Development of the Electricity Market in Hong Kong  
Comments on Stage II Consultation

I refer to your Stage II Consultation paper and have the following comments for your kind consideration please.

As an accountant, I am concerned about the return on asset whether it can really attract the two power companies in Hong Kong to continue their investment in view of the long investment return period of 30 years or even more if there is any change in existing SCA with the two power companies such that the electricity supply reliability may be severely affected. Unlike the bus companies, their buses may operate at other countries within a very short period of time, the "liquidity" of the assets of power company is very low. Therefore, they are deserved to have a higher return on asset than the bus companies in view of the possible risk.

Yours faithfully

  
Irene

敬啟者:

本人希望就「香港電力市場未來的發展第二階段諮詢文件」表達個人意見。

中電現時的電價中規中矩。我們不應將貨就價，電價減了，而可靠度却一同下降。故此，電力改革不應只着眼於降低價格，而應着重電力市場的可持續發展

希望政府多加考慮有關問題。

此致  
經濟發展及勞工局局長

Subject: clean air

☐ Urgent

☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. Demand management must be built into the profits of the company. There must be a mechanism where they profit if they can significantly reduce energy demand. At present they only profit from Increased demand.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

Subject: Future Development of the Electricity Market in Hong Kong Stage 2 Consultation

☐ Urgent ☐ Return Receipt

Dear Sirs,

Please find my comments for the captioned subject below:

If the permitted rate of return is unreasonably low as it was proposed, the power companies may not invest any more, as a result, reliability of electricity supply will be deteriorated. All citizens in Hong Kong may incur much higher costs in terms of lost of time, data, money and prestige of an international city from power interruptions.

The proposed 10-year term for the new agreements is too short for the power companies to recover their capital intensive investments. As the asset life of the capital equipment are more than 30 years plus the long-term fuel contracts are as long as 25 years. Such a long and uncertain period will discourage future investments and forces the power companies to increase tariffs.

I strongly agree to give a higher rate of return to renewable energy infrastructure, but it is not reasonable to give the lowest rate of return of 7% for emission reduction facilities as both of them are aiming for emission reduction and better air quality.

☐ Urgent ☐ Return Receipt

To whom it may concern,

As a HK citizen, we've taken electricity for granted, and have enjoyed ample and reliable supply of electricity for as long as I can remember. From experiencing blackouts in Toronto, Canada in the summer of 2004 and also constant electricity shortage while working in Mainland China, I have come to appreciate the high level of quality and reliability of HK's electricity supply.

Hong Kong relies on a reliable source of electricity for millions of daily operations, without a stable supply of electricity, it's image of efficient and fast-paced world class city will deteriorate.

Please I strongly oppose to the new proposal and advise that you would reconsider for the betterment of Hong Kong.

Thank you,

Iris Leung

Subject: Views on Future Development of Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Dear Sir,

Please find my comments in the documment attached.

Regards  
Iris Wu

StageII\_View\_I.doc

28<sup>th</sup> March 2006

Dear Sir,

With reference to the Stage II Consultation Paper, I would like to express my opinions on the Future Development of Electricity Market.

I would like to repeat that a high level of power supply reliability is of paramount importance to our society and economy. However, some of the proposals, if implemented without consideration of the current market condition, will cause an adverse impact on the power supply.

The proposed permitted rates of return of 7-11% may not be able to attract investment required for building a reliable electricity system. In addition, electricity industry is capital intensive and has many long life assets. The proposed 10-year regulatory framework is too short because it has only 10 years of certainty for cost recovery and return earning. The existing 15-year regulatory period is recommended to retain.

I advise the Government that sufficient incentives must be provided to the power companies to induce their long-term investment such that our supply reliability can be maintained after 2008.

Iris Wu

敬啟者:

兩電為期十五年的利潤管制計劃行將在 0 八年屆滿，政府對香港電力市場未來的發展諮詢文件中很多建議具有漏洞，若不加以糾正，將會影響香港供電系統的可靠性。本人就此有以下之意見 :-

### 反對新經營者加入市場

兩電供電可靠性達 99.99%，四十年來香港從沒有像菲律賓或廣東那樣缺電，在有利潤協議的保障下，才能建立龐大的後備發電，新的電廠要入市又談何容易？

### 反對政府建議回報率大幅減至 7%-11%

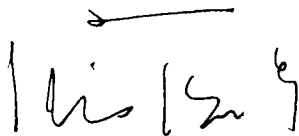

電力行業的投資牽涉甚高的風險，投資者只會在預期獲得合理而明確回報下，才願意承擔投資風險，所以將回報削減只會令投資者意欲降低。

若減排設施的投資能達至減排目標，為何要訂立較低的回報率？若中電被逼要以燃氣設施取代所有現行的燃煤機組，在依賴單一燃料下，燃料供應的穩定性必受威脅，電費之預期價格更會增加。

### 反對政府縮短協議年期至十年

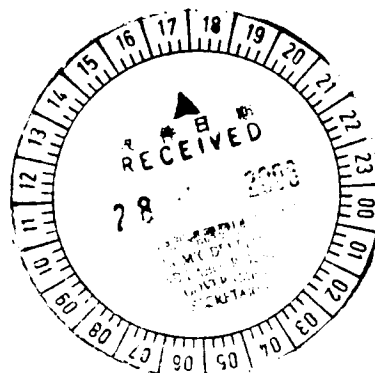

發電是大型基建項目，涉及的資金動輒數以十億港元計，沒有像為期十五年的利潤計劃的回報保障，誰會冒險作這樣的長線投資？

本人期望政府能確立一個清晰及客觀的機制，保證電力行業能持續發展，不要把香港東方之珠之美譽一朝盡喪。

Iris Yang

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

To Whom It May Concern,

It has come to my attention that you are soliciting comments from the public regarding energy policies/air quality issues in Hong Kong SAR. This is particularly relevant to me given that I recently requested a transfer out of my company's Hong Kong office to Tokyo due to my concerns that the poor air quality was affecting the health of my family. While I do not profess to be an expert in such matters, I would think some of the options available to you are: 1) stop burning so much coal; 2) use more LNG, wind power; and 3) install the best scrubbers ASAP.

Thank you.

Subject: Stage 2 Consultation Paper on Future Electricity Market

☐ Urgent ☐ Return Receipt

Dear Sir,

I want to express my view on the 2<sup>nd</sup> consultation paper on the future development of electricity market.

It is hard to find the reasons for changing the existing SOC which has been operating smoothly, effectively and efficiently. Under the current SOC, sufficient incentives and liability have been given to the power companies to maintain a reliable and affordable supply of electricity. This is truly reflected in the zero incident of blackout or shortage of electricity supply; and that the electricity expenditure only constitutes to 1.7% of the average household expenditure (this is much less as compared with transportation expenditure of 9.0%).

Changing the current SOC may not be a wise decision and there may be chances that all the HK citizens will become losers. Therefore I consider that the current SOC and its terms and conditions should be remain unchanged.

Regards,

Isaac Y. H. Woo

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Hong Kong

Dear Mr Stephen Ip,

Stage II Consultation Paper on Future Development of the Electricity Market in  
Hong Kong

There is a proposal that future tariff adjustment needs to be approved by the Government. I think this will harm Hong Kong's reputable free market image. If there is already a Scheme of Control Agreement to regulate the market regime, why still need to interfere power companies' own financial decision?

In my opinion, most politicians seldom represent our true views. They always have bias. They never make sound and realistic suggestions for the goodness of Hong Kong. For example, they seldom criticise Towngas. It is unfair and I don't know why. Towngas' increases in tariff has been much more drastic than the 2 power companies. Towngas' tariff is much more unreasonable and expansive amongst the other household bills. But I don't know why no one politician voices out, no one politician fight for consumer to reduce the gas tariff.

I therefore demand the government to withdraw this unreasonable proposal.

Best regards,

Ivan Ho

Secretary for Economic Development and Labour Bureau  
Economic Development and Labour Bureau  
2/F., Central Government Offices  
Main & East Wings  
Lower Albert Road, Central  
Hong Kong

Future Development of The Electricity Market in Hong Kong

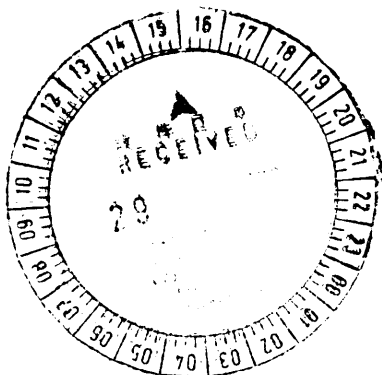

Dear Mr. Ip,

I am writing to express my idea of the future development of the electricity market in Hong Kong.

In my view, there is no point to change the current regime for the post-2008 regime since it has proven record in regulating the power company. Also, it is simply not logical for the people in Hong Kong to try something new if there is no sure-fire assurance. In fact, I have no complaint on the tariff arrangement and the electricity supply reliability at present.

We all know that a reliable electricity supply is very important to our daily life because we all live and work in high-rise buildings. However, we should also know that the high electricity supply reliability comes from the continuous investment from the power company in Hong Kong. Without continuous investment in the electricity infrastructure, the electricity supply reliability will deteriorate.

In view of the importance of electricity supply to everyone in Hong Kong, I urge the Government to provide sufficient incentive to the power company for maintaining a reliable electric system after 2008. I suggest the Government to maintain the current regime in the post-2008 regulatory regime.

Yours faithfully,

Ivan Wong

28 March 2006

Economic Development and Labour Bureau,  
2/F., Central Government Offices,  
Main & East Wings,  
Lower Albert Road,  
Central,  
Hong Kong

Dear Sir,

My views on Future Electricity Market Development in Hong Kong

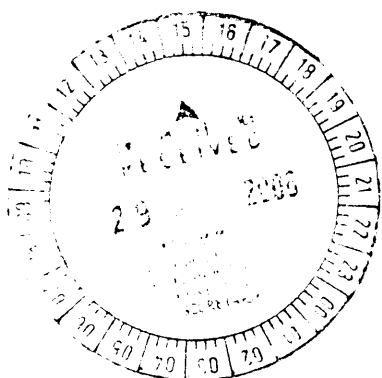

I think that the current Scheme of Control Agreements is functioning properly so that all the Hong Kong citizens could enjoy a high standard of supply reliability at reasonable prices. I support the Government to continue to use a legally binding bilateral arrangement between the Government and each of the power companies. The Government will have to ensure there are sufficient incentives for investors to invest in power industry such that a high standard of supply reliability could be maintained.

In the new economic regulation, it is proposed that the permitted rate of return will be greatly reduced and the regulatory period will be shortened. In my opinion, these items will decrease the incentives of any further investment in the power industry. I am afraid that these could put an end to Hong Kong having a high standard of supply reliability. Therefore, I suggest that the Government consider the mentioned items prudently.

Yours truly,

Ivan Yeung

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Ivi Pao

Hong Kong

**Subject: Government's Consultation Paper on the Future Development of the Electricity Market in Hong Kong**

Dear Sirs,

I would like to express my personal views in regards to the Government's consultation paper on the future development of Hong Kong's electricity market. I want to focus particularly on two issues, one being the proposal to lower the current rates of return and the second on return for emissions controlling equipment.

**Rates of Return**

I am concerned about the possible impact on the reduction of rates of return on electricity related investment. Having lived in Canada for over 15 years and being caught in the 2003 blackout affecting major cities such as New York and Toronto, I have been more than satisfied with the electric stability that has been made possible by the two providers in Hong Kong. I can still remember my younger days when brownouts or blackouts are frequent occurrences in Hong Kong that adversely impact the safety of our residents and interrupt commercial activities.

Considering that the rates of return are before financing, the current trend of increasing interest rates will only further diminish the incentive to continue investing in the electric sector. To balance with the need of affordability, my proposal to the Government is to consider a smaller reduction in rates of return to balance the need for investment and the need for affordability.

It is vital to our economy and the safety of our residents that a certain level of oversupply be maintained in order to prevent brownouts or blackouts and the continuing investment in the electric sector is paramount to achieving this overriding objective. What would be the point of paying cheaper rates if we are getting inferior level of services from our providers.

### **Environmental Considerations**

Although I do not have the evidence to support it, it is obvious that the pollution situation in Hong Kong has been worsening for the past decade and I am sure that there are plenty of independent studies that would support that conclusion. Obviously, there are a myriad of factors contributing to the worsening pollution situation in Hong Kong, it is however the Hong Kong SAR Government's core responsibility to do its utmost to improve the situation as it affects the health of all of its residents and the future competitiveness of the city.

Looking at the Government's consultation paper, it is proposed that the lowest rate of return be applied to equipment for emissions control. Although I am not familiar with how effective are these emissions controlling equipment, I can only assume that they will have a positive impact on our environment. If that is indeed the case and I am sure that the Government will impose stringent criteria to qualify what type of equipment would be considered environmentally friendly, I fail to understand why we would not be rewarding such behavior but penalizing the provider for trying to control pollution. This proposal is clearly in contradiction with the Government's core responsibility to improve the environmental situation of Hong Kong. In fact, the Government should do its utmost to encourage the investment in environmentally friendly equipment.

Yours sincerely,

A handwritten signature in black ink, appearing to be 'Ivor Chow', written in a cursive style.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Stage 2 consultation on Electricity Market

☐ Urgent ☐ Return Receipt

Dear Sirs,

During the stage 1 consultation, it is proposed that the tariff is subject to annual review and Govt approval will be required. Although it suggests that the approval will be made taking account many factors like the cost of providing the service, the guarantee return of investment and so on. Its just not fair to have a direct control by gov t on the price! As we know, there is no price control (I would consider this is price control if the service provider has no authority of determining its price subject to market condition and operation cost) on other utilities, like town gas, transport (Bus, MTR), why electricity supply has no such exemptions? Is there any reasonable ground? It is definitely harm the incentive of the investors of this industry, which indirectly affect the service stability and quality in the long run.

☐ Urgent ☐ Return Receipt

In the consultation paper, the proposed regulatory period is 10 years, i.e. 5 years shorter than the existing provision. With shorter period of guarantee return, I am worry that the reliable of supply is compromised. I see no advantage of 10 years plus 5-year option over the existing 15 years. As security of supply is the no. 1 criteria, it is acceptable to have a 15-year regulatory period to foster stability to all stakeholders.

I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Future Electricity Market Development - Stage 2 Consultation  
☐ Urgent ☐ Return Receipt

Dear sir,

For the above consultation, attached please find my comments.

J Man

JMan.doc

28 March 2006

Economic Development and Labour Bureau  
2/F., Central Government Offices, Main & East Wings  
Lower Albert Road, Central  
Hong Kong

Dear Sir,

Future Development of the Electricity Market Development in Hong Kong  
Stage II Consultation

I am able to enjoy quality electrical services at reasonable prices because of Hong Kong ' s current regulatory regime. Hong Kong is one of the forerunners in electrical supply services, and I am extremely pleased with the level of electricity supply reliability that I am currently able to experience.

There is no doubt that I completely agree with the Government ' s statement regarding the importance of reliable electricity supply. I concur that the focus of future electrical market development should be on sustaining the reliability of electricity supply, yet the proposals in the consultation paper bring up some changes that may turn out to be unconstructive for the electricity market. Reducing the regulatory period from 15 years to 10 years and reducing permitted return from 13.5% to 7-11% would impinge on the reliability of electricity supply - such proposals would discourage continued investment in the electricity infrastructure.

The Government should examine the proposals in the consultation paper with caution. I hope that Hong Kong will have the chance to continuing providing its citizens with quality and reliable electrical services.

Yours truly,

**J Man**

Subject: Comment on Stage 2 Consultation Paper on Future Development of the Electricity Market in HK

☐ Urgent ☐ Return Receipt

Dear Sir,

In response to the above consultation, we wish send you our views for your consideration.

Actually, the present SCA is confirm effectively after long time operate. We hope the Government will give a serious consideration on the issue before any firm up the policy.

Best Regards !

W.C. Kwok  
e-mail:

SOC stage 2.doc

To: Secretary For Economic Development and Labour Bureau

14<sup>th</sup> March 2006

Dear Sir,

STAGE 2 CONSULTATION PAPER ON FUTURE DEVELOPMENT  
OF THE ELECTRICITY MARKET IN HONG KONG

In response to the Stage II Consultation Paper, we would like to comment as follows:

1. Policy Objective

Basically we agreed with the policy. However we should consider that what the most essential element with the electricity supply is. From my point of view, a stable, reliable and safe electricity source is the most important issue on top in a fully developed city like Hong Kong. Sure, most of the public are happy with the electricity tariff can reduce as lower as possible. But we should remind there is no free lunch in the world. You can not ask for a high quality service without paying a reasonable price.

2. New Supply Sources

It is impractical to looking for a new supply source at this moment. Somebody had suggested importing supply sources from Mainland. But most of all known that as the high speed develops and tightly electricity demand in Guangdong, can Mainland prepared sufficient surplus electricity power transmit to Hong Kong is another important issue we should consider. The most secure way is maintain certain surplus capacity by our own not by others.

3. Renewable Energy

As the topographical constrains and limitation of Hong Kong, to establish a renewable energy seems face a lot of difficulties. Not only the space problem, even the technique still on developing. The costs both on equipment and construction are still compare at high side. Unless the technique is fully developed otherwise we shall face the impact of costs.

4. Tariff and Return

From my point of view, the tariff and return under the present Scheme of Control is consider reasonable. Compare with other countries, for example a city similar with Hong Kong, "Singapore" the tariff is even higher than Hong Kong. Of cause everybody wishes pay the less and get the most, but as said on above if we wish to

have a quality service we should pay what we wish to get. Do not forget **A quality service has a cost.**

On the other hand the reasonable return is an essential consideration for every commercial activity. Electricity provider is also a commercial operator. Under the present Scheme of Control Agreement (SCA) the 13.5%~ 15% return is consider reasonable for the investors. In the consultation paper page 15, chapter 2.37, we agreed Electricity Business is capital intensive and require long lead time for planning and long pay-back business. The current bilateral agreement “15 years” is a proper period for all parties. From economic point of view, no investor will interest on a business which with a return only few percent. On the other side, that will more easily for the operator to get a better financial arrangement and planning the future. A shorter period less than 15 years is not suitable with the situation in Hong Kong.

Hong Kong is a well developed city; electricity is an essential energy for everyone. The reason for we can enjoy a modern living here is depend on a reliable, safe and efficient energy supply supported by an effective SCA behind which already operated long time ago. We should think deeply before any changes of current SCA, unless we can afford the impact.

W.C. Kwok

I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Comment on Stage II Consultation Paper on the Future  
Development of Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Dear Sir,

I would like to offer my view on this consultation paper as follows:

1. First of all, I see a lot of jealousy regarding the profits earned by the two power companies and there is obvious pressure to cut their profit by lowering the rate of return. However, please look at the earnings of the major blue-chip companies this year. Are they earning less than the two power companies this year? No way! Shall we seek ways of limiting the profits of the major banks? This is definitely not the way Hong Kong should operate. The existing ROR for the two power companies is reasonable.
2. Linking the ROR to environmental performance. Again, this appears to be a grand idea but first look at the fairness behind. If we are going to impose this on the power companies, then the same requirements should be imposed on the public transportation companies, the gas companies, the oil companies etc. When the power companies are asked to observe those environmental discharge limits and they can comply with these figures, that's it! If the power companies are not performing sufficiently well environmentally (in fact, not up to the expectation of the public), then tighten the emission limits. This is the simplest and most effective way of controlling emission from the power stations. I do not think that the power companies dare to breach the emission limits set by the Government.
3. Tiered ROR? Again, fairness has obviously not been considered when putting this proposal forward. Imagine what the economy can be if the Hong Kong Bank is asked to limit its profit below 10% for just part of its operation. No doubt that the whole economy of Hong Kong will collapse overnight! When the ROR in some countries is regulated to below 10%, please think of! the other support that their Government is giving to the power companies - a controlled fuel price is obviously the most essential element.
4. Finally, considering the size of investment a 15-year contract is about right. Shortening it to 10 years is unnecessary.

On the whole, the existing scheme of control works well for years and does not need to be altered.

Yours faithfully,

Jack CM Chiu

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

24/03/2006 20:10

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

What happened to the clear, blue skies we used to have? There have only been about 5 days like that since last summer when they used to be all the time. Now I am lucky if I can see the islands in the bay let alone the blue sky. What is this doing to us and more importantly our children?

