Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Electricity Generation
☐ Urgent ☐ Return Receipt

Dear Sirs,

Hong Kong has three strategic landfills and several sewage treatment plants. All the landfills generate commercially viable quantities of gas and sewage treatment plants can be equipped with methane digestion equipment.

I would like to suggest that gas from these sources is used to generate electricity. I know that in many countries this is done and there should be no reason why we can't do it here.

Yours faithfully,

R E Fisher

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

28/03/2006 09:36

To: Economic Development and Labour Bureau

Hong Kong is my home, I love it as I love my family. My heart breaks everyday when I look outside my window. The pollution problem is raidly worsening and I now feel no choice but to reconsider where I live. My partner and I are High earning professionals, contributing significantly to Hong Kong in both taxes and our contributions to Human Resource practices in the region. We lmay eave, as many others are choosing to do, and HONG Kong will loosing talent, income and ultimatey competitiveness.

I demand greater control over air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Rautherson

作為一位鼻敏感病患者，本人覺得清新空氣比電費下調更為重要；香港政府的醫療支出已經太沉重，電費下調只會將金錢轉至醫療系統。

政府應以獎賞方式鼓勵電廠安裝大型減排設施以達致2010的減排目標；懲罰性的扣減回報率只會帶來短視的投資，未能解決真正的問題。

再生能源的產電量及高價亦未能解決嚴重的環境問題。

總結：本人相信電費下調慳下的錢並不夠看醫生。

Rachel KO

注：

香港每年因空氣污染而付出的醫療開支高達38億元。

http://www.inmediahk.net/public/article?item_id=14785

鼻敏感是香港很常見的都市病，估計患者人數高達六十至一百八十萬人。

<http://www.ffwpu.org.hk/globalft/Healthy.html>

(兒童) 有超過三成七在過去十二個月內有鼻敏感症狀，及四成二人曾經患過鼻敏感，情況相當嚴重。

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Re: the pollution you call haze

You just lost your best marathon runner (Mark Williams) who left for New Zealand because the air is so bad (front page SCMP City this week). I am one of your best female marathon runners. I can't train here and will do the same. I am a 33 year old extremely healthy woman who coughs and splutters every day and has constant itchy eyes. I've lived in Poland, France, the UK and Sri Lanka and I've always been fine.

Think about all the expat tax and expat spending you are losing in the government coffers because expats are leaving or staying indoors.

Filthy air is associated with the developing world but I came here to live in the first world. If you want to market HK as a first world city, you have to start making your executives and politicians think in first world terms. Clean up and take responsibility for your corporate greed, stop kowtowing to fat cats in business and stop lying via your observatory website that the pollution is 'fog' or 'haze'.

Subject: Petition - clear Hong Kong air

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies-- licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. Demand management must be built into the profits of the company. There must be a mechanism where they profit if they can significantly reduce energy demand. At present they only profit from Increased demand.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a regular visitor to Hong Kong for business and pleasure, I am very much concerned about the air pollution caused by the power stations. I strongly request the government to encourage control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. When visiting Hong Kong I take long walks to places like Stanley and Victoria Peak. My eyes and lungs burn on each hike and visibility is quite poor. It is time to eliminate this health risk to the citizens and visitors of Hong Kong. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Respectfully,

Ralph Hawkins

Subject: 我要清新空氣

☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong permanent resident, I am very much concerned about the air pollution caused by the power stations.

A. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those which cannot achieve the caps should have NO rate of return;
2. The investment in renewable energy (RE) should earn a relatively higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas and pollution;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government set up a concrete and clear energy saving target;
5. An Energy Administration should be established to coordinate the planning of the electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be made a top priority, including the regional blueprint of renewable energy development.