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Jackie Baker

Subject: Feedback on Stage 2 Consultation Paper

☐ Urgent

☐ Return Receipt

Dear Sir,

Please find enclosed my comments on the Stage 2 Consultation Paper.

Jackin Jim

Response to Stage 2 Consultation.doc

## Feedback on Stage 2 Consultation Paper

In general, I agree with the proposed arrangements of the Stage II Consultation Paper. With respect to certain headings, I would like to say a few words as follows : -

### (1) Supply from the Mainland

There is no free lunch. Although buying cheaper supply from Mainland may have certain effect for regulating the price of electricity in the local market, there are some drawbacks which have to be taken into consideration :-

- The Mainland suppliers own their privileges of maintaining low production and distribution costs because of the relatively low labour and material costs in the Mainland. Such privileges may diminish in the long run due to the launching economics of Mainland, particularly the Guangdong Province where the growth is remarkable in the last decade. In the event our investment on local power generation facilities is halted to give way for the imported supply, it may create a difficult situation when the Mainland suppliers revert to their Mainland market when the demand there is high.
- Another reason why Mainland suppliers could maintain a competitive production cost is that the relatively loose control on environmental aspects by the PRC Government. The more consumption from the Mainland will unavoidably worsen the air pollution in Hong Kong. as what we have experienced in the past few years. There is no boundary in the sky and the pollutants will be carried by the wind from the north.
- While power generation itself is the major part of the costs, distribution network (grid) development and its maintenance also constitutes a high proportion of total tariff. It is considered unfair to the two power companies in Hong Kong to open arbitrarily their grids to the Mainland suppliers who share the fruit of others without effort. It is difficult, if not possible, to obtain a balanced and reasonable compromise between all three parties, the Hong Kong Government (HKG), HEC/CLPP and Mainland suppliers.

Instead of creating competitiveness to the two existing local power companies, I consider the Government of Hong Kong may act as a wholesaler / middle-man so as to allow a “win-win” solution.

My initial idea is that HKG may set up an official body for negotiation and purchase of electricity from Mainland suppliers. HKG may then sell the electricity to HEC/CLPP at cost for to replace a certain proportion of locally generated electricity. Through this arrangement, the following benefits could be obtained : -

HKG, because of its official status, is in a better position to negotiate with Mainland suppliers (and Mainland Officials as well) for more stable and quality supply with matters regarding ER and environmental protection, etc., all these shall form part of the deal.

- To HEC/CLPP, it is not a price competition at all but a source of cheaper wholesale / raw-supply aided with HKG instead of generating all their own electricity at higher costs. HEC/CLPPs' total market share are still 100% and substantial reduction in return can be avoided.
- As HKG is acting as the role of a wholesaler, a negotiated settlement between HKG and HEC/CLPP on future power plant investment will more likely be made. Once the supply from Mainland ceases, the deficit can be replaced by the supply generated locally in a planned manner.
- Hong Kong citizens will enjoy savings from electricity price with the indemnity from HKG and HEC/CLPP whose capacity as the supplier (retailers) remain unchanged.

## (2) Permitted Rate of Return

It is well-known that Permitted Rate of Return is described as a "Secured" Rate of Return, particularly when the economic climate is not good. People often blame that it is an unfair deal between HKG and electric companies, scarifying the interests of the majority. When the average return from other business is declined, the louder the sound of complaint it is.

Compared with other investments (except property development), I concur the existing rate of 13.5% is high as the risks associated with power supply business is relatively low. Hence, I am in favour of reducing the rate to 7-11% as proposed in the Stage II Consultation Paper. Notwithstanding that, in addition, I agree that the Rate of Return shall be linked to the other economic indexes.

HKG should have learnt from the lesson of over-salary of civil servants. Back to Early 90's when the economic condition was good, people in the private labour market were all enjoying the fruit from economic growth. At that time, civil servants were complaining their increment was below average and many of them had chosen to leave the team and joined the private market.

In the contrary, since the drastic drop in the private market after 1997, salary of Civil Servants became unrealistically high because there is not a mechanism (or there is one difficult to implement) to cut it down to normal. People keep complaining again.

The message is simple. It is not possible for any government to obtain a harmony always to the satisfaction of the other two parties which are in opposite position based on fixed terms.

As such, I strongly concur the permitted rate of return shall be floating instead of fixed. In fact, I could not see any reason why the rate shall be fixed in anyway. The funding of the two electric companies is mainly local. It is not likely they will loose their interest to keep investing in Hong Kong's power business and divert the money to other businesses and markets when the overall economic condition is not good, providing rate of return is still comparable to those generated from other investment portfolios of similar risk levels. No one will give up a cash-cow simply because of short-term difficulties.

On the other hand, when the economic condition is good, there is not reason for Hong Kong people to envy the utility undertakers for making handsome profit, provided always the rate of return is still in line with the general market trend.

### (3) Renewable Energy (RE)

In principle, I strongly agree the use of ER as an alternative to traditional fossil generated power. Due to the topographical limitations, I believe the only practicable source of ER shall be from burning of waste.

While I appreciate the recent trial of HEC in building a wind-power generator for the sake of promoting environmental protection awareness, it is not worthwhile to spend further resources for research of solar, wind, tidal and hydro energy whatsoever, after all, Hong Kong has a population of 6.8M in a tidy place of only 1,100 km<sup>2</sup>.

On the other hand, I trust ER from burning of solid waste is the only way out. Despite the cost of power generated from this mean would probably be higher that generated from fossil fuel, the increase in cost can be offset by the savings from the treatment of waste which costs not only money but our precious land resource. In fact, as mentioned in (1) above, I consider the saving from purchasing power from Mainland can also be used for subsidizing the cost for developing ER from burning of waste.

### (4) Institutional Setup

No matter what the institution of the setup it may be, I believe that the utmost importance for maintaining a good electricity supply system to the benefit of Hong Kong people is to prevent the matter from being politicized.

In the recent years, politicians tend to step into whatever subjects irrespective to their lack of expertise. Sometimes, good things for the well-being of Hong Kong were turned down or have to be aborted because of political pressures. Such undue influence from politicians is detrimental to long term development of electric supply system of Hong Kong.

I agree the setup of the organization or bureau monitoring the electric supply of Hong Kong shall be formed on a broad-base from all walks of life. However, the members shall only be professionals and experts with sound knowledge and background in the areas relevant to power supply issues. Moreover, the organization shall be independent from LegCo during the review and implementation of power supply policy.

5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

每 Stage II Public Consultation 販誠?薯序 帑 腔追程 每 菴媼蕙  
僂鼠?烷?

☐ Urgent ☐ Return Receipt

Attached is my comment.

Comment on Hong Kong SAR Government Stage II Consultation -.pdf

**Comment on Hong Kong SAR Government Stage II Consultation Paper on  
Electricity Reform  
By Jacobus W. S. Ngai**

The Stage II Consultation Paper shall lead to open market in Electricity Industry in Hong Kong down the road. The followings are my comment to the consultation paper.

**Renewable Energy**

The largest source of renewable energy in Hong Kong shall be municipal waste and sludge (from sewage treatment plant) incineration plant. The estimated power output shall be more than 50 MW. That is the underlining reason for the government to propose renewable energy access to the grid. If the both power companies are obligated to buy half of the power from this plant, both power companies shall increase in sales but without capital asset growth, part of the earning shall be kept in the development fund. The other renewable energy shall be deterred by the proposed rate of return capped of average 9% of both power companies. As we all understand, wind and photo-voltaic energy are relatively expensive than conventional electricity generation method such as coal and natural gas, the lowering of rate of return means lowering the tariff, how can wind and photo-voltaic energy be viable to maintain a competitive edge?

**Energy Supply from Guangdong**

It is totally viable. There is news in State Power web-site; Southern Grid shall be selling 1.3 billion kWh annually (starting October 2006) to Vietnam at a price of 50 million USD few dates ago. The cost per kWh is approximately 0.3 HKD. Third party can build its own network to re-sell electricity from Guangdong as long as they can sign a contract with Southern Grid (or form a joint venture) in Hong Kong under the existing Electricity Ordinance and not subject to the Scheme of Control. The initial target of the third company can be the 2% growth in demand of electricity of China Light & Power each year. CLP shall keep its existing revenue but without capital growth, under the SOC, the permitted return shall be reduced each year due to depreciation in net asset, it subsequently lead to reduce in tariff.

Somebody may argue that there is still power shortage in Guangdong and how can they sell power to Hong Kong. However, if we look carefully, 2% growth in CLP is approximately 200 MW compared with peak demand of 45,000 MW (2005) of Guangdong Province, 200 MW can easily shift by peak shaving technique to achieve.

**Reliability Issues**

The reliability of electricity in Hong Kong in most case is 100% if we take into account of the standby generators installed (even in residential buildings) in Hong Kong. Therefore from the adequacy of generation resource point of view, the reliability is 100% in Hong Kong. However, the proposed new rate of return in transmission and distribution asset of 7% shall lead to sluggish in investment in transmission and distribution network. The investment in T&D asset always take a longer return aspect than generation asset as the investment depend largely on the area economic growth (localized) rather than the average economic growth, there is always

overcapacity in T&D investment, and this over-investment has to be shared between customers. With such a low return, power companies take longer payback period for their capital invested; they will push back their planning horizon until there is really a need in adding new substations and circuits. The security aspect of reliability shall be jeopardized.

### **Rate of Return**

The average rate of return shall be dropped to 9% in the Stage II Consultation Paper.

If we take a look in US, the recent approved rate of return by FERC is return of common equity at 13.5% with debt to equity ratio of 50/50 for some transmission projects. Wholesale power market in US is open for competition, however the accounting rules of Generation Companies still regulated by FERC, the delivery part of electricity power is regulated either by FERC or individual States commissions. We can see that the rate of return is double digit even after market is open for competition to attract investment.

The rate of return in Ireland and New Zealand are also around 12.5%. Their calculation of rate of return is based on WACC in commercial sector plus inflation rate.

If we discount the inflation rate from the 13.5% in the past, the investment in power in Hong Kong is not very attractive. Therefore both power companies develop real estate projects to compensate the lower real rate of return in the past. Of course, Hong Kong faced deflation in last couple of years, both power companies enjoy higher real rate of return. From the fairness of point of view, the rate of return shall be varied in certain period of time according to nominal rate of return in commercial sector in Hong Kong plus inflation rate instead of a fixed rate of return for complete contract period of SOC.

Furthermore, the rate of return proposed for environmental measure invested by both power companies is too low and not fair to either power companies. The FGD invested in units 6, 7 and 8 of The Hong Kong Electric Co. Ltd are part of generation asset and enjoying 13.5% return already, shall the government take out this asset and re-calculate the return? One of the reasons in open the power market is to keep the tariff high enough to get consumers reduce their demand. Low the return in environmental measure is not a clever move.

We need some motivation for the third party to join in the competition of electricity market and until then high rate of return is needed.

The approach by New Zealand and Ireland to fix the rate of return is fair. SAR Government shall study their approach carefully, besides the debt/equity ratio shall be fixed at certain ratio so that the financial leverage can be governed.

### **Gas and Electricity**

The gas fired distribution generation technology combine with heat, cooling generation (Building Cooling Heating and Power) is getting more mature and popular

now after the Black-out in August 2003. It is more energy efficient, less carbon dioxide to be produced, save the loss in transmission and distribution of electricity. With the availability of pipeline natural gas from October 2006, the DG using natural gas is totally viable in Hong Kong. Here are some interesting figures, normally a 1000 kW gas fired diesel engine can generate 250 tons of cooling capacity using absorption chiller (250 tons cooling capacity can cool 25,000 sq ft of commercial complex or 60,000 sq ft of office building in Hong Kong). 250 tons of cooling capacity needs 375 kW electricity, which means 1000 kW gas fired diesel engine can displaced 1375 kW power supply from power companies. With some engineering effort, an environmental friendly solution to power supply in Hong Kong can be derived from natural gas.

Town gas in Hong Kong already take their initiative in competing with the power companies in reducing the electricity demand (increasing their demand) by drying the in-take air of some air-conditioning system using heat pump or gas dried dehydrating material other than cooking and water heating.

### **Regulatory Authority**

SAR government shall setup a regulatory body same as OFTA in administration all matters about electricity and gas instead of administration by ESB. The organization of this regulatory can be copied either from FERC in US or OFGEM in UK.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Walking through Hong Kong is like walking through a chimney and the example of a runner collapsing after running in a marathon in Hong Kong is a frightening example of what may happen to us over the course of the next years.

If nothing is done to improve the situation drastically, then our future remains grey and sickly.

As a final note, my husband and I have lived very happily in Hong Kong for the past 10+ years, but we are becoming more and more concerned about the air we breathe. This concern is especially high because we have two young children.

Please, please clean up the Hong Kong air. It is very sad to see HK receiving negative publicity for something that can be "controlled".

25 March 2006

Economic Development and Labour Bureau  
2/F., Central Government Offices  
Main & East Wings  
Lower Albert Road  
Central  
Hong Kong

Dear Sir,

Stage 2 Consultation  
Electricity Market Development

I understand that you are promising to lower the future electricity tariff by lowering permitted rate of return of the two power companies from the present 13.5% to 7-11% after 2008.

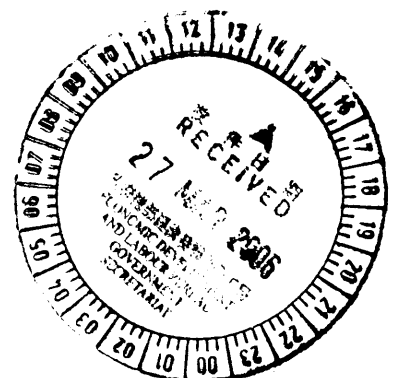

I worry that with such a large reduction in permitted rate of return (up to 50%) the power companies will have no incentive to continue to deliver their quality service and the future reliability level will be much lower than the present 99.99%.

As an electricity consumer, I of course appreciate lower tariff. However, we must strike a balance between tariff and supply reliability. I opine that drastic change in permitted rate of return, like your 7-11% proposal, should not be considered.

Yours faithfully,

Jacqueline So

Subject: We want clean air!  
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Jacquelyn

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

I am a Hong Kong Permanent Residence and a business owner. I have lived in HK since 1996 and love it as my home. I am a significant contributor to the Hong Kong economy. I have noticed the deterioration in air quality in the past several years and it is of great concern to me.

I am currently working in Shanghai with my joint venture company. My family are with me. We are due to return to Hong Kong in the summer of 2007. However, my deep concerns about the air quality in Hong Kong are forcing me to evaluate whether I can risk bring my two young children back to this polluted environment. I may be forced to sell my HK property and relocate to another country in Asia. This would be very sad because all my family consider Hong Kong to be their home.

I know for a fact that many other business people are making similar evaluations as mine. This is not good for the future of Hong Kong.

Lower Albert Road, Central,  
Hong Kong.

Dear Mr. Secretary,

With reference to the consultation launched on Future Development of the Hong Kong Electricity Market, I would like share my views with you on some of your proposals.

Among all proposals, I am most uncomfortable with the following 3:

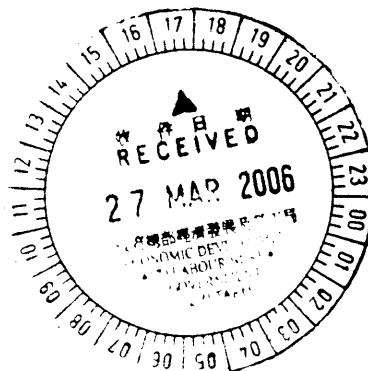

- reduction of the permitted rate of return to the 2 electricity companies
- establishment of a multi-layer rate of return system
- shortening of the regulatory regime duration

All these proposals will inevitably complicate the regulatory regime, increase investment risks and reduce incentives to investors. As such, the electricity supply reliability is bound to suffer deterioration. Is that what we would like to have in the post-2008 era? Can we afford blackouts?

Yours truly,

James Lai

I used to have a friend (now deceased) called Meiring Smith. He sold anthracite from South Africa to CLP. Anthracite is a far cleaner burning coal than what the electricity generating thieves currently use. They are putting profit before the Health of Hong Kong people and other people in the Pearl River Delta. The simple way to stop this is the 'polluter pays' with no possibility of tariff increases. This will soon cause a change. I believe that there is the intention to bring in gas through a pipeline from China that is being constructed by Leightons. Meanwhile, charge them for their emissions, perhaps Mr Kadoorie and Mr Li Ka Shing will then get the message.

Subject: Views on Electricity Market Public Consultation  
☐ Urgent ☐ Return Receipt

After reviewing the "Consultation Paper on Future Development of the Electricity Market in Hong Kong Stage II Consultation", I have the following comments:

1. Reliability and safety of electricity supply are of paramount importance and should continue to be the primary objective in the future development of the electricity market in Hong Kong.
2. Introducing another supply source from Mainland is not feasible in a small market in Hong Kong. Interconnection to our existing network will create unpredictable risk for reliable and safety electricity supply.
3. The current 15-year period for SOC is reasonable while 10-year period would be too short and unfair for electricity companies with capital investments with at least thirty-year life. Unnecessary administration would also be created in such a short period.
4. The proposed "Varying Return for Different Types of Assets" is a numerical game. An easy calculation method (i.e. one single rate for all fixed asset) with an open and reliable review system is enough.
5. The price of electricity is reasonable for the living standard in Hong Kong. The existing 13.5% return rate is acceptable.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

23/03/2006 11:20

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the severe deterioration in air pollution over the last ten years.

1) As a first measure I would recommend that tax and economic incentives be provided for power plants to install and upgrade all relevant pollution controlling equipment - scrubbers, flue desulphurization equipment, etc. where these are not already in place, and that penalties be imposed and return reduced for plants that fail to meet emissions targets.

2) As a second measure I would urge the Government to provide incentives for investment in solar power and other ecologically appropriate renewable energies, including permission to earn a higher rate of return from power generated renewably. In the case of Hong Kong solar power probably works well, but I would urge caution with wind farms given the large number of rare birds and eagles in HK and the importance of the Mai Po sanctuary to preserving biodiversity in the Pearl River Delta, one of the few biodiverse ecosystems left in Southern China

3) As a third measure I would urge the Government to take conservation more seriously. Hong Kong's night skyline is certainly beautiful, but there is no need for example to have buildings lit up with enormous upward-pointing beams that only light up the sky and waste electricity unnecessarily. Lighting up a building can certainly serve a purpose, but lighting up the sky is wasteful of energy and increases light pollution. We want our children to be able to see the stars like they can even in big cities like Singapore. So I would urge a complete ban on upward facing lighting and severe fines to enforce it.

4) I would urge the Government to quickly study the source of Hong Kong's most severe and visible pollution. The biggest problem is likely to be found to be not power stations which can be made reasonably clean, but the myriad of dirty little diesel generators powering every factory across the border, and the reason all these exist is actually a lack of sufficient large power plants to supply power to all the light industry. The factories deal with unreliable power by building their own dirty generating capacity, and we get to breathe the resulting particulate emissions and have them cloud our skies, irritate our lungs, and make people sick. We all notice that when China takes a break in October the skies suddenly become clean, yet the powerplants that supply HK are still running. So I suspect the study will quickly prove that most of the problem is China.

5) Armed with the results of the study, I would urge the HK Government to take an aggressive stance both in negotiating and coordinating with the

Guangdong government, and in naming and shaming the HK based owners of most of the dirty factories across the border. With modern satellite imagery it should be very easy to identify a few big culprits through the clouds coming out of their smokestacks and shaming them in the HK press into cleaning up their act. And it may be that part of the solution is to build a few more clean power plants to remove the incentive for factories to use small dirty generators.

I demand that the SAR government brings Hong Kong clear skies and clean air.

I look forward to hearing from you.

Yours sincerely,

James R de Castro

I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air! PLEASE!

☐ Urgent ☐ Return Receipt

22/03/2006 15:05

To: Economic Development and Labour Bureau

As a frequent visitor to Hong Kong, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;

2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;

3. The investment in renewable energy should earn a higher level of permitted rate of return;

4. The targets and time-table of reduction in coal burning should be set;

5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;

6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you for this will greatly impact my future trips to an otherwise beautiful city.

Yours sincerely,

James Szuszkiewicz

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

31/03/2006 09:21

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!  
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Jan

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 我要清新空氣

☐ Urgent

☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

cc:  
Subject: Stage II Consultation on Future Electricity Market  
☐ Urgent ☐ Return Receipt

I'd like to offer the following views in response to Government's Stage II Consultation Paper.

#### Tariff

There has been a lot of discussions about reducing tariff. I live on Hong Kong Island and its tariff is 30% higher than in Kowloon. If there is a way to bring the tariff to the same level, I'd appreciate it but it must not compromise on reliability. Last time, when my refrigerator was out of order, I lost all the food inside which cost more than 6 months of the electricity charges I made. A reduction in tariff is not my primary concern but reliability is. I cannot afford to wake up one day and find that I had to walk all the stairs to go back to work.

#### Environment

Hong Kong's air quality problem is not caused by Hong Kong alone. The major source of pollutants is from the Pearl River Delta. Anybody who travels across the border can witness to that fact. The measures proposed by EPD such as cleaner fuels and higher specifications on vehicles and environmental retrofits in power plants will only increase our costs and make Hong Kong less competitive. We have been beating around the bush by not facing up to the fact. If we can have any influence at all, we should try to help Guangdong to clean up, even by paying a subsidy but must ensure that they deliver the results. Until then, all the measures we put in in Hong Kong will see little improvement in the overall air quality.

#### Renewables

This is something for the future if technology further develops and not practical now as Hong Kong has limited land. To give a higher return to renewable energy will encourage expansion of the asset base and allow the power companies to earn even more. At the end, they would still have to build conventional plants to ensure reliability. This is certainly contradictory to the desire to lower tariff.

#### Return

To give differential return for different type of assets will cause problems in monitoring the books of the power companies and introduce more complexities into the regulatory regime. I certainly do not agree that environmental improvement to coal plants be given a lower return. This will incentivize the power companies to switch to gas and retire the useful coal plants prematurely. Again, this is contradictory to the tariff reduction objective.

#### Duration

The proposal to shorten the duration will increase risk to the power companies in making long term commitments to fuel purchase and making other necessary investments for the long term. Given the shortage of power in China, Hong Kong may lose out in the competition for fuel or have to pay a higher cost to obtain fuel in the world market. We have to be mindful of the fact that Hong Kong does not have natural resources.

## Open Market

Open market by introducing just one new supplier makes no sense. The fact that Guangdong needs to buy power from Hong Kong speaks for itself. Guangdong is behind Hong Kong in its environmental regulations and enforcements and their power plants are of much lower standards and efficiency than in Hong Kong. Coal prices in China is still being subsidized by Central Government. For Hong Kong to expect having cheaper electricity from mainland and yet have improvement in air quality is a fantasy. We can't risk our system's reliability if interconnection between Hong Kong and Kowloon cannot be achieved for the same reason. How can we interconnect with Guangdong and expect the same level of reliability.

## Conclusion

I hope that we have learnt our lessons through the bitter experience in the past eight years. Don't institute reform just for reform's sake. We have seen the problems created in housing (85,000 flats a year), in education (using mother tongue and others, the debate goes on and on), SARS, Article 45, etc. etc.

For heaven's sake, leave this to those who knows the business and don't meddle unless there is an absolute need. My 83 old mother lives on 27th floor and I don't want to hear from her that she cannot get to the hospital because the lift in the building is not working due to occasional electricity brown out. And I don't want to give up another load of food in my refrigerator in order to save \$30 per month. (That's what you promised, Mr. Yip, 10% reduction in tariff with all these). I'd rather move over to Kowloon to save more, if that's the case.

Yours sincerely,

Janet Tang  
Hong Kong Island

I work as a tour guide & believe me, this situation is very damaging to our reputation around the world. We should be ashamed that we are becoming more famous for our disgusting air than anything else.

As a parent I also would like to be able to take my daughter to any part of town, whenever I wish, without worrying about air quality- a few days ago, I had to decide against shopping in Causeway Bay as this would have been a very unhealthy activity for us - such a situation is also bad for retailers in affected areas.

Time to clean up!!

葉局長：

### 第二階段諮詢意見

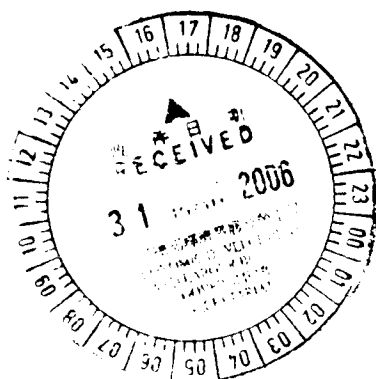

關於貴局的電力市場第二期諮詢文件，本人十分認同政府提出的政策目標。不過，本人對以下幾點仍有所保留：

(1) 投資誘因不足，引致電力短缺

10年規管年期及7-11%回報率也許未能吸引投資而導致電力不足。這會對香港這個世界金融中心帶來極大的負面影響。

(2) 為四種不同類別資產採用不同的投資回報率

不論資產類別，在市場籌集資金時的成本理應相同，因此回報也應相同。再者，為鼓勵改善本港空氣質素，可再生能源及減排設施應提供同等投資誘因。

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong visitor, I am very much concerned about the air pollution caused by the power stations. I strongly request that government take the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;

2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;

3. The investment in renewable energy should earn a higher level of permitted rate of return;

4. The targets and time-table of reduction in coal burning should be set;

5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;

6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I request the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

25 March 2006

Economic Development and Labour Bureau,  
2/F., Central Government Offices,  
Main & East Wings,  
Lower Albert Road, Central,  
Hong Kong.

Dear Sir,

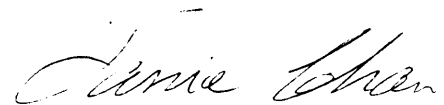

**Stage II Consultation of the Future Electricity Market in Hong Kong**

I understand that the government is conducting the second stage consultation on Hong Kong's electricity market after 2008 and I have the following comments to make:

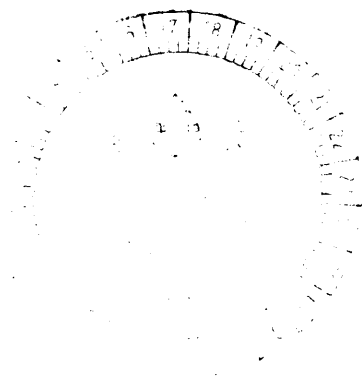

Any regulations for the future electricity market should maintain the highly reliable power supply we are having in Hong Kong today. Proposals that would decrease the reliability of power supply in Hong Kong should be avoided. I understand that the government is proposing to reduce the power companies' permitted return after 2008 and also proposes to shorten the period for the bilateral agreements with the power companies for the next regulatory period. These acts will decrease the power companies' incentives in investing in the industry and will decrease the reliability of power supply in Hong Kong. In order to maintain today's power supply reliability, I think the government should drop these proposals.

Thank you for your attention.

Yours faithfully,

Janice Chan

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

.....

### Clean Fuel

I supported to use more natural gas as the fuel for power generation in Hong Kong as the natural gas is one of the cleanest of all fossil fuel.

CLP should be encouraged to build the terminal to receive the Liquefied Natural Gas (LNG) to secure the gas supplies.

Janice Yan

.....

### Improve Air Quality

To improve air quality in Hong Kong, one of the solutions is to use more natural gas as fuel for electricity generation. It is clean and helpful to improve the air quality in Hong Kong.

CLP should be supported to import more natural gas as fuel and build the terminal to receive the Liquefied Natural Gas.

Janice Yan

.....

### Energy Policy

CLP has used a diversified mix of fuels for power generation while HKE mainly uses coal as fuel.

There is no clear policy for the power companies in Hong Kong to use what kinds of fuel for power generation.

The Government should define a clear ‘Energy Policy’ in the paper and devise a long-term power market development plan. The plan should be in greater detail as to fuel mix and source of new generating capacities.

Janice Yan

\*\*\*\*\*

\*\*\*\*\*

## Energy Policy

There is no clear statement on issues related to fuel mix and security of fuel supply for the power companies in Hong Kong.

The natural gas is one of the cleanest of all fossil fuels. The Government should support CLP to increase to use more natural gas for power generation to improve the air quality in Hong Kong.

To secure the gas supply, the Government should approve CLP to build receiving terminal to import Liquefied Natural Gas.

☐ Urgent ☒ Return Receipt

本人覺得香港作為國際大城市,有穩定的電力供應是非常重要的.因此我認為保障電力公司有合理的回報是適當.而且我認為本港的電費現還處於合理水平. 我反覺兩電應該於未來的日子積極發展再生能源,例如風力等.

**Consultation Paper On Future Development of  
The Electricity Market in Hong Kong (Stage II)**

Dear Sir,

In view of electricity supply is a basic necessity to the Hong Kong citizens and the future development of electricity market in Hong Kong is also a vital subject for every citizen in Hong Kong, I would like to give my comments on this subject.

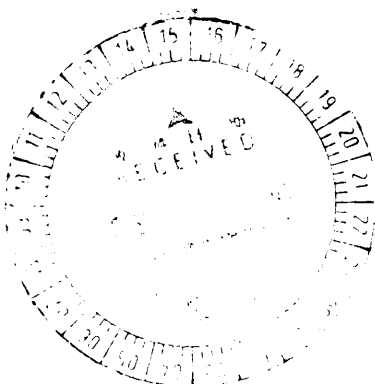

To foster the incentive for the power companies and to ensure supply reliability in Hong Kong, it should be very cautious for the government in determining the rate of return of the power companies in the post-2008 regulatory regime. Sufficient rate of return should be given to attract the long-term investment requirements for maintaining the electricity supply reliability. Otherwise, the electricity supply reliability will be jeopardized after 2008.

The proposal on different rate of returns on different type of assets is also confusing. From the investor viewpoints, there should be no differentiation between one type of assets and the others. The rate of return should be the same for all asset types within the power company. Therefore, this proposal complicates the regulatory regime unnecessarily and distorts investment incentives. Therefore, I urge the Government to adopt a single rate for all assets and provide sufficient financial incentives to the investors in the post-2008 regulatory regime.

Yours faithfully,

James Lee

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》  
☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 - 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Stephen Ip  
Economic Development and Labour Bureau  
2/F., Central Government Offices  
Main & East Wings  
Lower Albert Road, Central  
Hong Kong

Dear Stephen Ip,

Electricity Market Public Consultation (Stage 2)

Maintaining a good business environment is one of the core values that we must protect. Your proposal requiring tariff adjustments of power companies to be approved by the Government however may scratch this core value.

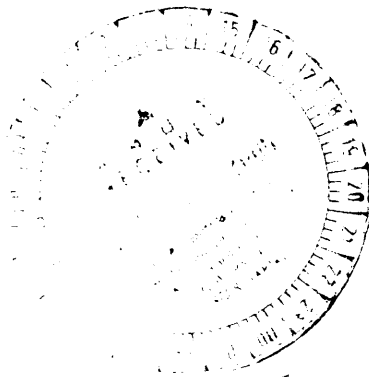

According to my comprehension, the most important spirit of economic regulation is to allow power companies a reasonable chance to recover their business costs and fair profits on invested capital through their tariffs. Putting tariff adjustments under administrative approvals rather than aligning tariffs with more objectively determined economic cost of supplying electricity, as I see it, is a pullback from the free economy philosophy.

Please withdraw the erratic proposal to require Government approval of tariff adjustments.

Yours sincerely,

*Jason Chiu*

Jason Chiu

27 March 2006

Economic Development and Labour Bureau  
2/F, Central Government Offices  
Main & East Wings  
Lower Albert Road, Central  
Hong Kong

Dear Mr. Ip,

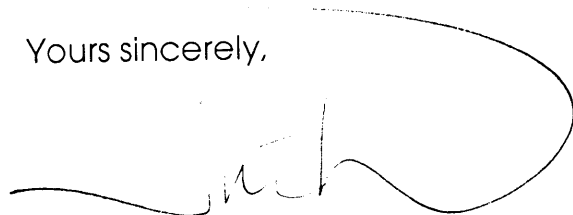

I fully support the Government to retain the bilateral agreement to regulate the power industry after 2008 as it is well proven and easy to implement.

The Government should provide investors with sufficient incentive to encourage them to continue their investment in the electricity sector so that the current reliability level can be maintained. The shortened regulatory period to 10 years and lowered rate of return to 7-11% will certainly violate the above objective due to the increased investment risks incurred.

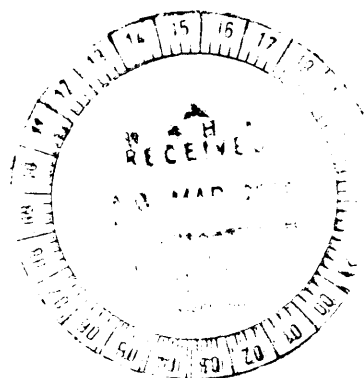

In addition, providing 7% rate of return for emission reduction facilities is obviously insufficient to induce necessary investment in these facilities. Such proposal cannot help in improving our future air quality.

Please be reminded that the existing regulatory regime in form of Scheme of Control Agreement has contributed a lot for the success of Hong Kong's power industry. It is highly recommended to retain this framework after 2008 rather than proposing a drastic change for this regime.

Yours sincerely,

Jason Chow

Subject: Asia's World Pollution City?  
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about air pollution in Hong Kong. Every year I am more and more dismayed by the declining visibility of our beautiful city and dare not think about what the health effects of this pollution must be on myself, my family and my fellow citizens. We all must share the same air and as such we should all have the right to expect a minimum standard that does not endanger our lives and our economic future. As a service based economy I find it unbelievable that we cannot do something to curtail the main sources of pollution in HK - power, industrial and vehicle emissions.

Of course, much of the pollution we experience comes from the wider Pearl River delta but we will never be able to engage our neighbours in a constructive and mutually beneficial pollution-reduction process unless we show an example and lead the way. What HK can regulate internally it should - if only to provide a springboard for a more inclusive regional anti-pollution action-plan.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Jason Scott-Lewis

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly ask the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

I beleive Hong Kong can be the most desirable city in the world if the pollution could be cleaned up. You take it for granted having clean air in other cities, until you see the situation here. I am unlikely to live any amount of time in Hong Kong once I have a family. This is a real shame as I think they would love the multi cultural environment but I cannot allow them to grow up in such poor quality air. All of my friends say the same and it is the number one reason they will not move here or what ultimately drives them away. You should make it your highest priority and do what ever is necessary to find a solution, not next year or the year after but starting today. Hong Kong is a wealthy entity, it can afford to fix the problem quickly, so why don't you? Find an alternative to Coal and force the power companies and industry to make the change - it's not an option, it's soemthing that needs to be done otherwise Hong Kong will slowly fall into financial decay. I for one would pay a "green tax" if all that money went into a determined and effective solution.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. The Hong Kong Government lead Asia as a testing ground for a hydrogen economy.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Jay

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Public Consultation

☐ Urgent

☐ Return Receipt

Hi,

I just want to express my views on the Stage 2 Public Consultation as a responsible Hong Kong citizen.

1. A 15-year regulatory framework is considered appropriate for a long term investment, without which how can fuel supply commitments be reached.
2. A highly reliable supply is essential to sustain the continuous development of Hong Kong. Loss of a reliable electricity supply will incur unforeseeable economic consequences.
3. A diversified fuel mix with coal to help stabilise long term electricity price, and natural gas to mitigate air pollution is a long term benefit to the community of Hong Kong.
4. Investment incentive for long term electricity supply industry is crucial to maintain reliable electricity supply. Too low a permitted return (say below 12%) will not attract long term investment and adequate forward planning of future power plant projects, and consequently detrimental to the development of Hong Kong as a whole.

--

Regards,

JC Lee

These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

jeanice huang

To : Economic Development and Labour Bureau  
Date : Mar 29, 2006  
Subject : Government Consultation Paper on Future Development of the Electricity  
Market in Hong Kong

I referring to the consultation, I would like to express my comments:

### **1. Policy Objective**

Hong Kong residents need a safe and reliable power supply for stable prosperities. The objective of the review should keep the supply reliability as top priority, followed by environmental protection as it is the world emphasis.

### **2. Proposed rate of return rate at 7%-11%, for different types of assets**

The power industry requires an intensive and long-term capital investment, it must provide reasonable and stable return in order to attract investors. The proposed return of 7% - 11% is not much different from other investments in Asia Pacific, it may not be attractive to encourage continuous investment in the power sector of Hong Kong. The proposed return should be aligned with the world standard and acceptable to the existing 2 companies.

In addition, since all asset types (generation, transmission and distribution) are an integral part of the whole power supply chain, they should get the same return rate. Otherwise, investment might be biased for certain asset class.

### **3. Environmental Protection**

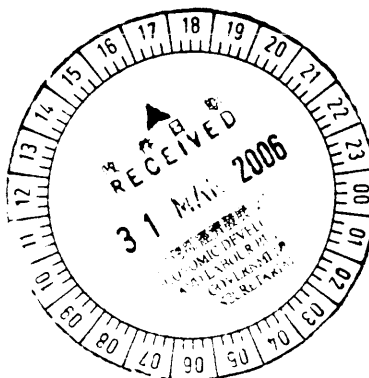

Environment protection should be the one of the key issues in future electricity development, however, any newly introduced regulation or policies must be achievable and acceptable in Asia's standard. The government should provide a clear guideline and help the 2 companies to achieve the standard.

### **4. Open Power Market**

Unlike USA, UK and Australia, Hong Kong is only a small city for open competition for such costly investment. Hong Kong needs good and responsible investors who are loyal to the government and residents, and willing to make long-term commitment. The government should have very detailed plan to study the open market in line with HK's economy, legal and expertise, otherwise, the open market may distort the supply reliability and stable tariff system. I suggest the government should withhold this open market scenario and take more time for good plan.

Best Regards,

Jeanie Chiang

Subject: 我要清新空氣

☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

**Stage II Consultation Paper on Future Development  
of The Electricity Market in Hong Kong**

Dear Sir,

I refer to the above subject and would like to give my comments about the consultation Paper on "Future Development of the Electricity Market in Hong Kong: Stage II Consultation" as follows:

1. Electricity supply reliability is vital for maintaining Hong Kong's competitiveness with other South East Asia countries as well as uprisng big cities in PRC. The tangible and intangible economic loss due to power supply failure would be much higher compared to the amount the community has been paying to achieve the existing high supply reliability.
2. While the Government welcomes new power producer to bring down electricity cost, how can it ensure the reliability of the new power supplier? Even though the amount of power to be supplied by the new player may be very small, supply failure from this new source may trigger cascade circuit trips, causing the entire SAR blackout. What provision will the Government have in the new PPA (Power Purchase Agreement) to ensure that the new power supplier will have sufficient amount of money put aside to bear the consequence of power supply failure due to their fault, and to compensate the existing two Power Companies when their power generation/transmission facilities are damaged due to the new player supply failure.
3. The Government policy on the new power producer is not clear. Will the Government sign a long term (15 years or more) Power Purchase Agreement with the new power supplier stipulating the quality (including emissions), reliability and the pricing mechanism? Or this new power supplier can choose to come and go any time and without any obligation? This is really unfair to the two existing power companies which have put so much effort in the past century to develop their generating and transmission capacity to match the rapid economic growth of Hong Kong.

4. The Government's proposal of the rate of return to be as low as 7% is unrealistic. As listed companies are responsible to its shareholders, I doubt if the management of the two power companies will choose to continue to invest with such a low permitted return rate. There are plenty of highly attractive investments available in the market both in Hong Kong and elsewhere.

Yours faithfully,

Jeffrey Kwok

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong - Stage II

☐ Urgent ☐ Return Receipt

Dear Government

Regarding the consultation, I would like to express my view below:

i) Reliability is the prime concern of me, I couldn't find any clear action or policy mentioned in the paper the Government would do or act to control or ensure the power companies to improve, or at least to maintain the current supply reliability. I think there should be a clear target on the standard of reliability.

ii) Environmental is always a hot topic in our heavily polluted city. However, being realistic, there is not much potential to develop renewable energy in Hong Kong. Rather than developing renewable energy, I would like to advise the Government to put more effort on the control of fuel. For example, we may set a maximum percentage of electricity being generated by coal, which may be the cheapest, but also the dirtiest fuel. The Government may also consider giving more incentive to encourage and accelerate the reduction of emission. I understand that we may need to pay more as a result, however, that's still better than having an even worse environment.

iii) Opening of electricity market is a long term and complex task. Electricity system is different with telecommunication system. Share of network may incur a lot of reliability problems. We may accept telecommunication system breakdown, but we can't afford a long electricity outage. Besides, with reference to the past failure experience of HK Telecom, I think the two power companies may be more reluctant to open their network to competitor. Even they do, the related negotiation and preparation of network opening would require many years. I doubt the Government is thinking too simple on the opening of the electricity market, as there is nothing mentioned in the consultation paper or announced by the Government what she plans to do for the market reformation. In this point, I agree with the previous comment of CLP Power that the planning of the Government towards the way to open market is not clear.

iv) Price should be reasonable. I don't agree with most of the community parties always asking for price reduction, tax reduction, but salary increase, welfare increase. It is unreasonable and unrealistic. Running business is aimed to make profit. A more reliable network and a better environment deserve a higher price. Everything should have a balance.