B. I also demand that all Truck Transport (including Container and Dump trucks) be targetted for radical improvement of emissions, perhaps by substantive support from Government for renewal of the fleet incorporating the latest engine technology. This is currently overlooked as a pollution source and is extremely serious.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 有關香港電力市場未來發展的意見

☐ Urgent ☐ Return Receipt

30/03/2006 15:08

本人對政府第二階段諮詢文件，有關引自內地的電力供應有以下的意見：

1. 有關建議沒有清楚說明引入內地供電的安排，香港市民應如何選擇和可能要面對的供電風險和穩定性。
2. 內地發電主要靠燃煤發電，燒煤如減排措施做得不好，會影響空氣質素。香港鄰近內地，有關污染微粒會隨風吹至香港，影響香港的空氣，影響香港市民健康。
3. 現有本港有關針對發電的環保要求和罰則，是否都同樣地適用於來自國內之電力的公司。否則，這對兩電都不公平。
4. 政府如果要引入內地電力公司供電給香港，除要考慮電價問題外，更要慎重考慮本港市民因此而需要承擔的風險和後果，例如供電的可靠性及空氣的質素。
希望政府有關部門謹慎地制訂有關計劃，為香港市民的利益和健康多加考慮。

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Our Ref. : RO/T/0118/2006

17 February 2006

Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Sir,

Stage II Consultation on
Future Development of the Electricity Market in Hong Kong

We are a medium sized construction company in HK and would like to express our views on the Stage II Consultation.

Although we would welcome the reduction of the electricity bills, as a responsible citizen of HK, we feel that we should voice out our concerns in the above consultation paper.

This reform document should aim at to balance the interests of various stakeholders i.e. consumers, power companies, investor and the public at large.

Under these considerations, we think that the computation of the rate of return should be simple and easily understood and administered. A reasonable single tier return based on average net fixed asset is the most suitable solution. The percentage of permitted return must be high enough to provide an incentive for power companies to invest and must be low enough to control a reasonable tariff. To make the business viable, the rate of return should also be reasonably higher than the rate of borrowing by the power companies. However, the paper has not provided any justification on the permitted return figure proposed of 7-11%.

Once the mechanism of how the tariff has been determined, there should not be a second layer of control/approval procedure. The business environment of HK has pride itself on having simple and clear regulatory control. With the set up of the proposed Fuel Clause Account and the Tariff Stabilisation Fund to stabilize the tariff level together with a single tier permitted return, there is a balance between the investors and consumer's interest. We feel that a second layer of approval procedure is unnecessary and dangerous and taking this issue into the political scene should be avoided.

The electricity distribution business is a natural monopoly and we support to retain the bilateral agreement between the Government and the power companies.

Cont'd

RAY ON 威安建築
CONSTRUCTION CO., LTD.

ESTABLISHED 1975

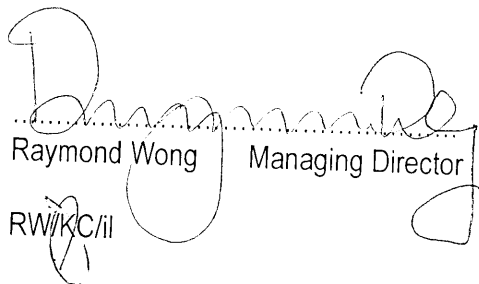

- Building Works
- Site Formation
- Foundation
- Demolition
- Fitting-out

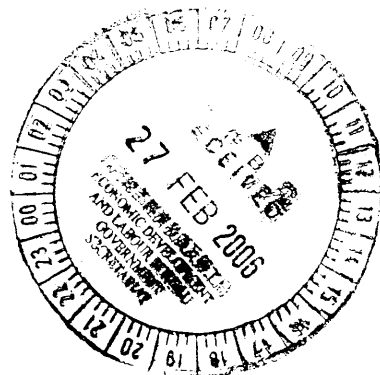

Our Ref. : RO/T/0118/2006

There is a certain peculiarity for the electricity business in that the commitment and return is exceptionally long (30 years plus). The period is much more than many types of business such as real estate development, other utilities etc. We thus think that a regulatory period of 15 years is reasonable for this type of business.