Above are my comments to the consultation paper and my wish to future electricity market of our home.

Thanks

Jeffrey Leung

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

And i would like to personally add that the pollution has affected our families decision to stay on in Hong Kong, even though my husbands career prospects would have been fantastic if we stayed, I feel I owe it to my child to breathe clean air.

I also know of three families who have declined offers to move to Hong Kong because of the pollution.

Within the expat community it is all we talk about and Hong Kong has become one of those cities in the world you would not choose to live because of environmental factors.

看完政府發表的「香港電力市場未來的發展第二階段諮詢文件」後，我在未來規管架構的安排上有以下意見：-

- (1) 所提議的以資產為計算之回報率 7-11% 偏低。不能提供誘因提高服務水平及電力可靠性。
- (2) 提議用不同類別的資產有不同的投資回報率是不可行，會增加分類困難及行政費用。現時之計算方法比較好。
- (3) 用雙重處罰之方式作為控制電廠之排放並不公平及合理。
- (4) 協議期不應短過十五年，以免影響基建之投資意慾，影響服務質素及電力可靠性。

作為一個香港市民及電力使用者，我對於目前之規管架構甚感滿意。

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a concerned individual, I am very much concerned about the air pollution in Hong Kong caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Jennifer Carver

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

I have been having Nasal Allergy caused by this bad quality of air for many months which has been affecting my everyday life and seriously damaging my health and using up too much of my money for medical. I have also heard that tourists have been complaining about the air pollution as well, as the representatives of this city, I strongly expect you to take into account everyone's health and life here.

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Best regards,  
Jennifer Poon

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

Hong Kong could be in the leading position of clean energy especially where the yet to flourish China is concerned. Hong Kong can be the hub for clean energy development/research with the ultimate goal of freeing China from the inevitable energy woes. There is an incentive!

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

Mr. Ip Shu-kwan, Stephen  
Secretary for Economic Development and Labour Bureau  
Economic Development and Labour Bureau  
2/F., Central Government Offices  
Main & East Wings  
Lower Albert Road, Central  
Hong Kong

Future Development of The Electricity Market in Hong Kong

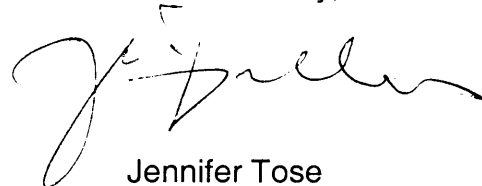

Dear Mr. Ip,

Referring to your stage II consultation paper on the future development of the electricity market in Hong Kong, I would like to convey my views to you on this subject.

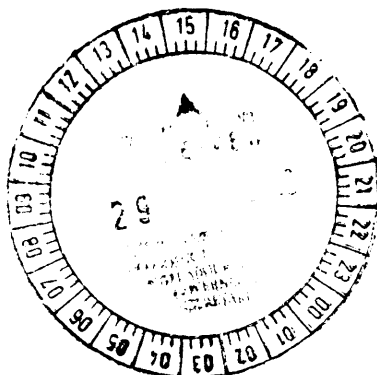

After reading your consultation paper carefully, I have concerns on your proposals. First of all, the proposal on reducing the current rate of return from 13.5% to 7-11% after 2008 is discouraging. The continuous investment incentive from the power company to ensure electricity supply reliability will be interfered. Secondly, the proposed 10-year regulatory period in the post-2008 regime is not sufficient long enough to ensure the power company could cover their investment risks. These proposals will further discourage continuous investment in the electricity supply industry inevitably. Thirdly, we should not rely on power import from the Mainland as it is not a reliable source. Hong Kong should have its own generation to meet our needs.

I hope the Government could value the high electricity supply reliability that we have in Hong Kong now and sustain it in the post-2008 regulatory regime. I would urge the Government to provide sufficient incentive to the investors for continuous investment in the electricity supply industry after 2008.

Yours faithfully,

Jennifer Tose

Subject: Stage II Consultation on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Dear Sir/Madam,

For the Stage II Consultation on Future Development of the Electricity Market in Hong Kong, I've the following opinions:-

1. There is no reason for reducing the rates of return to 7-11%
2. Sufficient rates of return should be given to attract the huge and long-term investment required by the power industry
3. Lower rates of returns may cause insufficient investment which will reduce the power supply reliability and raise inconvenience to residents.

Rgds,

Jennifer W.L. Wong

我認為保障電力公司有合理的回報是適當.但我認為兩電力公司要於未來小心理財,本人常聽到有關過量發電等新聞,我覺得它們應有預算地生產,如果現在真有過量的生產,我認為買往中國等國家也未嘗不可.但我認為所得的利潤要回饋客戶.因此政府可在這方面加以管制.我反覺兩電應該於未來的日子積極發展再生能源,例如風力等.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

## 香港電力市場未來發展第二階段公眾諮詢

本人是一名九龍區市民，就香港電力市場未來發展第二階段公眾諮詢，本人反對以下 2 點

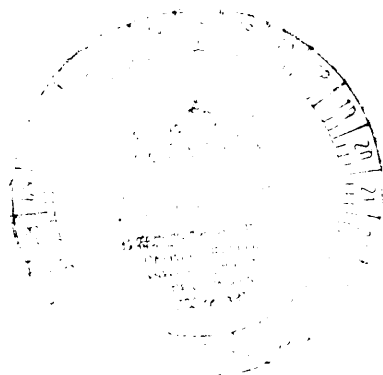

### 1 沒有明確制度下引入新經營者

環顧歐美等先進國家，在電力開放市場後，不單沒有帶來較便宜的電費，反而引起大停電，背後原因可能是因為在一些高用電的地方，例如工/商業區，不同的電力經營者爭相提供電力，但在一些低用電的地方，如住宅地區，就未必獲得穩定而價錢相宜的電力供應。如政府在沒有明確制度下引入新經營者，只會為香港電力市場帶來負面影響。

### 2 管制計劃為期 10 年

電力行業是一個投資非常高的行業，如果管制計劃只為期 10 年，經營者根本沒法制定一系列長遠投資，更難以提供可靠又穩定的電力給予市民，而香港市民及工商界各行各業面在電力管制計劃只為期 10 年的環境下，亦沒有好處。

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

26 March 2006

Economic Development and Labour Bureau  
2/F., Central Government Offices,  
Lower Albert Road, Central

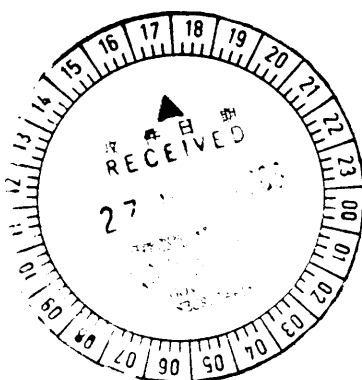

Dear Mr. Secretary,

**Stage 2 Public Consultation**  
**on Hong Kong Future Electricity Market**

Please find below my response to your captioned consultation on the future development of the electricity market in Hong Kong:

I do not think that the offering of different rates of return, which are all lower than the existing 13.5%, can be an effective means to ensure sufficient investment in the electricity supply industry and to enhance air quality in Hong Kong. Given the very capital intensive and long term nature of the industry, a lower rate of return will imply a lower incentive for CLPP and HKE to make the necessary investment. On the environmental front, the lowest rate of return given to the emissions reduction facilities will further discourage their use as the most practical means to deal with the pollution problem. If the Government really cares about the sustainable development of a cleaner Hong Kong, a single rate of return sufficient to attract capital should be offered to investors.

I hope you would consider my views in your consultation.

Yours sincerely,

Jenny Chow

25 March 2006

Economic Development and Labour Bureau  
2/F., Central Government Offices, Main & East Wings  
Lower Albert Road, Central  
Hong Kong

Dear Sir,

Future Development of the Electricity Market Development in Hong Kong  
Stage II Consultation

As a Hong Kong citizen, I wish to express my views on the Government's proposals in the Stage II Consultation Paper.

Government's proposal of a shorter 10-year regulatory period in the Stage II Consultation Paper is unreasonable. This proposal ignores the long-term nature of the power industry. Moreover, there is a high probability for the long-life assets to become stranded after the 10-year regulatory period if there is no chance for the extension of the regulatory period. Then, power companies will definitely have increased investment risk with this proposal.

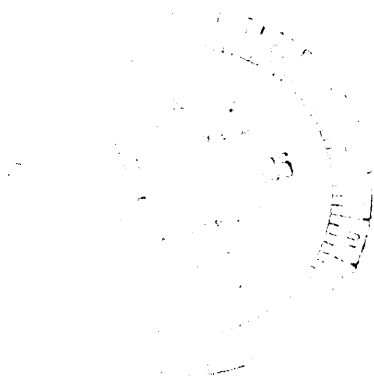

The proposal of Government approval for all tariff adjustments is unfair. After the investments of electricity infrastructure have been approved by the Government, power companies should be allowed to earn their permitted return on investments. With the Government's proposal implemented after 2008, it is likely that the Government's decision may be distorted by political pressure. Power companies will be forced to accept the lower-than-necessary tariff revenues with the compromise of their service quality.

I will be glad to see that my views will be considered and reflected in the Stage II Consultation.

Yours faithfully,

Jenny Chu

Future Development of the Electricity Market in Hong Kong.doc

14 Mar 2006

Economic Development and Labour Bureau  
2/F., Central Government Offices  
Lower Albert Road, Central  
Hong Kong

Dear Sir,

Re: **Future Development of the Electricity Market in Hong Kong, Stage II Consultation**

After reviewing the stage II consultation paper, I do have concerns about some of the proposals with regard to the future regulatory regime and would like to share my view with you as follows:

1. Hong Kong, being a financial centre in the Asian Pacific Region, has been enjoying reliable and safe supply of electricity for many years. Obviously, apart from a business-friendly environment, ample supply of skilled labour, simple taxation system and a transparent judiciary system, reliable and efficient supply of electricity is also a key factor to Hong Kong's success. As a result, it is crucial to ensure that Hong Kong will continue to enjoy the same level of reliability after the expiration of the agreements between the Hong Kong Government and the two power utilities in 2008. I am particularly concerned about the proposal of importing electricity from the Mainland to Hong Kong as China's electricity reliability records have never been impressive. I hope the Government will take a prudent approach to the future development of the electricity market in Hong Kong. In fact, comparing to other household expenses, electricity charge does not seem to be something out of proportion. Personally, I am willing to pay a little bit extra for a more reliable supply of electricity.
2. I don't think the proposed 10-year regulatory period is appropriate as capital investment in the electricity supply market is very high and requires a much longer payback period. Reliability supply of electricity does not come free and a reasonable level of incentive, similar to that offered by the existing Scheme of Control Agreements, must be in place in order to ensure proper maintenance of the electricity supply infrastructure.

In conclusion, I hope the Government will not introduce unnecessary changes to the regulatory framework for the sake of making changes. Maintaining reliable supply of electricity must be the number one priority as large-scale blackout or frequent power interruptions would have devastating impact on Hong Kong's ability to sustain its position as the regional financial and trading centre.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!  
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;

Subject: Comments on Future Development of The Electricity Market in  
Hong Kong Stage II Consultation

☐ Urgent ☐ Return Receipt

Dear Sir/Madam,

Attached please find my comments for your reference.

Regards,

Jessica W.S. Wong Response to Stage II[1].doc

Economic Development & Labour Bureau  
2/F., Central Government Offices  
Main & East Wings  
Lower Albert Road, Central  
Hong Kong.

Dear Sir,

Consultation Paper on Future Development of The Electricity  
Market in Hong Kong Stage II Consultation

As a member of the community, I would like to present my view on the above paper.

With a well-developed infrastructure and reliable power supply, Hong Kong has enjoyed prosperous economic development for many years. Electricity supply is very important to our economic development.

Many academics and advocates of deregulation say open market will benefit consumers – lowering prices while expanding services and giving the public a say in who supplies the power that runs their computers, toasters, lamps, and more. But among the states in the USA that have enacted electricity deregulation plans, results are mixed. Rising prices, electricity investment lag behind demand, and limited supply in some areas have raised questions about the viability of deregulation. It's important to plan our electricity reform carefully. Thus, I support the consultation paper that we have to further explore the opportunities of open market in a longer-term development. However, I doubt that 10 years may not be long enough to lay down all foundation and pre-condition for open market. I also suspect that gas supply contracts, power plant planning and network investment are longer than 10 years. Thus, the time frame of 10 years duration may hinder the long-term capital investment of electricity companies. Under-development/investment of power sector may hinder our economic development resulting in substantial economic loss to the whole society. A reasonable/ more attractive return, not lower than current level plus a reasonable time frame offering to power companies is a must to offer adequate incentives to encourage appropriate investment.

While requiring the two power companies to meet the 2010 emissions reduction targets, the government has neither devised a clear relevant energy nor environmental policy. The energy sector indeed needs to respond to market forces, improved environmental awareness and technological innovations, but it will not be possible to implement changes overnight as there is no substitute for power companies' fixed assets/generation plants. I don't agree with the government proposal to cut emissions through a penalty mechanism. Offering attractive incentive, not penalty, is an appropriate way to investment on environmental improvement. Clean energy, of course, is a long-term option for power generation.

To conclude, a transparent and simple framework for regulatory and monitoring is very important. The government should scrap its proposal to assign different return rates on different assets as it would complicate the return calculation process and increase administrative costs which ultimately pass through to customers.

Yours faithfully,  
Jessica W.S. Wong

27 March 2006

Economic Development and Labour Bureau  
2/F, Central Government Offices  
Main & East Wings  
Lower Albert Road, Central  
Hong Kong

Dear Mr. Secretary,

**Comments on Stage II Consultation**

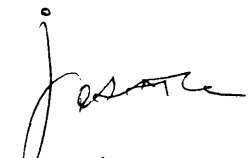

After reading the Paper, I fully agree with the Government's policy objective. In fact, those objectives have already been met satisfactorily under the existing Scheme of Control Agreement.

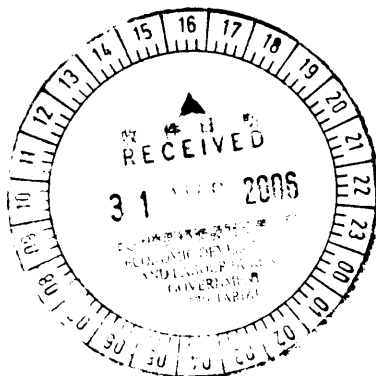

Based on this background, it is inappropriate for the Government to introduce any drastic change in the current regime, e.g. reducing the permitted rate of return to a range of 7-11%, applying different rates of return to different types of assets which the emission reduction facilities shall receive the lowest return and shortening regulatory period to 10 years, etc.

I worry that all the proposed changes, if adopted, will increase investment and operation risks to the power companies significantly. These proposals will also discentivize investors from investing in power infrastructure. I do not want to have a degraded power supply in the long run.

I hope the Government will review the above key issues more thoroughly before formulating its post-2008 regulatory regime.

Yours faithfully,

  
Jessica Wong

Economic Development and Labour Bureau  
2/F., Central Government Offices, Main & East Wings  
Lower Albert Road, Central  
Hong Kong

Dear Mr. Ip,

Stage II Consultation of Future Development  
On the Electricity Market in Hong Kong

As a Hong Kong citizen, I would like to express my opinions on some of the Government's proposals in the Stage II Consultation Paper.

I do not agree with the proposal of Government approval for all tariff adjustment. It is because if the costs and permitted returns for power companies cannot be sufficiently protected, the regulatory regime will become meaningless.

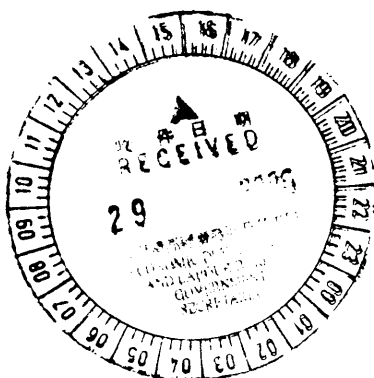

Government has proposed to lower the rate of return to 7-11% and Government should be very careful setting these rates of return. There is no basis provided in the consultation paper to substantiate this proposed range. I also wonder that with the lower rates of return, there will be inadequate incentives to encourage appropriate investment. Also, this proposal is illogical, as higher incentive will be given to renewable energy sources than for emission reduction facilities. Both emissions reduction facilities and renewable energy sources are environmental protection measures. Hence, same level of incentive should be provided to the power companies.

Therefore, I would request the Government to evaluate the proposals more carefully in the Stage II Consultation Paper.

Yours faithfully,

Jessica Yeung

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Jessica Yuen

Subject: Future Development of the Electricity Market in Hong Kong  
☐ Urgent ☐ Return Receipt

Dear Sirs,

My opinion on "Future Development of the Electricity Market in Hong Kong":

- 1) No need to reduce the electricity price
- 2) I find CLP's performance satisfied. Hope to have present state unchanged.
- 3) I understand the return period of investment on electricity system is very long. So, I propose the length of SOC should remain unchanged (i.e. 15 years) but not 10 years as proposed by the government.
- 4) No need to reduce the permitted return rate. Too low return rate will reduce the willingness of investment -> reduce / downgrade the service to customers
- 5) As coal plays an important part on maintaining electricity supply, I find it acceptable to install equipment to reduce pollutants of coal (encourage on investment on this part - however, government's proposal is discourage the investment)

Regards,

Jessica.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Jill Yang

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by pollution.

I am now 57 years old and my wife is 55 years old; we have been residents in HK since 1976 and our 3 children have been raised here.

Casting my mind back to the seventies, we had lovely clear skies, mountains we could see clearly with lush colours - all shades of purple and green at this time of year. Now, every day I have nasal congestion, runny or sore eyes and this is the only factor that will force my wife & I to leave Hong Kong. Two of my three children have already 'voted with their feet' and have left HK. Please TAKE ACTION NOW. We create much of our own pollution, but as any pilot will tell you on his approach to HK, there is normally an enormous mushroom cloud over the Pearl River Delta area, blown over to HK, which contributes the majority of our pollution.

In the 1970's we exposed capital to the PRD, as our own manufacturing industry became uncompetitive; lax pollution controls in China at that time - they needed inward investment to stimulate their own economy - now mean we reap a dividend in the form of pollutants on a daily basis, poisoning us all.

You are representing the people of Hong Kong; please take ACTION and bring us back the blue sky and a breath of clean air. This is your DUTY and governmental RESPONSIBILITY. Please ACT NOW.

Subject: HKSAR Government Stage II Consultation on the Future  
Development of the Electricity Market

☐ Urgent    ☐ Return Receipt

HKSAR Government Stage II Consultation on the Future Development of the Electricity Market.doc

## HKSAR Government Stage II Consultation on the Future Development of the Electricity Market

I write in response to the paper issued by the Government of the HKSAR to consult the community on the future development of the Electricity market in Hong Kong.

The objectives highlighted in the introduction to the paper are laudable and few of us in the SAR would disagree with the need for a reliable supply at a reasonable tariff level, whilst minimizing the environmental consequences of electricity generation & utilisation. However worthy the objectives, there is obviously a serious lack of clear thinking from the authors and sponsors of the paper in how to achieve these worthy aims.

First of all, let us take a look at the issue of reliable electricity supplies. I have lived and worked in the UK and Australia before returning to Hong Kong and, believe me, our reliability here is better than London or Sydney. Hong Kong has one of the most reliable electricity supplies in the world, essential for business and the home. My company could not run without it and living above the 40<sup>th</sup> floor, it would be a very long way home up the stairs at the end of the day if the supply failed. A secure supply is essential to Hong Kong's competitiveness in the longer term – one of a basket of factors like the rule of law, basic freedoms, the security of intellectual property and a stable economic environment, which make it attractive to live and work here. My understanding is that the two power companies here provide reliability to more than a 99.99% level, at no cost to the taxpayer or the public purse. That is a remarkable feat and one that you interfere with at your peril.

It seems to me that reliability doesn't just happen by accident. It is a mixture of sufficient investment, careful planning, expertise and the management of risk – together with long-term commitment. The paper is a muddle-headed combination of proposals, which do not hang together, and which, if implemented, will chip away at the key factors I have outlined above. For investment, unless you are going to raise taxes to pay for it, I presume you will want the shareholders of the power companies to fund it. My understanding is that you have proposed a radically lower rate of return that is likely to be far below acceptable levels for major international energy businesses. With the free movement of capital across the globe and better opportunities overseas, do you really expect shareholders to continue to invest at these levels of return? After interest costs to fund the investment, a depreciation lifetime of perhaps more than 30 years and with all of the regulatory uncertainty that you have brought in with the document, would you invest for a 7% return? What are you going to do if the power companies do not invest any more – wait until the lights go out? By then it will be too late.

Taking the linked issues of long-term commitment and careful planning next, my understanding is that the Government is responsible for approving all major investments submitted by the two power companies. I presume that the existing asset base is therefore justified because you have signed it off. For the long term then, we need to consider how we will fuel power generation in HK. The consultation paper is silent on this issue but it seems to carry a clear division of thinking within government. You say you want reliability but you seem to want to discriminate against coal-fired generation. If it were to become 100% gas, would you underwrite the 30% increase in tariffs which the power companies say would result? Where would the extra gas come from, since HK

does not have indigenous supplies? If the companies are expected to plan for the future and sign long-term supply contracts with the oil companies overseas to ship in LNG (and these are typically over 20 years on a take-or-pay basis from my knowledge), why are you shortening the life of any future contract with the power companies to just 10 years? Surely you cannot expect shareholders to take such a risk – or would you be willing to underwrite it with taxpayers' money? If they can buy – won't it be at much higher prices as the oil companies will have to amortise the gas field development costs over 10 rather than 20 years, so I guess that the people of Hong Kong will end up with a much higher fuel bill for generation than they would if you adopted a more sensible long-term approach.

Looking at the longer term, there seems to be a lot of loose comment about introducing competition in electricity but no roadmap, no approach and no real thought on how this has to be done. If you get this wrong, you will create another California in HK. Over-reliance on China supply (like that out-of-state in California), not allowing new infrastructure development of power generation inside HK (like California) and Government intervention in capping retail but not wholesale prices (i.e. the government regulating tariffs here but not being able to control wholesale prices across the border) will also lead to a Californian-style outcome of the taxpayer having to pick up the tab for lack of regulatory foresight. From the way the paper is written – no clear direction & commitment – I guess you have limited expertise in this area. What happened to the expert you recruited from Canada to help with this? De-regulation may be a worthy objective but as experience overseas shows us – getting the industry and market structures right is critical if you are to avoid disaster.

CEPA is a much-trumpeted device to allow HK companies to enter the Chinese markets on a level playing field – what about extending it to electricity supply? There is a new company, China Hong Kong Power - controlled by mainland organisations, which the Government says it will allow to enter the HK market. Can the two Hong Kong power companies enter the Chinese mainland market to bring relief to my fellow long-suffering factory owners in Dongguan, who have to have generators on standby all the time because power supply reliability & quality is so poor in Guangdong? Will you make this a condition of agreement with the Chinese government before you let this happen? If not – it is hardly a level playing field for Hong Kong business is it? What value to you think these people are really going to add in Hong Kong? If they do come in and cherry pick large customers, presumably the rest of us will have to pay higher tariffs to make up the revenue needed to cover the power companies' operating costs.

I have another concern that the paper does not address. If you make us dependent on mainland suppliers and they have an outage problem – who will come first – their local customers or HK citizens? We all know what it is to be like to be dependent on the mainland for a key commodity – water for example. Take the example of Singapore – it may be cheaper to defy the rules of normal economics and de-salinate than be held to ransom at very high prices by Malaysian suppliers. What if the situation for electricity in Macau were to repeat itself in HK? As I understand it, they cannot generate enough in the SAR there and have to import power from China. They are not allowed to build any more generation capacity in Macau. As forced buyers, what do you think their strength is in the negotiations over the price they have to pay to secure the electricity that Macau customers need? Do you want to put Hong Kong in the same situation?

Having coal, gas and nuclear in the supply mix for the power companies seems sensible and logical – it gives diversity to supply and manages risk. We have all seen the impact of the Russian Gas withdrawal in Western Europe & the Ukraine this winter to be aware of the importance of fuel diversity. Yet the paper seems to set arbitrary emissions targets that will force coal out of use. Press reports say you have imposed targets on the power companies for 2010. The paper does not say what the targets would be for any of the other years beyond this date that would be covered by a new agreement, nor does it say how such targets would be calculated. How do you expect anyone to sign such a one-sided agreement with the government with such a high-handed approach? The paper says that if these emissions targets are not met you can impose a penalty on the companies by not granting them the rates of return that they are entitled to but you do not say what the level of penalty is. If this leads to shutting down plants in HK and letting some of the very poorly performing generators in Guangdong continue, you will only make the air quality here worse.

Having reasonable tariffs is a very sensible objective. Those in HK are pretty low from my overseas experience. Those that are lower tend to be subsidized by taxpayers or at a cost of much lower supply reliability.

My understanding from the press is that one of the biggest factors in this may be the rate of return offered to the power companies for their investments. As a common-sense investor, I equate risk with return. If a bank offers me the prospect of a 20% return rate in, say, offshore equity investments but I may lose all of my money, I may decide to take a more secure investment but settle for a lower rate of return. It's a simple equation self-evident to most Form 7 economics pupils but not, apparently, to the EDLB. Surely, the best way to get the power companies to accept lower returns is to lower their risks? However, you are introducing many new risks in the paper for the 2 power companies, as I understand it. You reduce the term of the contract, you impose "unknown" emissions targets (constructed through an unknown process), you are going to introduce Chinese competitors without equal treatment in return and without a clear roadmap for competition and, if my reading of the paper is correct, even if you reach agreement on a rate of return in a new contract, you can arbitrarily change it after 5 years anyway! That's not what I call an even-handed deal and significantly increases the risks for the power companies. Take a simple tip from a simple investor – lower the risks and the shareholders will accept a lower return. This will help you deliver even lower tariffs for Hong Kong.

I have commented that there are many gaps in the paper. Some suggestions for inclusion. Perhaps you could think about providing government incentives to drive behaviour – e.g. incent the power companies to run energy conservation programmes, as I believe you did several years ago. Perhaps you could also provide a greater incentive than 7% to reward investment in emissions control.

One final thought – what are you going to do about gas? As far as I can see, the industry is totally unregulated and can charge what they like. There is no "scheme of control" nor a cap on returns. You talk about opening up the electricity market to competition but do nothing on gas. When I lived in the UK in the 1970s, we converted to Natural gas and now the pipelines are open for common carriage. Isn't it a bit strange that the gas company here plans to use natural gas as a "feedstock" but not put it directly through the pipes, which would make a lot more sense? The real reason they do not plan to convert, just like their equivalents in Singapore, is that they can stay an unregulated monopoly

forever this way, since no-one else will ever get access to their system. Wake up – you are being duped!

I do hope that you will take these comments on-board and not simply file them for posterity. Given the lack of detail in the paper and the wooly-headed thinking in some of the approaches adopted, you run the risk of driving a very poor bargain for the people of Hong Kong if you continue with your current approach.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

cc:  
Subject: Stage II Consultation - Electricity market  
☐ Urgent ☐ Return Receipt

My name is Jimmy Fong. I would like to provide comments on your Stage II Consultation regarding Electricity Market in Hong Kong.

**A. Policy Objective**

- Agree

**B. New Supply Sources**

(I) Supply from the Mainland

- Agree that supply from Guangdong is not ready
- Must address level playing field by establishing/defining fair market principles. Suppliers operating under different regulatory regime needs to compete in a fair environment

(II) Renewable Energy

- Must take into account affordability of consumers, whether they are willing to pay or not for the additional costs. Facts must be presented clearly (in terms of increased costs) and the public needs to be well educated on this to enable good decision. Don't think the government wants to see protests about higher tariffs as a result of increased use of RE

(III) Arrangements to cater for New Supply Sources

- I am not knowledgeable in these power grid connection issues but I would think the overarching principle must again be to have a level playing field for all players

**C. Proposed Regulatory Arrangements**

(I) Safety

- Agree

(II) Environment

- Agree to continue with current legislation
- I do not agree with your proposed additional measures. You mentioned in para 2.55 (p.20) and specifically in para 2.58(c) (p.22) that environmental investments to have lowest return which I found contradicting to the government's publicly announced policy to reduce environmental emissions. You also mentioned about incentives and penalties about meeting emission targets and that will not work unless emission targets are practical, technically feasible and the additional tariff acceptable by consumers. I can see this becoming a political discussion and the consumers interest will be compromised.

(III) Economic

- (i) Regulatory Instrument - 10 years would not be acceptable for a power company investor. I know you are proposing 10 + 5 but an investor will not view the 5 year extension with certainty which means he will demand a higher risk premium in the return calculation which will work in opposite direction to your

proposed lower return

(ii) Return - Agreed with ANFA based return calculation. However, I think a lower return will not be acceptable by a long term investor such as that in the power industry. This obviously needs to be balanced with risk involved (as I mentioned in the 10 + 5 discussion above) and consumer acceptance. As a consumer my electricity bill is only a small fraction of my total household expense and I rather pay a small premium to make sure I can have a reliable supply of electricity.

(iii) Tariff - I found this very contradictory again. The proposed tariff adjustment mechanism will not work with the proposed Scheme of Control Agreement type of mechanism. If the proposed tariff adjustment mechanism results in a change in tariff which obviously will result in a change in return, this will void the SCA. Hong Kong's reputation of strict adherence to contractual obligations will be at stake here. From an investor's perspective, this will again increase the perceived risk and will demand a higher return.

(IV) Institutional Setup

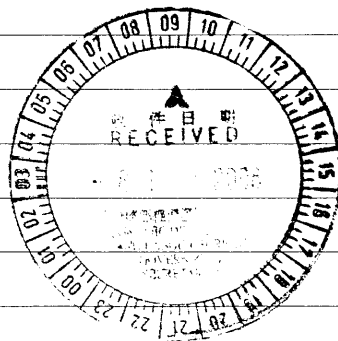

- Agree with recommendation

Thank you for the opportunity for me to express my opinion.

Regards,  
Jimmy Fong

I agree that investment in electricity is a long term investment. The proposed shorter term in Scheme of Control will discourage future investment and eventually put the Hong Kong economy at risk. I support to maintain the status quo.

Subject: Stage II Consultation on Future Development of the Electricity Market

☐ Urgent ☐ Return Receipt

Dear Sir,

With reference to the Stage II consultation, I would like to express my views as below :

1. The Regulatory Period should remain as 15 Years instead of 10 10+5 years since 10+5 years is too short for recovery of huge investment cost with 30-35 year service life.
2. The proposed 7-11% Permitted Rate of Return is far too low and not attractive for the investors. As far as I know, electricity tariff is reasonable and in the lower range when compared with other cities. Moreover, it is more affordable in Hong Kong since Hong Kong families spend on average 1.7% of their household expenditure.
3. The proposed Asset Classification is impractical to be implemented and will only increase administrative cost.
4. The proposed emission penalty is unfair since it is a double penalty.  
The existing tariff adjustment mechanism should be maintained since the requirement of Government approval for annual tariff reviews will be subject to political pressure.

Thanks for your kind attention.

Regards

Jimmy Lai

Subject: Comments on Stage II Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Dear Sirs,

Stage II Consultation Paper on Future Development of the Electricity Market in Hong Kong

I would like to voice out my comments below on several aspects of the consultation paper for your consideration.

1. The policy objective of ensuring that the public can enjoy reliable, safe and efficient energy supplies at reasonable prices, and to minimise the environmental impact caused by the production and use of energy is generally acceptable. That is to say, reliability, safety, efficiency, price and environmental impact shall be considered in a balanced manner. However, the recent public discussions on the paper have put too much focus on bringing down the electricity bills. We should learn from the blackout incidents around the world in recent years which had led to huge economic losses. Afterall, the electricity bill under the present scheme of control agreement accounts for less than 2% of the general household monthly expenditure which is far lower than housing and transport.

2. To incentivise investment of the existing two power companies and any new players in the electricity market, the duration of regulatory period shall be not less than 15 years and the permitted return shall be not less than that of other major public utilities, such as gas company, bus companies, etc. Otherwise, power companies will not make long term investment to maintain the desirable level of supply reliability. It should be noted that power system infrastructures such as generating facilities require long term planning and have long service life.

3. In order that the electricity prices are reasonable, the Government should tighten its monitoring and control on the capital expenditures as well as the operating efficiencies of the power companies.

4. Electricity generation is one of the major sources of air pollution in Hong Kong. To reduce emissions in electricity generation, the government should take a multi-prong approach:

i. To educate/encourage the public to reduce use of energy, e.g. running campaigns against setting an unnecessary low office temperatures, promote the use of energy-saving electric appliances, e.g. water chilling air-conditioners, development of energy-saving buildings. The government in particular should take the lead in conservation of energy.

ii. To encourage the power companies to adopt a tariff structure that deters bulk use of electricity (c.f. the water charges). The over-charges from bulk electricity users can be used to fund emission reduction facilities or renewable energy projects.

iii. To strongly subsidize RE projects which generate more costly electricity under the present technology.

iv. To levy penalty to power companies for excess emission on the one hand while incentivise them to install emission reduction facilities on the other. This carrot and stick approach must be of significance in order to be effective. In this regard, the power companies shall be allowed a higher permitted return rather than a lower one for installing emission reduction facilities. The cost of these facilities are borne by the users as they are indirectly the polluters. The government shall promote an overall social commitment of the community on environmental protection.

Regards,

Jimmy Leung

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;

2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;

3. The investment in renewable energy should earn a higher level of permitted rate of return;

4. The targets and time-table of reduction in coal burning should be set;

5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;

6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Jimmy Mah

Subject: Comment on the 2nd Consultation Paper on Future Development of Electricity Market

☐ Urgent

☐ Return Receipt

Dear Sir,

I would like to give my opinion on the 2<sup>nd</sup> consultation paper on the future development of electricity market.

1. I reckon that lowering the bilateral agreement period from 15 years to 10 years is not appropriate. The risk involved in investing power supply industry is very substantial and there must be a reasonable agreement period so that it would be fair to the investors. The following characteristics in power supply industry will support my view:

 Power generating and transmission equipment have very long asset life (usually >30 years).

 The investment is very capital intensive (more than HK\$1 billion for each unit)

 The investments in power supply industry are sunk investment. Unlike other sectors, e.g. transportation, of which the assets are mobile and in the worst case, they can be sold and moved to other place. But the power generating and transmission assets are extremely difficult to relocate.

 To achieve reasonably low cost, those contracts, e.g. fuel contract for a power plant is needed to be very long term, e.g. >25 years.

So if the agreement period is lowered to 10 years and at that time, with the possibility of introducing new supply, this means that there will be more than 20 years of uncertainty on the investment. Under such circumstance, who will be willing to further invest in the power supply industry? Please be remembered that the electricity crisis in California is a result of lack of investment in power generating and transmission facilities. Definitely no one in HK would like to see that same thing happens in here. Therefore, keeping the existing agreement period at 15 years would be at the biggest benefit to HK.

2. It seems that a ROR of 7-11% does not match with the obligation and risk imposed on the power companies. The ROR of 7% is even lower than the best lending rate! It is a legal requirement for the power companies to have obligation to supply electricity to anyone who applied for. It is also a legal requirement for them to have mandatory pollution reduction equipment when a new unit is to be built. But on the other hand, the return for the investors is reducing to a level which could be much lower than that of the return from investing in local stock. Hong Kong people have been enjoying an interrupted and quality supply of electricity for many decades. Price for quality is already a widely accepted thing. Therefore it sounds unfair to the investors who need to face an unreasonable diminishing return but at the same time to invest more and more.

3. The 4-tiers return rate system for different assets seems strange and irrational. In providing a reliable, quality and environmental friendly electricity, all parts including generation, transmission and pollution reduction equipment are indispensable and are of same level of importance. So why should there be a difference on the return rate for different assets?

In addition, the government on one hand promotes the use of cleaner energy, but on the other hand put the return on adopting pollution control facilities on the lowest side, it seems that there is a contradiction. Moreover, as indicated in the 2<sup>nd</sup> Consultation Paper that renewable energy could not be the major form of energy source, therefore adopting pollution control facilities will still be the major way to improve the air quality. A negative discrimination on the return on investment in pollution control facilities will probably reduce the incentive for the power companies to make further improvement on emission standard. As a citizen and for the sake of my health, pay to return on better air quality is reasonable.

4. The link of ROR to the emission cap also seems unreasonable. As the emissions from the power plants are already controlled by the APCO, the link of ROR to emission cap means double penalty which is unfair to the investors. Moreover, as the existing emission cap is nearly set unilaterally by EPD and the change in future emission cap is also unknown, so this would create serious difficulty in planning and introduce significant investment uncertainty for the power companies in the next 10-15 years.

It is in my opinion that the existing SOC and its terms and conditions have been working well for many years and therefore it should be retained as it was. This would surely help to maintain a reliable supply of electricity which is of crucial importance for further strengthening the position of HK as a major financial and logistic center. As a general citizen, it will not be my concern to have a dollar reduction on the tariff, but maintaining a reliable electricity supply which in turn secures the economy of HK is far much more important.

Yours faithfully,

Jimmy P.W. Woo

Subject: 香港電力市場未來的發展 – 第二階段公眾諮詢

☐ Urgent ☐ Return Receipt

香港特別行政區政府  
經濟發展及勞工局

政府於「香港電力市場未來的發展」第二階段諮詢文件中建議調低兩電回報率，由13.5%減至7-11%。以一個消費者的角度來看，當然逢減價必歡喜。但只要將香港電價和世界各地電價比較，便會發覺香港的電價是處於一個低水平。在香港，電費約佔家庭的總支出百分之一點七。而在新加坡及澳門兩地，電費佔家庭總支出分別為百分之二點二二及百分之三點柒四。香港市民在電費方面的支出，也較交通費為低。另一方面，兩電供電的穩定及可靠程度一直表現卓越。

考慮以上各點，我覺得政府應該為電力公司提供足夠的准許回報以吸引投資，確保市民能夠以合理的價格，享用可靠、安全及有效率的電力供應。

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Consultation Paper for Electricity Market (Stage II)  
☐ Urgent ☐ Return Receipt

As a Hong Kong citizen, I am of the view that both power companies have done their best to uphold very high supply reliability, which is very important to HK economy, though not everyone can notice this.

I think the current electricity tariff is at reasonable level, but worry about the government's proposal to lower the permitted return. I do not think by this way, the public can enjoy a reduction in electricity tariff. On the contrary, given the capital intensive nature of power industry, lowering the permitted return will increase the higher risk of investment for the power companies, so they may need to increase the rate of return by increasing tariff. This is absolutely not what HK people would like to see. Therefore, I recommend the present framework of Scheme of Control be maintained in the future.

Subject: We want clean air!  
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Nat

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, JJ Cornelius, MD, am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen for the last 24 years, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air. I remember the Hong Kong of 24 years ago. We have moved on a lot since then in many ways, but pollution is driving people away as well as affecting the lives of those of us who are committed to Hong Kong.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

joan lupton

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Economic Development and Labour Bureau  
2/F., Central Government Offices  
Main & East Wings  
Lower Albert Road, Central  
Hong Kong

Dear Sir,

Future Development of the Electricity Market in Hong Kong  
Stage II Consultation

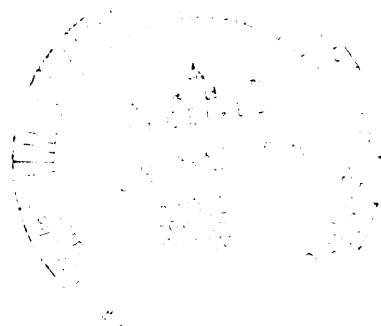

I would like to express my opinions on the Stage II Consultation proposals.