Thank you for your attention.

Yours faithfully,
RAY ON CONSTRUCTION CO., LTD.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Stage II Consultation on the Future electricity Market

☐ Urgent ☐ Return Receipt

Dear Sir,

In response to the above consultation, I would like to submit my opinion as follows:

1)The proposed 10-year agreement period is far too short as the lives of the generating and other equipment used by power companies usually last for 30 years or more. The 15-year agreement period as for the past SOC Agreement appears to be adequate and lowering this operating period will definitely deter investment due to increased risk.

2)The investments by power companies are very long term in nature and intrinsically risk-bearing. The proposed rates of return in the range of 7-11% are not attractive when the standing best lending rate stands at 8% (and expected to rise by another 0.5% in the coming few months). A reasonable rate of return is essential to keep the power companies in good shape and sustainable in upkeeping their investment on equipment and human resources to provide quality services and supply reliability to citizens of Hong Kong.

3)Introducing different rates of return on different assets is apparently unnecessary and in fact unfair because the cost of capital for all these assets are the same for the power companies. As mentioned in the consultation paper, the administration costs will definitely increase and in the end these will be reflected on the tariff itself. In addition, inevitably a lot of argument between the Government and the power companies will arise as to the classifications, and hence the rate of return, of the assets.

I sincerely hope that the Government will take into consideration my points above in mapping the future policy in the Hong Kong electricity market.

Yours sincerely,
Raymond Choi

Subject: My Views of Government's Consultation Paper on the Future
Development of the Electricity Market in Hong Kong - Stage II
Consultation

☐ Urgent ☐ Return Receipt

Both companies have provided excellent, reliable and stable of electricity supply to

Hong Kong citizens. I am highly appreciated their great contribution to us. However, at the Stage II Consultation Paper, I was absolutely disappointed. It does not have a clear energy policy and does not have a clear plan to migrate to a competitive market. In addition, it does not have adequate incentives to encourage appropriate investment on facilities and improve their productivity.

Right now, the present SoC mechanism is running very well. We should not change it, but maintain it. Based on this, we should consider providing an extra incentive to encourage them to do better and at the same time to let them earn more on profit.

This new mechanism would be considered to use the present permitted return (13.5%) as a base line. If they ! could operate their utility business more efficient and effective (for example, tariff reduction), it would allow them to earn more than 13.5% based on asset. Otherwise, their permitted return could be reduced. Of course, no matter what happen, they should maintain the electricity supply under a high reliability and stability condition.

As! a citizen, I expect to have a low electricity tariff. However, it is not that important to us because the electricity bill is only a small part of our family utility expenses. Actually, we pay a great portion on telecommunication bill rather than electricity bill. Therefore, again, STABLE and RELIABLE electricity supply is far more important than others.

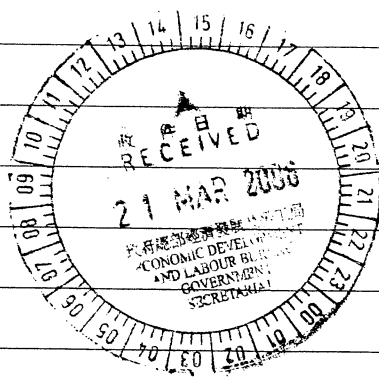

As a summary of my view, I propose we should maintain the present SoC system with the 2 electricity companies, but add an incentive system to encourage them to reduce tariff and increase productivity.

Raymond Fan

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 我要清新空氣
☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Stage 2 Consultation Paper

☐ Urgent ☐ Return Receipt

Dear Sirs,

Please find attached my comments on the subject as per the attached.