With the reduced permitted return and shortened regulatory period proposals, the power companies may reduce their huge and long-term capital. This will lead to deterioration of electricity supply reliability.

Most of the Hong Kong People live and work in high-rise buildings, high electricity supply reliability is essential in our daily life. I hope the government will revise their proposals and give enough financial incentives to the power companies to maintain the existing level of power supply reliability.

Yours faithfully,

Joann Lor

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

My family has lived here now for five generations, I would hate to have to leave HK but more and more frequently I worry about the future of my children's health. It is not enough to blame China for the pollution, the HK Gov. MUST make guidelines and the following changes to preserve the future of our home.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Future Development of the Electricity Market in Hong Kong - Stage II Public Consultation

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

At present the Government is now progressing in the Stage II Public Consultation, I would like to share some of my views in this subject.

In order to maintain Hong Kong as a World Financial Centre, I agree and support the policy objective to ensure that the public can continue to enjoy reliable, safe and efficient supplies at reasonable prices, and to minimize the environmental impact caused by the production and use of energy. I strongly believe the two power companies at present can fulfil all these. Although they increase the tariff a few times, in my view it is acceptable, because their cost in generating electricity is high, such as coal.

The arrangements on "Safety Regulation", "Environmental Regulation", "Economic Regulation" have been proved to be cost effective in the SCA Regime.

However, I do have reservation on the following proposals:-

#### RATE OF RETURN 7% to 11%

I do not think this proposed ROR will give sufficient incentive to power companies to invest. I do not want to see power shortage and the instability of power supply. At present, the two power companies can give us confident on electricity supply. As the current tariff is affordable to us, it is not wise to further lower the tariff by reducing the ROR and then jeopardizing the supply reliability.

#### 10-YEAR REGULATORY PERIOD

I feel that a shorter regulatory period of 10 years cannot encourage the power companies to invest, this investment is very capital intensive and take a long time for cost recovery. If it is too short, this may degrade the supply reliability.

#### NEW SUPPLY SOURCES FROM THE MAINLAND

Hong Kong is such a World Financial Centre, we rely so much on electricity in all aspects of life. We have so many high rise buildings, all kinds of commercial activities, an international airport, our livings all depend on electricity, I do not think we can afford to take a risk to have a

black-out like in Canada, USA and Europe, only one black-out would mean a loss of billions dollars. Even in China, the power supply is not stable, how can they afford to supply electricity to us. We are just placing us in high risk.

In order to maintain Hong Kong as a world-class electricity infrastructure, I hope the final regulatory framework can provide a stable and encouraging environment for power companies to invest. In return, the Hong Kong citizen can receive high reliability and good quality of services.

Yours sincerely,  
JOANNA TANG WAI YEE

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

25/03/2006 18:45

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: 我要清新空氣

☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

25/03/2006 00:23

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Comment on the opening up of electricity market to newcomers

☐ Urgent ☐ Return Receipt

Hi,

Just my two cents, but I want to express my concern on the opening up of electricity market to newcomers, especially to those come from the mainland China. As everybody probably have heard of, the electricity supply in mainland China is very unstable, and without any guarantee in both quality and quantity. On the other hand, due to other commercial factors, the future electricity price in Hong Kong may not be reduced as low as everybody expects. In view of the little gain but high risk situation, I see no reason to allow the opening up of electricity market to such newcomers.

Joe Chan.

Subject: Comments on Stage II Consultation Paper on Future Development of the Electricity Market In Hong Kong

☐ Urgent ☐ Return Receipt

Dear Sir,

**Re: Stage II Consultation Paper on Future Development of the Electricity Market In Hong Kong**

After reading the consultation paper, I am writing to support your policy objectives, especially the paramount importance of the reliability and safety of the electricity supply.

I would also like to comment as follows:

1. Hong Kong, act as a world-class financial center and a fully developed city, we can't afford any a-few-hours of stoppage of electricity supply. We are all well-known the consequences of loss of electricity supply. So when we are considering the future development of the electricity market, the most important consideration should be the supply reliability and safety. There have been cases of cascaded trips in US and Europe not long ago that showed the drawback of interconnection.
2. Most people believe that if the market was opened to 3rd parties or imported from the Mainland China, the tariff would be lower than present. I can't see the opening of electricity market is going to reduce the tariff. For example, we have a lot of petrol companies but our petrol price is still one of the highest in the world! Once the market is opened, due to the uncertainty of investment return, investors surely would lower their incentive to do a long term investment in electricity infrastructure. This may lead to under-investment in electricity infrastructure in Hong Kong and finally causes the tariff rise exponentially.
3. From an environmental perspective, low tariff definitely encourage usage, same outcome in the open market of IDD market. More pollutant generated and finally we all would suffer from severe air pollution.
4. I agree that introduction of renewable energy sources in Hong Kong should be actively explored. However, practical issues such as cost-effectiveness, technical feasibility, safety and supply reliability issues must be carefully assessed.
5. The present proven scheme of control on electricity market operation is considered appropriate and most beneficial to Hong Kong. We should keep our regulation as simple and non-intrusive as possible. I always find that the discussions related to the rate of investment return in LegCo are too political and sometimes to the extent, are irrational. I do not want the basic necessities of our life, like electricity, become a tool for some politicians. I believe that continuation of the present scheme would secure the economic development of Hong Kong.

Yours Faithfully,

Joe Lee

Subject: Comment on the Stage 2 Consultation paper on Future  
Development of Electricity Market in HK

☐ Urgent ☐ Return Receipt

**My comments on the Stage 2 Consultation paper on Future Development of Electricity Market in HK are :**

Hong Kong is a world known International city. A Reliable electricity supply to every consumer, business company, factory, office is the reason of HK got sucessful in the pass Century . We do not allow having occasional interruption of electricity supply such as in mainland China and some Asia Countries . Due to these reasons, I do not agree to change the existing agreement between the Government and the Power companies.

-

The Power Company investments are capital intensive, cannot be moved out in the land, with asset span more than 30 years. Huge fuel commitments involving billions of dollars of liabilities extend over 20 years or more. A 15-year regulatory framework is a minimum period to reduce uncertainties to facilitate long-term investments and fuel supply commitments. Otherwise, the fuel cost fluctuate will led to a frequent rise of electricity cost which will make annoyance to HK citizen and unstable Society and investment. HK Government should have responsible on it and not push the responsibility to the Power Company !

In Environment aspect, It is environmental disincentives and the Gov't do not have a clear plans to migrate to a competitive market. Also, it does not has adequate incentives to encourage appropriate investment, and the risk profile will be increased substantially. I think the overall Environment protection responsibility is belongs to HK Gov't. Don't slip this responsibilty to two Power Company so as to please the Politicians and Councilors.

-

For new participant in the elecricity market is welcome. But the Gov't should provided a clear plan and game rules for all parties for reference and comply. But not just invite the new comers with a privilege scheme which is difference from the existing two power company. It makes unfair in a open competition Society.

Performance based penalty shall not be implemented until the detailed and clear energy /environmental policy has been finalized. Complexity of moving to a competitive market cannot be under-estimated. Don' t perform the changes so as to please the Politicians and put the Reliability of electricity supply on the gamble desk. The result might be lose-lose-lose for HK Citizen, Two Power Company and HK Government.

Subject: Stage II Consultation - Future Electricity Market

☐ Urgent ☐ Return Receipt

Dear Mr. Ip,

Attached please find comments on the above subject. Thanks for your attention.

Joe Man

JoeMan.doc

27 March 2006

Economic Development and Labour Bureau  
2/F., Central Government Offices, Main & East Wings  
Lower Albert Road, Central  
Hong Kong

Dear Sir,

Future Development of the Electricity Market Development in Hong Kong  
Stage II Consultation

The current standard of electrical quality and reliability is remarkable. Confidence in the reliability of our electrical supply is not only a pivotal underpinning to the functioning of businesses, but to everyday Hong Kong life. Without electrical reliability, the very fabric that holds together our society will tear.

Two of the proposals that were laid out in the consultation paper have caught my attention. The first is a proposal to reduce the regulatory period, from 15 to 10 years. The second is a proposal to limit the maximum rate of return. These two proposals combined would greatly lower the financial viability of power companies, thus deterring investors. Without adequate funding, electrical infrastructure developments will have to be cut short and the reliability of the electrical supply would suffer. This would be unacceptable to every citizen and resident in Hong Kong whose financial and personal lives depend on a constant stream of reliable power for their everyday functions.

In order to maintain our current standards of electrical reliability, the Government should carefully evaluate the proposals listed in the consultation paper, especially the two proposals mentioned above. I hope that Hong Kong will continue to enjoy high-quality and reliable power for years to come.

Yours faithfully,

Joe Man

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Dear Sir,

With so many high rise buildings, reliability electricity is of utmost importance to HK. Please don't do anything to put reliability at risk such as discouraging investment by the utilities as the whole HK may suffer more from the negligible decrease in tariff.

Regards,

Joe

Subject: Electricity Market - Stage 2 Consultation  
☐ Urgent ☐ Return Receipt

Dear Mr. IP,

Attached please find my comments on the captioned subject.

Joe Manski

Joemanski.doc

March 27, 2006

Economic Development and Labour Bureau  
2/F., Central Government Offices  
Main & East Wings  
Lower Albert Road, Central  
Hong Kong

Dear Mr. Ip,

**Future Development of the Electricity Market in Hong Kong**  
**Stage II Consultation**

With reference to your Stage II Consultation Paper, I would like to make some comments on rate of return as proposed in the consultation paper.

Scheme of Control Agreement (SCA) between the two power companies and the Government governs the development electricity industry in Hong Kong for the last 40 years. Thanks to this SCA, people in Hong Kong are enjoying a high quality of electricity service with supply reliability exceeds 99.99 percent. The SCA also ensures that the electric tariff is priced reasonably and the electricity tariff, in general, is acceptable comparing with other international cities. Reasonable tariff and high quality of electricity supply will continue lighting up the prosperity of Hong Kong.

Electricity industry is very capital intensive with equipment life usually 30 years or more and fuel contract could also last for 20 years. I think a high rate of return to investment is required to compensate the high investment risk in the electricity industry. In my opinion, you should provide evident that your proposed lower rate of return is adequate and capable to attract investment in the industry. Otherwise, electricity supply in Hong

Kong could suffer from insufficient investment and risk of power service interruption would be very high.

In this consultation paper, there is proposal that facilities utilized for different purposes would receive different rates of return. This idea does not seem to be very sensible. In my view, a power company's capability to raise fund for infrastructure investment would be the same, no matter the fund is for generation or environmental protection. So, as long as the cost of borrowing is the same, the rate of the return should be the same. In addition, the paper is also required to clarify, justify and quantify its proposed rates of return.

Insufficient investment in the electricity industry caused by the proposed changes in the consultation paper may lead to sub-standard supply reliability. Eventually, there may be high costs that the society has to pay due to often power interruption that will damage Hong Kong's image as a world-renowned city.

Both power companies serve Hong Kong over 100 years and they will continue supporting the prosperity of Hong Kong in the future. The electricity industry in Hong Kong is not broken, it is unwise to change rules and gamble on Hong Kong's future prosperity and the stability of the society.

Therefore, I support renewal of the current Scheme of Control Agreement for another 15 years **without any change**.

Yours truly,

Joemanski

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

28/03/2006 19:37

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

☐ Urgent ☐ Return Receipt

31/03/2006 18:50

To Economic Development and Labour Bureau,

I highly recommend you to make laws about how much particles are allowed in the air in Public Buildings, like schools, hospitals etc. If you do not solve the environmental problem you have to install air filters into those buildings so at least people are safe when they are inside. Check [www.camfilfarr.com](http://www.camfilfarr.com) for air filtration solutions.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

31/03/2006 00:39

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

John Bowden

I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

John Bower

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Comments on the Second Stage Consultation on Further  
Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Please find attached my comments regarding the second stage consultation

Best Regards

John Chan

Let there be light.doc

There has been a lot of discussions recently regarding the new Scheme of Control, and a lot of Hong Kong Citizens and stakeholder groups have voiced their opinions regarding the future regulatory regime. The power companies have also shown their strong positions against the proposed new scheme. No doubt 2008 marks a good opportunity for us to come up with a refined scheme that can be beneficial to Hong Kong as a whole in the long run, and it is with this in mind that I would like to voice out my humble opinion, to contribute to the making of the new regime that can potentially impact the social lives and economy of Hong Kong.

First of all, I would like to start my reasoning with the basics. Despite conflicting views from various parties, there is one statement that all can agree upon, and that is the government's policy objective, which is to ensure that the public can enjoy reliable, safe and efficient energy supplies at reasonable prices, and to minimize environmental impact caused by the production and use of energy. If this is what we all are aiming to achieve, then my arguments can further be pursue thus:

**Reliable, safe, and efficient energy supplies** – From the first stage consultation responses, it can be perceived that reliability is the public's most concerned factor, and this is not without a reason – can you imagine how much damage it could bring to the Central Business District if there is a half an hour regional black out? Safety issues due to elevators stuck in the skyscrapers, fresh food turned bad in the restaurants, potential impact to the financial institutions and stock market, as well as the hospitals, etc. – all of which the losses cannot be compensated for by a few % tariff cut.

**Reasonable Price** - recently people seemed to have changed the objective of the regulatory review to “reduce the tariff by 15~20% in 2009”. We should not confuse between objectives and results. “Lowering of tariffs” should never be set as an objective, as tariff is a product of the regulatory regime, which in turn is designed to meet the policy objective that aims to sustain the long term well being of the society. We must therefore take care not to trade short-term benefits like tariff cuts with long term benefits – what is the use of cutting the tariff next year and then in a few years' time having the tariff shooting up drastically (oversea's experience)? What we need is a regime that can make the “reasonable price” sustainable!

Is the tariff in Hong Kong reasonable? From a customer's viewpoint, I guess what people are most upset with is that the tariff on the Hong Kong island is 30% higher than their Kowloon counterpart, but with no apparent difference in the service quality

and supply reliability. Furthermore, people perceive that with an asset-based return regime, the power companies will pump up their assets in order to gain a higher return. If that's the case, I would propose to have a mechanism that can promote higher tariff transparency, and one of the pre-requisites is to make the tariff setting mechanism simple and easy to understand, so that stakeholders could easily trace and pinpoint the factors that are contributing to the perceived high tariff and exert pressure for improvement accordingly. As such, the Government's proposal to sub-divide the power companies' asset into different categories with varying permitted rate of return is in fact rendering the tariff setting mechanism more complex, and the power companies will need to put in more overhead to administer such artificial categorization, which is unproductive from an economist's viewpoint, and the cost at the end will have to be passed back to the customers.

There is also the perception that introduction of competition can reduce tariff because the incumbent players will have to slash prices to fight for market share. In general, this is correct, but in the electricity industry sector, if the slashing of prices eventually affects reliability, then it will become a lesson that is too dear to pay, and too late to repent. I support the gradual introduction of competition, but with the objective to boost the incumbent players' productivity, and not to undermine their asset investment for high supply reliability. Yet the Government needs to contemplate how many players can Hong Kong's 7 million population market support, and also make clear the rules regarding new market entrants – and obviously the Government has not yet defined a clear regulatory regime for open competition: what will the government do if there is a new player entering the market in a few years' time? What are the rules (both technical & commercial) regarding interconnection, the possibility of opening the transmission & distribution network, and the issues of accountability whenever there is a fault? Will the new players be allowed to cherry pick the "good" customers? Will the competition result in small customers subsidizing the big customers? Will the system stability be affected? All these are very complex and fundamental issues, and from overseas experience, deregulation has to be carried out in phases and usually takes a decade to implement. The government must therefore scrutinize all factors meticulously before progressing with market deregulation.

**Minimize environmental impact** – with the increasing air pollution, environmental protection has become one of Hong Kong people's key concerns. The power companies should thus put in every effort to reduce emissions as much as practicable, and the new regulatory regime should provide incentives for the power companies to do so. It is strange that the Government proposes a permitted rate of return at the

high end of the spectrum for Renewable Energy (RE) infrastructures but a rate for the emission reduction facilities at the low end of the spectrum. After all, coal is still the main efficient source of energy of the power companies, so to protect the environment, which do you think is more effective in the short to medium term, retrofitting emission reduction facilities, or building the less energy-efficient RE infrastructures which take years? Of course there is also the option to encourage the power companies to replace their coal-fired plants with plants using cleaner fuel sources like natural gas, but this brings us to the fundamental question: do we want coal excluded from Hong Kong's fuel mix? Coal is a fuel source, despite its relatively higher emission characteristics, has a relatively stable world-wide supply and can be obtained with a relatively competitive price. Eliminating coal from Hong Kong's fuel mix will not only put pressure on the tariff due to higher fuel expenses, but also jeopardize Hong Kong's fuel supply security since all fuel sources are imported, and this in turn could impact supply reliability. The government should thus establish an energy policy which allows coal as a pivoting energy source, and encourage the power companies to proactively diversify their fuel mix to include other cleaner energy sources. As coal is indispensable in the short to medium term, efficient emission reduction facilities will also be vital to keep emissions to a minimum level. The government should thus provide extra incentive for the construction of emission reduction facilities. One more aspect I would like to bring out regarding air pollution. It's very natural and easy to make the power plants scapegoats for air pollution. Who is better to blame locally other than the power plants? Nevertheless, from objective data from the Hong Kong Observatory, satellite photos, etc., most of the air pollution comes from mainland China, and if we want to breathe cleaner air, we need to identify the culprits and address the issues in partnership with mainland China's government. Pointing fingers at the nearest target cannot solve the problem.

Reading through the proposals in the second stage consultation paper, the government suggested to:

- Reduce the permitted rate of return of the power companies;
- Reduce the review time from 15 years to 10 years

Note that all these increase the business risk of the power companies, which are highly capital intensive by nature. By reducing the permitted return, surely it could lower the tariff in the short term, but if the return is not attractive to investors, it will destroy the power companies' financial robustness, which could lead to reduced

investment into the power network, and this will in turn impact supply reliability. Shortening the review cycle to 10 years will render power companies difficult to negotiate good terms for fuel supply contracts, as the power companies cannot bear the risk of taking on long supply contracts in view of the regulatory uncertainty due to the shrunk review period. Unfavorable fuel contracts leads to higher tariff. Furthermore, there was no clear indication in the consultation paper as to how the government came up with the % figures of the permitted rate of return, but only briefly mentioned that it is derived from the adoption of an integrated approach which takes into account the cost of raising capital and risks. However, ***is this based on the risk and cost of raising capital for the status quo?*** If the government's proposals are implemented, the business risk factor and the cost of raising capital will no doubt significantly increase (not to mention the introduction of new players), and this in turn will also impact the determination of the level of the permitted rate of return. It is now therefore premature to judge whether 7% is too high or too low a return rate as we do not have the details on how such % is derived from. The current debates on the rate level as I perceive it are mere political stances or stages in the strategic negotiation process. The government should thus further disclose the details in how the proposed permitted rate of return comes up (and how to determine the risk premium factor) so that all stakeholders can objectively make a rational judgment on its appropriateness.

After all, changes should not be introduced just for the sake of change, nor be influenced by political sentiments at the expense of long term benefits. Wouldn't we be too naïve to believe that we can lower the tariff, eliminate pollution, increase the supply reliability and service quality all in one go and keep such state sustainable? Economics 101 tells us that it won't, as there is no free lunch, and the role of the government is to balance these factors such that the new regulatory regime could facilitate the gradual evolution of the current power infrastructure to a more robust power infrastructure that can deliver reliable electrical energy with minimum pollution at a reasonable price that is sustainable.

We are at a time in which our decisions could profoundly impact our future, and wrong decisions could lead to events that are irreversible. For years we have taken for granted that light will come on whenever the switch is turned on, and we hope to remain so in the years to come. I urge the government to play its cards with a long term view, and structure the new regulatory regime for the long term benefits of Hong Kong.

2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

It is sad that many people in Hong Kong have now accepted that smoggy skies is the norm and clear blue skies is the exception.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!  
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

John Green

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Future Development of the Electricity Market in Hong Kong Stage II Consultation

☐ Urgent ☐ Return Receipt

To: [electricitycommentstage2@edlb.gov.hk](mailto:electricitycommentstage2@edlb.gov.hk)

Subject: Future Development of the Electricity Market in Hong Kong Stage II Consultation

Dear Sir/Madam,

This is writing to express my personal opinions on the captioned subject.

1. Living in a modern city like Hong Kong, reliable electricity supply is essential to sustain the quality of every citizen's life and the future economic development. I do believe most HK citizens feel comfortable with the reliable power supply services provided by the existing two power companies. Bringing in new power company or supply from the mainland should not be the right choice at this moment. Poor electricity reliability and shortage of electricity supply are well known problems in Mainland China. We cannot rely on such an unstable sources of electricity supply. On the other hand, it is also a great challenge to monitor and control the condition of mainland's power stations, especially on the air pollution aspect. There are many cases in overseas market that opening of electricity market backfired and caused the unexpected increase in tariff and decline in reliability.

2. Comparing with other international cities, electricity cost in Hong Kong is in a reasonable level. I would appreciate it very much if Hong Kong government can work out a mechanism to stabilize the tariff. Given that the average expenditure on electricity in Hong Kong represents less than 2% of total household expenditure, it is not necessary for Hong Kong government to impose too many constraints in diminishing the rate of return of the power companies. Otherwise, it will hit the investment intention of the power companies.

3. Shorten the regulatory period to 10 years will cause the power companies to reduce or even ignore the long term planning and investment in the electricity supply infrastructure. No investor will be willing to commit huge funding in power asset if the regulatory period is reduced to 10 years. As a result, the quality of electricity supply will be sacrificed. Therefore, the current practice of 15 years of regulatory period should be the more reasonable and practical arrangement.

Regards,

John Leung

3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

I cannot consider raising my children here under the present conditions of pollution.

Email : [electricitycommentstage2@edlb.gov.hk](mailto:electricitycommentstage2@edlb.gov.hk)

本人對諮詢文件提出如下意見：

#### 准許回報

1. 回報水平應與投資和所需要承擔的風險對稱。政府不應隨意加入不明朗的因素，如不清晰的環保要求，令有關回報率問題複雜化。
2. 香港電力公司提供的是「一條龍」服務，發電、減排、輸出至供電每一環節同樣重要。

#### 電價水平

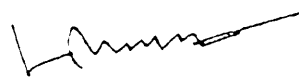

1. CLPP 現時電價比世界其他大城市相比較低，定價算合理。我們不應將貨就價，電價減了，可靠度及服務則會下降。電力改革不應只着眼於降低價格，而應着重電力市場的長遠可持續發展及市民福祉。

#### 協議年期修改

1. 電力行業投資大而回本期長，資產壽命一般長達 30 年或以上，而國際燃料供應商通常要求簽訂 20 年或以上的採購合約，因此建議給予 15 年合約年期，令電費得以保持穩定。
2. 長期燃料合約可穩定燃料價格，不適當「協議年期」對供電市場發展必產生不良影響。

#### 開放市場方向

1. 內地電力供應仍然不足，大城市如深圳、廣州等地時要拉開限電，內地有沒有足夠的、可靠而穩定的電力供應香港？內地的電價雖較低，但因開放內地電力輸港，所壓下來的電費，是否足以抵償萬一電力供應不足及不穩定所帶來的經濟損失？為着香港工商業、金融業的持續發展，政府要清楚新的電力公司的供電條件以達合理的競爭。

  
30/3/06

2. 政府需制訂詳細計劃在相同競爭條件下，為開放市場創造條件，而不應在條件未成熟時輕率地開放市場。

### 環保方面

1. 作為香港一份子我們很關心空氣質素，本人不介意分擔減少排放所涉及的開支，因為這是市民應負的責任。

### 能源政策燃料

1. 長遠地政府必須制訂一套清晰的能源政策配合以恰當的環保條例。多元化燃料組合發電及燃料供應穩定對供電可靠性及維持合理電費是主要因素。
2. 我們應重視天然氣發電燃料從而減少用煤數量以改善空氣質素。政府就土地使用，工程施工等積極提供協助。

### 再生能源

1. 香港需研究風能的可行性，因風能的可靠度會受不可預計的天氣條件所影響，比如在那些無風的日子，便須靠傳統的發電設施提供電力。
2. 但香港人多地小，要發展可再生能源不易，我們擔心會因此令到電價大幅上升。若要認真發展可再生能源，政府必須提供土地及作出相關協助。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong resident, I am very much concerned about the air pollution, particularly that caused by the power stations. I strongly demand the government to take some initiative to resolve the increasing problem of pollution, and to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those which cannot achieve the caps should have the rate of return reduced;
2. Investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gases;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air. Or if you intend to continue with existing policies, then can I request that you issue us all with free supplies of oxygen and pollution-filtering gas masks, as this is the only way we can continue to live and breath without endangering our own lives and those of our families.

Regards,  
John Macpherson

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

### **Scheme of Control Stage II Consultation Submission**

I am writing about my concerns on the proposed charges to the Scheme of Control as outlined in the Stage II Consultation.

Having moved from the United States to Hong Kong some years ago, there's no doubt that one of the best features of this city is the power supply, which is very reliable.

As many people from the US will be able to report, a reliable power supply is something that can't be taken for granted. Deregulation in the US and more connection between different grids seems to have made supply less reliable.

My concern is that this could now happen in Hong Kong. I think that the idea of opening up Hong Kong to competition from power companies in the Mainland is especially dangerous. In the US, large areas of the country have suffered black outs at times as problems in one grid cascaded into other parts of it. Once Hong Kong is connected to the Mainland grid, it could easily suffer from problems there, where the infrastructure doesn't seem to be of the same standard. In other words, our supply here would be lowered to the lowest common denominator. I should also point out that the companies in China are government controlled, not truly private corporations. So it would not be opening the market to fair competition either.

One area where Hong Kong is not impressive in comparison to the US is on the environment. The air is so bad here that my wife and I sometimes seriously wonder whether we should stay.

So it's good to see a focus on the environment in the SoC proposals. As a long term goal it seems a good idea to look at renewable energy, but I wonder how effective it will be. Surely the Government should be to cut air pollution in the shorter term. This means not only improving the existing power stations, but also making sure consumers use less electricity. After all, in the end it's all of us who live more who are the polluters, because we're the ones who use the power. The less we use, the less the pollution will be.

In this area, Hong Kong is very far behind many US states, such as California, where there are very tough energy efficiency standards on products and buildings. The poor design and construction mean that most buildings are little more than concrete boxes. Better insulation would greatly reduce use of air conditioners, surely one of the main users of electricity.

It's also clear to me whenever I travel over the border that a lot of our pollution comes from Guangdong. Surely the Government can also do much more to convince the Government there that much more needs to be done by Guangdong to improve the environment of the whole region.

Yours truly,

John Morgan

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

I was fortunate enough to live in Hong Kong for 3 years between 2000 and 2003. One of the very few things which blighted my enjoyment of your great city was the increasing pollution and ever worsening air quality. Since I left, I have returned every year and I am depressed to see, smell and taste the declining quality of the air in Hong Kong. I fear that unless you do something soon to reduce the pollution, it will begin to put people of visiting Hong Kong.

Your citizens are among the most friendly and hard working people I have ever been fortunate enough to know, they and their children deserve better.

Yours faithfully

John Whelan

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

☐ Urgent ☐ Return Receipt

Dear Sirs,

As a long term resident of Hong Kong, I am proud of this city but am saddened by the lack of vision & the increasing destruction of the enviroment.

This is an incredible city but my family is plannig to leave as the air quality is truly disgusting & remends me of Beijing 10 years ago. We should be going forwards not backwards & unless swift action is taken now, it will affect the prosperity of all in Hing Kong ( this includes the tycoons that own CLP & HKE too )

Sincerely

John

Subject: 我要清新空氣  
☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Future Development of the  
Electricity Market in Hong Kong Stage 1 Consultation

I am a System Administrator of the Hong Kong Jockey Club and I would like to point out the following advantage in keeping the current scheme of control.

1. No uncertainty in term of the tax paid to the government by the company.
2. The investment of the company on the transmission system will be provided.
3. The human resource and expertise of the company are strong and the development of any future plan is ensured.
4. The current reliability of the electricity supply will be provided.
5. The efficiency of the company is nearly the highest among other company in the world.
6. The company has taken a good effort to ensure the least pollution to the environment.
7. The price of the electricity is ensured within the scheme. If other scheme is adopted, it will be unknown.
8. The company has made a great effort to service the society in every aspect of the community.

Dear Sir,

Stage II Consultation on Future  
Development of the Electricity Market in Hong Kong

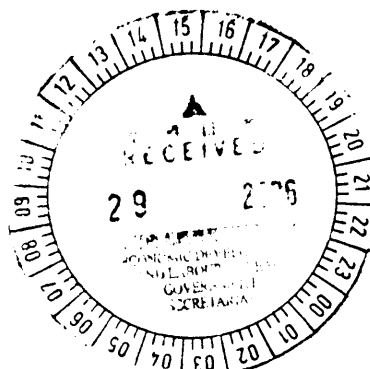

I understand that the Government has launched the Stage II Consultation on the captioned subject. As a shareholder of HKE and a consumer, I would like to express my views as follows:

Under the new regime, all capital expenditure on generation facility found to be excessive will be deducted from the rate base in calculating the company's return. I think that the government suddenly changes the rules of game is not fair to the power companies as well as discourage investment in generation facilities.

Whilst a less expensive electricity bill is always welcome, we do not want it to come at the expense of deteriorated supply reliability in the future. Hence, we would like to remind the government to have second thoughts when considering opening up the electricity market.

Yours truly,

  
JOHNNY LAU

I against the permit return will reduced from the present 13.5% to a range of 7-11% because how to justification and why to say the ROR change to 7-11%, also there is not the appropriate to determine the 7-11% ROR based on current conditions, which one know what happen in 2008, is good or not. And then the sufficient ROR also attract the huge and long-term investment required by the power industry and the insufficient investement will undermine the supply reliability and the risk.

Stage II Public Consultation

☐ Urgent ☐ Return Receipt

敬啟者:

本人就香港電力市場未來發展第二階段諮詢文件有以下之意見:

1. 電力設備之工程, 很多都需要超過十年時間投資的, 十年之專營權實在太短.  
這樣只會令電力投資者作出更不合理之決定, 就是不斷加價,  
以求在專營權到期前作出最大之回報.
2. 在準許利潤之中, 為何環保設備之準許回報是最少的, 政府不是要兩電作出環保措施嗎?

以上都是本人對香港電力市場未來發展第二階段諮詢文件之意見,  
希望本人之意見能對閣下有參考作用吧!

Subject: Comment on the Existing Electricity Market

☐ Urgent ☐ Return Receipt

Dear Sirs

Being one of the citizens of Hong Kong, the reliability of the supply of electricity is the most important concern of us (I believe & also be proven in the stage I consultation). The open of the electricity market may be a tendency of the world but how to make it success without any risk? I don't think that Hong Kong can afford any large scale termination of electricity supply like the one in USA last year!

Hong Kong is a small city but having huge economic power in the world. All kind of commercial activities are related to computer and electronic machines. The security of supply must be kept or even be enforced and enhanced. Any proposed changes which leading to the discourage of the investment is not a good decision. In my opinion, HK Government should maintain the sufficiently long term regulatory period, say 15 years or over - for providing the good atmosphere for investor to continue to invest.

The existing tariff adjustment mechanism should also be maintained. Reviewing the recent political environment in HK, I totally disagreed to government's proposal for approval required for tariff setting which is unreasonable. That's unfair to power companies to recover their costs and permitted returns under the bilateral agreement.

Power industry require a large amount investment for huge construction and maintenance expenses. The sufficient ROR is required to cover the risk and maintain the the excellent and safe supply. Over 10% is a base and I think 15% is very reasonale for this special kind of industry which is different to any other types and cannot be comparable.

Regards

Johnson C.S. Hon

We are a law firm headquartered in Hong Kong. As power supply reliability and its long term costs are very important to our operations, we would like to provide our views on a few issues related to the future development of the electricity market in Hong Kong:

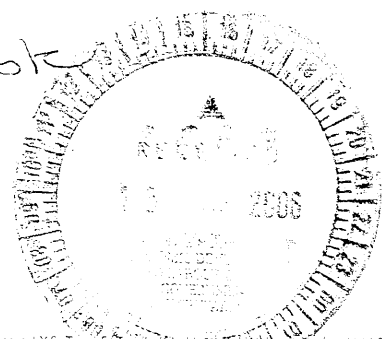

- (1) Supply reliability is essential and should not be compromised – Hong Kong enjoys a reliable and uninterrupted electricity supply which has helped secure its role as a financial centre. Any change to the existing system which has to-date delivered this reliable supply should be carefully considered. If this reliability was compromised it would have a dramatically negative impact on our operations and reputation.
- (2) Sufficient financial incentives must be provided. Although we have an interest in lowering the cost of our power supplies we are concerned that a regulatory regime that does not encourage investment, by offering insufficient returns to investors, will, in the long term, lead to supply shortages and increased costs.
- (3) The Regulatory period should be sufficiently long – A longer period than the 10 year regulatory period being proposed would encourage investment by the power companies.

We ask that you could consider our views.

Yours faithfully,

*Johnson Stokes & Master*

局長先生：

### 回應第二階段諮詢文件

我以一名市民身份，對政府推出之諮詢文件有以下回應。

#### 規管協議年期

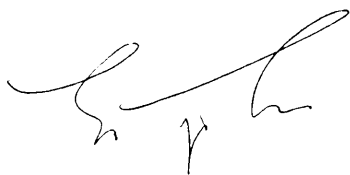

投資電力基建年期長達數十年，所以政府必須提供較長的協議年期，以確保投資者願意繼續投資。因此我認為現時的 15 年協議年期是合適的。

#### 7-11%的准許回報率太低

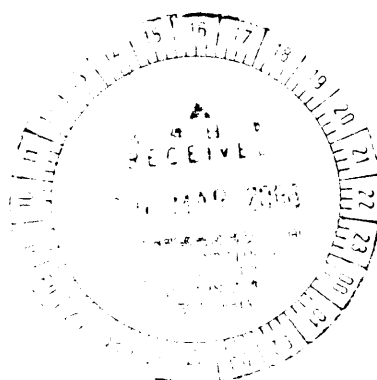

文件建議四個不同的 7-11%准許回報率，我認為建議的准許回報率是偏低的，不足以吸引電力市場投資者繼續長期投資於該行業。

我認為香港政府要把穩定的電力供應，放在考慮之首，在與業界磋商及公眾諮詢後，制訂一個切實可行的電力市場規管機制。

謝謝！

Future Development of The Electricity Market in Hong Kong  
(Stage II Consultation)

Dear Mr Ip,

Reference is made on the captioned subject. I am in great pleasure to express my views on this subject.

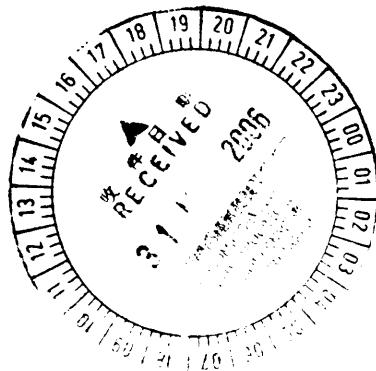

In your consultation paper, it is proposed to reduce the rate of return of the power company in the post-2008 regulatory regime. Taking into consideration the anticipated inflation and the rising interest rate in Hong Kong, your proposed 7-11% rate of return seems unattractive for continuous investment in the electricity supply infrastructure. In addition, shortening the regulatory period from 15 years to 10 years creates additional risks to the investors unnecessarily. These proposals will deter the required investment to ensure adequate and reliable electricity supply in Hong Kong after 2008. Obviously, under investment in the electricity infrastructure will undermine the overall supply reliability.

In view of the importance of the electricity supply in Hong Kong, I urge the Government to continue adopting the current regulatory regime in the post-2008 regulatory regime in order to attract continuous investment in the electricity infrastructure.

Yours faithfully,

Jolie Wong

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

☐ Urgent ☐ Return Receipt

27/03/2006 10:56

To Economic Development and Labour Bureau,

I have returned from UK after studying my masters in law and I had hoped to develop my career as a barrister and start a family in Hong Kong, and I brought my long term girl friend from UK. We have lived here for past 5 years and there has been a recent change of plan.

In short, due to the air quality changes in Hong Kong since my childhood (in 1980s), we are forced to consider moving elsewhere due to the severe air pollution. I can assure you that this is a commonly held view for those who has the opportunity of leaving HK, despite whatever attraction it still holds. It is also understood that China is the main cause of all these air pollution, and it is without doubt that for the sake of the Hong Kong economy and future in tourism that action must be taken now.

I believe I have nothing further to add to those others who wrote before me and those who will more ably after me. I only urge you to act promptly before it is all too late.

Yours sincerely,

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To The Economic Development and Labour Bureau,

I am extremely concerned about the air pollution caused by Hong Kong's power stations. I am a Hong Kong citizen for over 25 years but along with so many others, every day have to think about how much longer I or my health can stand it.

The government must take positive steps to improve its control of the electricity market, so as to restrict the massive pollution created by power generation. Back in the early 1990s I attended lectures by CLP talking about their green credentials and control of fuel emissions. These have in practice proved to be so much hot air and negligible progress over 15 years towards alternative and subsidiary generation systems, almost certainly because talk is cheap and good publicity, but implementation means money. They have no incentive to do anything constructive.

The control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities.

1. The permitted rate of return of power companies should be linked to the total emission caps set under the power companies' licences. If they cannot achieve the caps then the rate of return should be reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE other than incineration generating greenhouse gases;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. It is imperative the SAR government at last takes steps to set up meaningful and clear energy saving targets;
5. An Energy Administration should be established to coordinate the planning of the electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. The power companies should be effectively discouraged from setting up or joining in polluting power generation systems elsewhere in China; this all comes back to Hong Kong. They should be encouraged to take the lead in providing technology and investment for cleaner and contemporary RE generation systems, that the world now needs.

It is time the SAR government became a real government, and bring us back the blue sky and a breath of clean air, that we remember from not too long ago. Just look at the old postcards...

Subject: Stage 2 Electricity Market Consultation  
☐ Urgent ☐ Return Receipt

I would like to provide my views on Government Stage II Consultation on Future Development of the Electricity Market in HK as follows:

The prime focus should be on ensuring power supply reliability. The current regime works very well in ensuring power supply reliability and tariff is so far reasonable (I live in Kowloon). Agree that the next regime should be similar to the current one with no major changes.

Hong Kong and Guangdong do not seem to be ready for a regional market. Government should be mindful that moving to market opening would not be at the expense of reliability. Detailed study and planning need to be done before deciding to move to a competitive market.

If government is going to allow new suppliers in Hong Kong while having a scheme of control of the existing power companies, it needs to make sure that this will not effectively increase the tariff of other consumers due to duplication of facilities.

The air quality of HK is deteriorating. Government should work closely with Guangdong to improve air quality, rather than just blaming the power companies whose generating facilities were previously approved by the government. Giving the lowest return for emissions reduction investments would discourage investments and is inconsistent with the objective to improve air quality.

The much reduced proposed return would also lower power investment incentive. Government needs to ensure that tariff reduction is not achieved at the expense of supply reliability or air quality. The shorter duration proposed may also discourage investment (given the long lives of power assets) and adversely impact reliability.

In summary, many proposals in the consultation paper are not quite well thought through and inconsistent, and therefore need modifications. I would very much like to have a reliable power supply with stable tariff (as the current one) rather than an unreliable supply with blackouts and big tariff fluctuations. If government is pursuing an open market with Guangdong over the long term, please make sure that we do not have blackouts and tariff hikes. Also please ensure that the environment is not adversely impacted. I would not like to buy power from dirtier plants in Guangdong and suffer from worsening air pollution.

Regards,  
Jonathan

Subject: 我要清新空氣  
☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: 我要清新空氣

☐ Urgent

☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Dear Sir / Madam,

It can be seen that the disagreement on post 2008 regulatory regime between 2 Power suppliers in Hong Kong (CLP & HKE) and government have raised significantly in recent months. With the success of the current regulatory systems adopted in Hong Kong throughout years, I cannot see the short fall of the current scheme and the need in amending the regulatory system.

Consumers in Hong Kong enjoyed almost 99.99% supply reliability with affordable tariff compared with other countries such as New York / Tokyo / Paris. High tariff does not always link with supply reliability. You may remember the outage in New York on the year 2003 August.