Raymond Lau The Government of HK SAR.doc

The Government of HK SAR
(via Email)

27 March, 2005

Dear Sirs,

Future Development of the Electricity Market in Hong Kong –
Stage II Consultation

One of the important factors where Hong Kong excels as an ideal place to do business is the integrity of her infrastructures including of course the power supply. For Hong Kong to sustain her economic growth, such factors must not be allowed to vanish.

We understand that the current regulatory mechanism of the power supply industry will be reviewed from 2008. For this we wish to express our views to the Hong Kong Government in making any future decisions in this aspect.

The future regulatory mechanism should not emphasis on the profit allowable as a percentage of the fixed asset investment. Instead it should focus on the value of electricity to the consumers and any approval for any tariff increase should be judged against certain commonly known facts and figures:

- The trend of the electricity tariff,
- The trend of consumer price index,
- The quality of the power supply including reliability and service,
- The trend of emission levels,
- The tariff of neighboring countries,
- The track record of community service and non-profitable business.

For example, as a consumer, we shall not be dissatisfied if the power supply company makes 30% profit on its investment as long as its tariff has not increased over the previous year and that its reliability and emission performances have not deteriorated. We highly appreciate the efforts made by CLP Power in freezing the tariff for the past 8 years and the rebating of cash to the consumers.

In a free economy, any enterprise should be encouraged to make profit by improving its internal efficiency instead of pure investment. For the power

supply industry, there are lots of scopes in this area, to name a few:

- Improving the load profile by vigorously promoting DSM hence rendering all generators to run at optimum load. This also defers the need of additional generators and hence reduces emission;
- Maintaining all equipment at tip top and hence most efficient conditions . Better maintenance is actually discouraged under the current Scheme of Control as it doesn't bring any allowable profit but increases operation costs.

In addition, we are of the opinion that increasing the capacity of the current interconnection between Kowloon and Hong Kong Island should be a viable proposition as it helps to defer the requirements of future generators in the Hong Kong Island. We hope the Government should act as a mediate to make this happen for the benefit of the Hong Kong people and without sacrificing the interest of both power companies.

The introduction of new players could create lots of disorder and inconvenience to the community. The Government should look at what real benefits it will bring to the community as a whole before encouraging new entrants to the market.

Your kind attention is highly appreciated.

Yours sincerely,

Raymond Lau

回應香港電力市場未來的發展第二階段 諮詢文件

蘇偉文

香港中文大學工商管理學院副院長

羅剛傑

香港中文大學工商管理學院研究助理

在二號報告中，政府對於電力公司的資產回報率分開計算，其中最低的是除硫的減排設施，而其中有關環保能源的投資回報率相對較高。無疑，政府這項政策的目的是為了用較高的回報率，吸引電力公司多作環保能源發電的投資。

但是，在推行全天然氣發電之前，我們必須留意其供應穩定性和可持續發展性，若有朝一日香港發電廠缺天然氣，而香港又沒有用其他的能源發電而大規模停電，不是任何一個政府部門或電力公司能負擔得起的。

不過，香港的燃煤發電廠，也是可以用天然氣作緊急發電，但若果沒有長期購煤的合約，到緊急發電時才大量購入燃煤，必定會令到電力公司的成本大幅上漲，也會對供電的穩定性產生懷疑。

因此，我們並不建議香港以全天然氣發電，建議香港政府應加強鼓勵有關再生能源的研究項目，核准比較高的使用再生能源和使用清潔能源方面之回報率，令電力公司有足夠經濟誘因去發展適合香港的再生能源，一方面長遠解決能源短缺的問題，另一方面也能減輕香港的空氣污染。此外，為了進一步平衡一次性能源在再生能源被廣泛應用前的組合，適量的燃煤發電應予以保留，並訂下污染大之發電能源佔總發電量的最高總百分比，訂立透明的環保要求及回報率的階層，發電廠如果能達到某個環保水平，就能獲得某個核准回報率。如果這種發電的環保要求能達到清潔能源的排放水平，政府應允許電力公司有與清潔能源的許可回報率。

回報率按資產分類

在二號文件中，政府提出把資產分類，可再生能源之基建設施是有最高的回報率，目的為鼓勵電力公司投資於可再生能源之上，而發電和配電之回報率較低，而減排設施則的

回報率則在最低之列，政府的目的是為了盡量避免由用戶承擔減排裝置的開支。

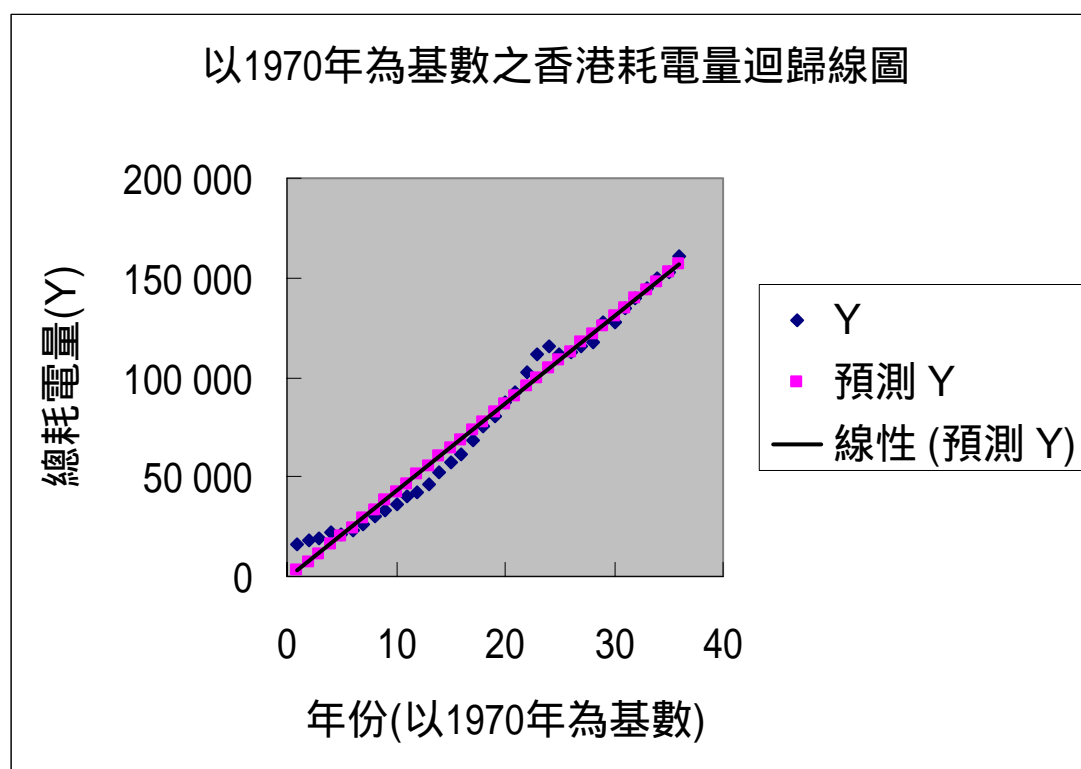

如果可再生能源基建的投資比其他的投資高得多，的確能夠吸引電力公司的投資，但現時香港在可再生能源的技術並不完全成熟，供電不穩定的隱憂仍然存在。

而且，發電的投資不能一概而論，把資產簡單分成三類，在分類及監管的過程中，當中行政費用的增加和效率的降低，電力市場將得不償失。

因此，我們以為訂立多項實質目標，例如穩定性、安全性、環保、服務質素、可再生能源研究等等，並訂立清晰透明的階層和相對應之回報率，比將資產分類來得實際。

回報率下降

在 70 年代，香港政府為了鼓勵電力公司投資，把電力公司的許可回報率訂在 13.5%至 15%之間，這是因為當時香港的發展仍在起步階段，難以吸引投資者作比較高及長時間的投資。加上 70 年代末期的香港主權前途不明朗因素，政府的保障回報是一項足以彌補當時前景不明朗的投資誘因。