The rate of tariff increase in Hong Kong was far behind the growth of Consumer Price Indices and other public services. Modern countries still suffer from shortage of power and unstable power supply. Remember the major power outage in 2003 August in North America. The whole North America was blackout without any warnings. There were numerous of robberies and incidents during the blackout period. Without system reliability, people life and consumer assets would be at risk.

For example, an unstable power supply may trap people in lift/escalator. Worst case, major road went out of traffic light and result in traffic jam or car accident. The above example revealed the importance of supply reliability in Hong Kong. Think about the outage of IT system at stock market and airport. It may cause substantial financial loss for local and foreign investors and tourism. In view of the above adverse consequence, it is almost essential to maintain the supply reliability. Some losses cannot be estimated like intangible cost such as its prestige reputation / images from foreign investors.

In my understanding, investment in power supply industry is capital intensive and late return of revenue is expected. Investor is not willing to provide sufficient capital for investment if they found the business return is not attractive. So reasonable guarantee of return should be ensured to assure their return is reasonable.

Normally, we expect contract with fuel supplier is more than 20 years. If the government decided to lower the rate of return to these suppliers and shorter agreement after 2008, the question is that are they still willing to invest on equipments for maintaining the same level of supply reliability. The proposed 10 year agreement also seems inadequate for power supplier as compared with their fuel supplier contract. Shorter years of agreement will increase uncertainties to power supplier. With these uncertainties, power supplier may have to sign for shorter contract with fuel supplier. Shorter contract means higher fuel cost. This may result in increasing the cost of electricity and would end up to be paid by consumers.

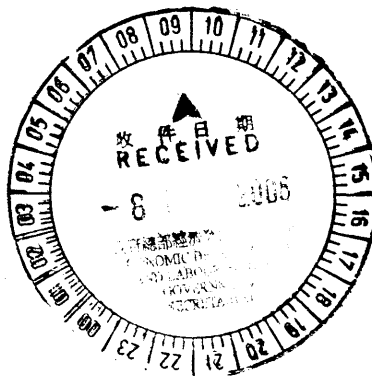

Sometimes, I realize that consumers always take it for granted in maintaining premium service from Power Supplier but didn't realize that these services had to be paid.

In view of the above, the government should really reconsider the implication by lowering the rate of return to 7.5% - 11% by listing out the pros and cons of the

proposed rate of return and shorter years of agreement from different perspective. At the same time, when imposing stringent environmental regulation to these power suppliers. Government had to make sure their return to be in line with government expectations.

Regards,

Joseph Cheung

Subject: Re: Future Development of the Electricity Market in Hong Kong  
☐ Urgent ☐ Return Receipt

In considering the future development of the electricity market in Hong Kong, we should consider the followings:

1. Supply reliability
2. Public & Occupational Safety
3. Environmental Performance
4. Costs (Social & Economic)

Over the past decades, the service providers have proved and executed Safety and Environmental responsibilities and initiatives in the neighbouring areas and provided reliable services in the electricity supply

As a World-class city, we cannot afford to have blackouts, uncontrolled emissions and any risk that may jeopardize the public and our workers. The current regime works reasonably well and there is no particular need to change the existing best practices.

As a staff of a public utility, I prefer the status quo of the current Scheme of Control be maintained.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Josephine Bersee

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Josephine Chuk

22nd March 2006

Economic Development and Labour Bureau  
(By Fax : 2868 4679)

Dear Sirs,

I am a consumer of Hong Kong Electric, I have the following opinion:-

I believe all goods and services providers should have a reasonable return. In the provision of electricity, I fully support the Government's Policy Objective. I think Hong Kong Electric has been very reliable in the past and has done a good job so far.

I think specifically :-

1. Regulatory period should remain 15 years as this is a long term investment for any electricity company. It is in the public's interest to keep an operator committed for as long as possible, 10 years is unnecessarily short if the company is performing satisfactorily.
2. Environmental consideration is very important. Government should insist on a very high standard which must not be compromised, but ROR should not be directly linked to emission performance as there is already a penalty system. ROR should be linked to the overall performance of the company, such as reliability, service efficiency, etc.
3. The ROR should be the industry norm, and an extra incentive if their performance is outstanding.
4. Government should reserve a right to step in if the tariff adjustments are unreasonable in the prevailing circumstances. If Government is subject to political pressure, Hong Kong Electric should not totally divorce itself from it, as long as the overall ROR over the 15 year period is not affected.

Yours faithfully,

Josephine Ong

Subject Support Competition Law

☐ Urgent ☐ Return receipt ☐ Sign ☐ Encrypt

Dear Governor,

I am totally support o have this Competition law in HK. HK is so small that few big players can CONTROL the market. They always "Abuse of a dominant market position" and exercise unfair practices to small players.

e.g., the oil companies fixed the high price together, retailers deducted suppliers' payment because of low margin, Fix pricing and pressure on suppliers to kick out other retailers joining the market (Carrefour).....

If we can have this law legislated, this will definitely help HK to have a FAIR TRADE economic envirnment than now.

Thanks for your consideration.

Regards,

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 我要清新空氣

☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: HK Electricity Market Consultation II  
☐ Urgent ☐ Return Receipt

Dear Sir,

I refer to paragraphs 2.50 and 2.51 of your consultation paper for the captioned. To safeguard against deliberate installation of excessive generation capacity, it proposed to exclude all capital expenditure relating to excessive capacity from earning any return. (currently only 40% or 50% of the capital expenditure is excluded for CLP and HKE respectively.)

I found that no rationale is presented for this doubled penalty for the 2 utility companies. On the contrary, the consultation paper stated that "This approach may, however, result in the power companies deferring investment in generation assets, thus affecting supply reliability." I agree with this statement and see no reason to increase the penalty as proposed.

In reality, major capital expenditure, including the addition of generation capacity, has to be reviewed by Economic Development and Labour Bureau (EDLB) (or whatsoever organization formed as a result of this consultation) before proceeding. The utilities would not be 100% responsible for the excessive capacity. Thus, the current penalty mechanism is more justifiable.

Regards,  
Jovita Cheung

March 27 2006

Economic Development and Labour Bureau,  
2/F., Central Government Offices,  
Main & East Wings,  
Lower Albert Road,  
Hong Kong.

Dear Sir,

Stage II Consultation Paper on Future Development of  
the Electricity Market in Hong Kong

I understand the Government has launched the Stage II Consultation on the captioned subject. I would like to express my views for the above.

As you all know, the Mainland has a poor track record of supply reliability and adequacy. Therefore it would be dangerous for Hong Kong to rely on the Mainland for electricity supply in the future.

The importance of my concerning should ensure that there is sufficient supply to service Hong Kong. I am enjoying that there are reliable and safe power supplies at reasonable prices in Hong Kong.

In my view, the Government has to consider very thoroughly in all aspects if there are any changes for the terms of the current Scheme of Control Agreement.

Yours faithfully,

A handwritten signature in black ink, appearing to be 'Joyce Chan', with a long, sweeping horizontal line extending to the right.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

4 April 2006

Economic Development and Labour Bureau  
2/F, Central Government Offices,  
Main & East Wings,  
Lower Albert Road,  
Central, Hong Kong

Dear Sir/Madam,

I fully support the paper put out by WWF and the Civic Exchange on the need to change the way electricity

is managed. I am only one voice but believe me, when I say that everybody in Hong Kong feels strongly

about what is happening to our air through wasteful electricity generation. I write on behalf of all those people who think that it cannot be changed. It can - as long as there is the political will to do so. We do not need to pay the electricity companies based on their capital investment - in today's situation, this is irresponsible. The profit that they are allowed should be based on demand and on electricity produced in an efficient, environmentally sustainable manner, in particular employing methodologies that do not use

carbon fuels.

Yours faithfully,

Joyce Tang

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

Please can you tell me if you have been looking out of the window recently and noticed the smog? When was the last time you saw a blue sky?

I have been so disturbed in the past year to see the air quality is just amazingly poor, and yet the Government is not doing anything about it. Having two children make me start to think whether I should let them grow up without seeing the blue sky.

I am a locally born and raised HK citizen and had my education in the UK. I have a master degree and am a professional working in the education sector. My family has not considered emigrated elsewhere before 1997, but now, we are making serious thinking of leaving Hong Kong for good if the environment is deteriorating so drastically.

I really hope I do not have to abandon Hong Kong because of the air quality.

Yours sincerely,

Judy Au

2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

I RECALL THE WONDERFUL SCENERY ALONG THE WATERFRONT OF VICTORIA HARBOUR THAT I SAW AS A KID. I RETURNED TO LIVE IN HK IN 1997. NOW AT SOME DAYS THE SMOG MAKES HK LOOK LIKE IT IS PREPARING FOR DOOMSDAY.

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Julia L-nneker

30<sup>th</sup> March 2006

Economic Development and Labour Bureau  
2/F Central Government Offices,  
Main & East Wings,  
Lower Albert Road,  
Central,  
Hong Kong.

Dear Sir,

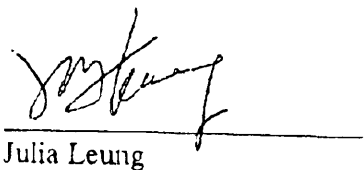

Consultation Paper on Future Development of the Electricity Market in Hong Kong  
Stage II Public Consultation

I have read the above Consultation Paper and my comments are listed below for your consideration:

I don't support the proposal to open the electricity market as I do not think the electricity supplier(s) from China can provide Hong Kong a very reliable and good quality supply in view of the fact that there is shortage of electricity in China at present. Even they can, the electricity price may go up in an open market some days, like the situation in U.K. at present. When the market is opened, a considerable amount of employees of the two power companies may lose their jobs and create more social problems.

I suggest keeping the present arrangement and do not wish to see any blackout and electricity supply problems happen in Hong Kong in future.

Yours faithfully,

  
Julia Leung

Dear Sir,

My comments on your consultation paper are: -

1. We cannot rely on China as competitive supply because its track record is very poor.
2. Reusable energy is expensive and this may increase the tariff.
3. 10-year regulatory period and 7% rate of return discourage investment and lowering reliability may harm HK's economy.

Thank you.

Julia.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Julian Bannigan

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong (Stage II Consultation - Submission of Views & Comments)

☐ Urgent ☐ Return Receipt

Economic Development & Labour Bureau  
2/F., Central Government Offices  
Main & East Wings  
Lower Albert Road, Central  
Hong Kong

Dear Mr. IP - Secretary for Economic Development & Labour,

Consultation Paper on Future Development of the  
Electricity Market in Hong Kong  
Stage II Consultation - Submission of Views & Comments

I refer to the Consultation Paper released for public comments on 31st December 2005. After reading the Paper, I consider there are substantial areas requiring elaboration and clarification in parallel with the higher priority needs to compile some fundamental government policies ahead of initiating any fundamental changes in the present regulatory regime - The Scheme of Control Agreements with the two power companies. Before the SAR Government could inform the public further on those issues, my primary comments on the Paper are:

1. HK consumers have to be assured that we do not suffer the corresponding extent of drop in electricity supply reliability and service quality following a 10 ~ 20% decrease in tariff as advocated by the SAR Government after 2008. Otherwise, I would strongly request to maintain the present status quo in order to enjoy this essential commodity - the electricity, in my life and study.

2. If the two power companies could only earn the lowest rate of return on emission reduction investments, I could not see where is the necessary incentive for the two power companies to improve the environmental performance of their existing coal-fired generation facilities. Before we build extra generation facilities with more environmentally friendly fuel or renewable natural resources like wind, the two power companies should be encouraged to retrofit modern and efficient emission reduction equipment on their existing machines to save consumers/taxpayers money.

3. The proposed changes to the present Scheme of Control Agreements are too complicated and controversial to enforce. I gravely concern the new regime will lead to numerous costly litigations which at the end will be either borne by taxpayers or consumers in HK.

4. I could not find any assurance nor commitment on the Paper that Guangdong Province has the obligation and resource to support our renewable energy development. The SAR Government should explicitly inform the public how and where we could lower the emissions from the two power companies and the possible contribution from indigenous renewable energy based on this unilateral presumption.

Your attention and due consideration of my above comments would be much appreciated.

Yours sincerely,

Julian Jia Qiao Yee

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Julian Lyden

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Julian Quail

Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Something needs to be done quickly to sort out the current pollution problems. I have lived in HK for 13 years and things have got progressively worse. Friends are now leaving to escape the problem that is affecting their childrens health. I now have allergies that I never had when I first arrived in HK

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；

2. 可再生能源的投資可享有較高的准許回報率；

3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；

4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；  
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；

6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。  
懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Hong Kong is dear to the heart of a lot of overseas Chinese and Westerners. Many of these people are world class talent Hong Kong employers would like to attract to accelerate their business growth and to contribute to Hong Kong Government's objective to build a stronger economy for the benefit of its citizens. Unfortunately many such people are turned off by the pollution in Hong Kong. Many of my business friends would rather set up their business in or accept an assignment to Singapore or Australia because the air there is inhaleable. Some of my business friends have left Hong Kong because the pollution here has affected their health or their family members' health.

Pollution in Hong Kong has led to a sharp rise in chest diseases such as asthma. This in turn leads to increased use of Hong Kong's public health services -- a cost factor that should be seriously weighed by the Hong Kong Government and its tax payers.

Maybe a solution to be considered is the opening up of the electricity supply market to more socially responsible and environmentally friendly providers that operate in other countries. FOR THE FUTURE OF HONG KONG AND ITS PEOPLE WE NEED TO DO THE RIGHT THING NOW! PLEASE DON'T SPEND AN UNDUE AMOUNT OF TIME IN THE TALKING AND BARGAINING STAGE -- I'VE OBSERVED THAT TREND HAS AFFECTED HONG KONG'S ABILITY TO DO THE RIGHT THING ON A TIMELY BASIS. THANKS FOR LISTENING!

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

31<sup>st</sup> March 2006

The Secretary,  
Economic Development and Labour Bureau, HKSAR

By Fax : 2868 4679

Dear Sir,

RE : Stage II Consultation On Future Development Of The Electricity Market In Hong Kong

With reference to the captioned consultation paper published in December 2005, I wish to express my opinion below.

1. As highlighted in the report (Item 2.23), unlike the deregulation of telecommunication market, Interconnection does not give consumers freedom of choice and hence would not bring along price cut as expected. Unfortunately, I believe the general public has been misled by previous propaganda on the exaggerated benefits of interconnection. The Government must promptly emphasize and rectify this misconception or it would on one hand jeopardize the electricity supply reliability as seen in overseas market and on the other hand disappoint consumers and cause resentment to the Government.
2. The period of agreement mentioned in Item 2.37 should base on the pay-back period and depreciation of the power plant assets. If most of these electrical and civil installations have a payback and depreciation period of 15 – 30 years, the agreement period should be 15 years to encourage investment and to maximize the utilization of the assets, which in turn would hopefully lower the capital cost and electricity bill amount in the long run.
3. Every asset used for providing electricity is a vital part for delivering safe, clean and reliable electricity services. They must match each other in terms of quality and performance. Suggestion mentioned in Item 2.58 to distinguish returns for different assets is unwise. On one hand, it causes unnecessary administration effort for the power companies and supervision effort from the Government. On the other hand, it would deter the investment incentive on assets with lower return rate which would introduce instability to the power system. To exaggerate the situation, how could a car with the best engine run on deflated bicycle wheels or vice versa ?
4. The rate of return proposed in Item 2.56 is only a one-sided will and would not be accepted by the power company investors. Considering the rate of return for the following business sectors and their investment involved and asset types :
  - 5 – 10% commission on expenditures for real estate management (with no investment and assets !)
  - around 10% for bus company
  - 10 – 15% for international auctioneers

A 10 – 15 % rate of return for the power supply business does not seem excessively as long as there is adequate Government supervision.

Last but not the least, after reading your statements in Item 2.18 and 2.20, one can draw the picture that the power companies are just similar to a privately owned coffee shop. Why would and how could the Government insist to control the price of coffee of that shop and what if the Government fails to achieve a bilateral agreement ?

Your Faithfully

Julius Ho

Subject: Future Development of the Electricity Market in HK - Stage II  
Consultation

☐ Urgent ☐ Return Receipt

**Dear Sir,**

**Browsing through your consultation paper, I noted the following provision under Environmental Regulation:**

**"to adopt additional measures, under the economic regulatory arrangements, to minimise the costs to consumers in meeting the emission reduction targets and, to promote energy efficiency and conservation, environmental improvements, and use of renewable energy in electricity generation."**

**I am always a believer of "those who enjoy something should pay for it". Now that electricity is enjoyed by all users, they should be responsible to pay! for the emission reduction equipment. It is not fair to charge only the electricity companies for the costs. Just take water as example. Water users are charged for the disposal of dirty water. The same principle should apply to the electric utilities.**

**Regards,  
Junie Kwok**

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
2. 可再生能源的投資可享有較高的准許回報率；
3. 制訂減少燒煤的目標和時間表；
4. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
5. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

下亞厘畢道  
中區政府合署中及東座二樓  
經濟發展及勞工局局長

敬啟者：

電力市場第二階段諮詢

我們是一間專門提供豐富及優質禮品設計和精美印刷服務的公司。我們十分關注本港的競爭力，鑑於穩定可靠的電力供應是香港的一個重要的競爭優勢，而貴局今次的諮詢對電力市場影響深遠，故致函表達我們的見解。

現時的管制協議行之有效，使香港能夠擁有一個與先進國家比美的供電系統。諮詢文件大體上保留了管制協議的主要元素，對此我們認同。但部份建議仍有值得商榷的地方。

諮詢文件建議縮短規管年期；我們認為電力基建投資涉及巨額金錢，一般都要幾十年後才能回本，如果規管年期訂得過短，會增加投資風險，令投資者卻步。諮詢文件又建議下調准許回報率；我們認為回報率某程度上會影響供電可靠性，所以過低的投資回報率可能導致投資不足，因而危害供電質素。若果規管年期和投資回報水平設定不適當，將帶來電力短缺的風險，最終會嚴重影響經濟發展。

隨着社會不斷進步，市民大眾對公共服務行業的要求日益增多。我們認為政府應理性地與兩電磋商一個雙方都接受的規管年期及投資回報率，以保證香港可以維持穩定而足夠的電力供應。

此致

經濟發展及勞工局局長  
葉澍堃先生

Subject: Consultation Paper on the Future Development of the Electricity Market in Hong Kong – Stage II Consultation

☐ Urgent ☐ Return Receipt

Dear Sir/Madam:

I support the current Scheme of Control which has served Hong Kong well for many years. For the last forty years, we have enjoyed safe, adequate and reliable electricity supply at tariff rates which are affordable, when benchmarked against major cities in the world.

I set out below my views on the Stage II Consultation Paper:

(1) The Government's Policy Objective is to ensure that the public can enjoy reliable, safe and efficient energy supplies at reasonable prices, and to minimize the environmental impact caused by the production and use of energy. I am afraid that some of the proposals in the Consultation Paper will not help to achieve that Objective.

(2) The two power companies should be encouraged to invest in emission reduction facilities to help deliver the Policy Objective of lowering emissions. The proposal to offer lower return for emissions control equipment is illogical and counterproductive. Instead of lowering the return, the companies should be incentivised to invest in the most advanced emission reduction facilities.

(3) Importing power from the Mainland will almost certainly lead to :

YII More pollution for Hong Kong – we will have no control over the types of fuel that the Guangdong power stations use to generate electricity for Hong Kong;

YII Less reliable electricity supply for Hong Kong, possibly resulting in brownouts and blackouts. It will not be prudent to rely on them for supply when they themselves have a serious supply shortage.

(4) The Government's proposal to vary the rate of return allowed for different types of assets is irrational and unreasonable, given that the two power companies operate an integrated supply chain. Every element of that chain, whether it be generation, transmission or distribution is equally important and essential to providing reliable supply.

(5) The duration of the new regime should be at least 15 years to reflect the long lead time and lifespan of investments in the electricity industry, which far exceed the term of the agreement.

(6) Returns must be set at appropriate levels and commensurate with the (additional) risks assumed by the power companies. The proposals give the Government wide discretionary and ill-defined powers, not least in determining future emission caps and adjusting tariff levels. The proposals also create great uncertainty by envisaging lower returns for investments which reduce emissions levels, whilst at the same time seriously tightening emissions standards with added by unspecified penalties. I do not support the proposal to reduce the permitted rate of return to 7-11% .

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Justin

Subject: 我要清新空氣  
☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Justine Shui