在這項迴歸計算中，其結果之顯著值為 9.74059×10^{-32} ，其值足以顯明其預測可信，而其標準誤差是 6173.626 百萬兆焦耳，只佔 2005 年售年量不足 3%，而且在近十年間的殘差比 1970 – 1990 年之間的殘差明顯收窄。可見電力市場的增長比 70 年代更可以預測。

不過，如若政府減低電力公司的准許回報，根據兩電的財務報告，電力公司的大部分成本都是固定成本，例如長達二十五年的能源供應合約，這些投資都不是可以在短時間內減縮的。在商言商，我們並不以為應大幅減低電力公司的回報率，因這對電力公司的盈利有很大的影響，可能會影響電力公司的營運意慾；適當的下調回報率，對兩電來說較可以接受，也可以回應市民的訴求。

環保政策

政府在二號報告書中，把減排設施的回報率調至眾資產中最低，因為既然電力公司能以環保作為理據，投資於減排設施之上，把資產擴充，收入也會因而上升。但是從投資者的角度，這低回報率的投資是相對不吸引人的，這樣，電力公司為了吸引投資者，將來只會把減排設施設計至政府要求的最低水平，欠缺改善及改進的動力。而政府一方面把減排設施的回報率調低，「鼓勵」減少投資減排設施，又收緊污染物排放的標準，若不是政策矛盾，就是從電力公司的盈利中資取金錢，對電力公司不公平。

開放電網

在二號文件中，其中一項爭議性最大的是開放兩電的電網。電網是兩年的最大資產，亦是兩電的最大投資。政府在二號文件中對開放電網只提供了方向性的建議，並沒有具體的開放方式和路線圖。開放電網的主要目的是在自然壟斷的行業引入競爭，理希望令市場有更優秀的服務及令消費者獲益，但一旦開放電網，供電的穩定性、產生大停電的風險，卻是不能忽視。由於開放電網，對於電網內的突發事故的權責會變得模糊，反應效率也會下降，服務質素和穩定性會隨之而下降，開放電網實在不宜倉促間推行。

而且，甚麼是最適合的開放時間，更是值得討論的問題。如若政府為了開放而開放，急於在 2008 年新監管合約時推行，會打亂現在的市場秩序。但是，現在政府在二號文件中，對開放電網沒有明確的方向或指引，會令電力公司無所適從，不知該怎樣為開放電網及市場預備，一樣會阻礙電力市場的發展。

監管架構

有關電力監管之政府部門，包括環保運輸及工務局、環境保護處、機電工程處等等，在監管方面比較分散。在這次的電力市場改革中，政府建議繼續沿用現在的監管架構。

但是，在現在的分散的監管之中，政府沒有一個專有的部門去處理電力及能源的事項，導致今日政府與電力公司的欠缺溝通，造成電力公司和政府之間關係的緊張。因此，我們以為一個單一部門可以更清楚電力公司的運作情況和技術困難，對保障服務質素、安全和穩定性會比現時政出多門的容易管理。

Dear Mr. Yip Shun Kwan,

Electricity Scheme Control
II Stage Consultation

I fully support the Government to suggest the profit of return from 7% to 11% according to type of assets and application of environmental control.

I have heard from my friend who is now working in the Hong Kong Electric Co (HKE) that Mr. Wan Chin Tin of HKE urged each staff including their family to write more letters to reject the Government's suggestion otherwise they will be dismissed.

As these letters are
written under pressure,
please do not count
these letters as consumers'
voices.

Thank you for your
kind attention.

Yours faithfully,
Raymond Wong

Subject: 我要清新空氣

☐ Urgent ☐ Return Receipt

18/03/2006 23:27

經濟發展及勞工局：

我只是在一間不起眼的九龍某社區醫院工作的一名內科醫生，我只想和你分享我望天打掛的心聲和故事。

我的醫生辦公室在十三樓，該層病房外的大堂玻璃窗，能讓人在一群高樓大廈的擠壓下看到丁點兒的維多利亞港。每天早上望天打掛已經成為我必定動作，如果我能夠看到港島的藍天，一座座建築物清晰地出現在我眼前，那麼我的心情必然大喜到「A H！」一聲叫了出來，整個人也讓充滿了力量；可是，若然我未能看到對岸，被煙霞所濃罩，即表示當天的空氣污染指數非常嚴重，便可以想像到因呼吸疾病入院的人次必然大增，想起這「天災人禍」（天是指空氣的清新度，人禍則是指人滿之禍），我的心不期然會似垂頭喪氣的天氣先生，發出無奈的「哦」聲。

為什麼一個醫生要對空氣的素質有如此的關注，不僅與我們的工作量有關係，也與整體市民的健康有關。而事實上，不少醫學研究已經證實空氣污染與心臟病、哮喘以及慢阻肺病的誘發有著莫大的關係，改善空氣質素與市民的健康有所關連。

發電廠作為香港空氣污染的一個主要來源，就著最近的《香港電力市場未來的發展》諮詢，容讓我這個局外人發表一些意見。為了保障市民的健康，我們有必要在能源產生的過程減少污染。這是電力公司的社會責任，而事實上，電力公司有責任盡其所能去減輕排污量，否則他們的準許回報率必須相應調低以作懲罰。電力公司亦應將一定的百份比投資放在可再生能源的研究和應用上。作為專利的公司，他們不可以在掙取我們金錢之餘又將污染排防在我們的天空之中。

我明白香港的空氣污染問題並非一朝一夕能夠解決，隨著珠三角的發展，我們有更多「國家因素」要考慮和處理。當著名權威醫學期刊《刺蝟針》於去年十一月十九日形容中國是「世界污染之都」的時候，可見老外們對我們華人的空氣污染問題已經到了不可再容忍的地步。香港作為泛珠三角當中的最先進城市，實在有責任去領導粵港兩地就此問題進行改革。如果我們還相信「香港好，中國好；中國好，香港更加好」的說話，我們就更應該相信「香港空氣好，中國形象好；中國空氣好，香港市民健康繁榮更加好」。當今天粵港兩地的電力供應將會聯網之際，香港政府實有必要制定政策，減少產生能源的過程所帶來的污染，長遠帶領珠三角，走向使用再生能源。

請為我們的病人能夠呼吸一口新鮮的空氣，也請讓我們香港市民有緣再見維港的晴空藍天。希望在今次的檢討，每年賺錢的電力公司能有更大的承擔。

感謝。

Subject: electricity regulatory reform

☐ Urgent ☐ Return Receipt

Dear Sir/Madam,

I am concerned of the government's latest proposal on the changes in the post-2008 regulatory regime of the electricity market.

As an international financial centre, a reliable electricity supply is unique for the functioning of the city. It is therefore, of utmost importance that adequate investment on the electricity network and power plants are made from time to time.

The proposal of the government poses great threat to the business risk of investors of the electricity sector, it does not only recommend a lower rate of investment, but also open the door for unlimited no. of potential entrants, this possibly, would have a strong discouraging effect on any substantial investment on the power generation industry, which is detrimental to the sustainable economic growth of Hong Kong.

I appreciate the government's effort in cutting the electricity bills of Hong Kong citizens, nevertheless, we shall be prudent in making any drastic changes, especially given the geographical and physical constraint of Hong Kong, it is apparent that introduction of new competitors in the territory in providing the electricity supply is a huge wasteful of manpower and resources, and possibly posing threat to the reliability of electricity supply in Hong Kong.

There has been massive concerns from the society and international world that the worsening air quality in Hong Kong in recent years, which is now a growing threat to Hong Kong's standing as an international financial centre and a desired place of living. In the new regulatory regime, stronger incentive shall be provided to investors to invest in the renewable or environmental-friendly power sources, while the polluted power plants shall be discouraged by a lower rate of return.

Finally, I wish the government to have thorough consultation among the public and various stakeholders before coming to any final decisions.

Yours sincerely,

Raymond Yiu

Subject: Stage II Consultation

☐ Urgent ☐ Return Receipt

I would like to offer my comment on the captioned subject as below:

Supply reliability is one of the key elements to Hong Kong's financial and commercial activities and quality of life. The tariff in HK is lower comparable to other metropolitan cities like New York, London & Tokyo, the balance between supply reliability and electricity cost should be carefully considered.

Introduced a new entrants or open the market may not be a best solution to customer and there are many examples in the country after deregulation, they had got the painful experience.

Instead of this, government or regulator can closely monitor for investments, operating costs and tariffs of the power companies in order to protect customers' interests.

The present mechanism is acceptable in view of the tariff only account for a very small portion of monthly household but we offered by a high quality power supply and customer services.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

23/03/2006 17:59

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

24/03/2006 11:22

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Rebecca Hickman

17 March 2006

Mr. Stephen Ip
Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Mr. Ip,

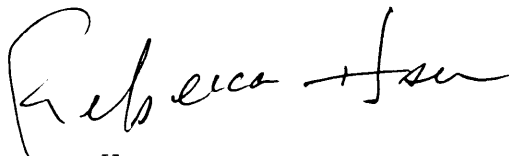

Stage 2 Public Consultation

The consultation paper correctly points out that fair and attractive return is pivotal to quality service by the power companies. But I understand that it also proposes to reduce the permitted rate of return for the power companies from 13.5 - 15% to 7 - 11%. I feel this proposal unjust. My queries are:

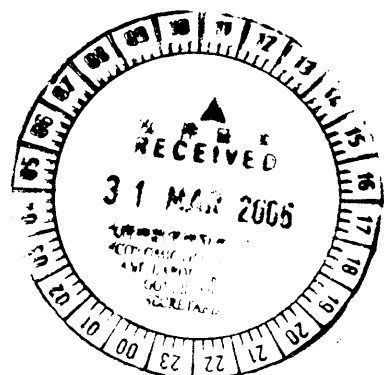

1. How can you determine the right rate of return when there is still 3 years to go? Are you sure that inflation rate and interest rate will not surge in the coming few years?
2. I have the gut feeling that the present return earned by the power companies are only reasonable if not low when compared to other businesses like property development. What is your justification to reduce the rate of return by more than 50% (from 15% to 7%)?

Please ensure that the permitted return granted to the power companies is reasonable to ensure that Hong Kong can continue receive good electricity service in the future.

Yours sincerely,

Rebecca Hsu

2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 我要清新空氣
☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Rebecca

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Rebecca

能源諮詢委員會

電力市場檢討：檢討管制計劃協議的安排

議題

檢討現行管制計劃協議安排，在應付本港電力需求方面的優點及缺點。

背景

2. 香港的電力供應由兩家私營的電力公司提供，即香港電燈有限公司（以下簡稱“港燈”）和中華電力有限公司（以下簡稱“中電”）。除了安全方面的規管外，兩家電力公司（以下簡稱“兩電”）亦須按管制計劃協議，接受財務方面的監管。

管制計劃協議的安排

3. 政府與兩電分別簽訂了管制計劃協議（以下簡稱“協議”）。協議列明兩電的權利和義務，但它並不是專營權，亦沒有提供專有權利。根據協議，兩電須要提供足夠的設施，以應付現時及日後的電力需求，並以合理的價格，提供安全可靠的電力供應。在政府方面，協議提供監管電力公司事務的架構，以保障消費者的利益。

4. 協議中包括 -

- (a) 一個議定的基礎，以訂定電力公司股東每年透過發電和供電所能賺取的准許利潤；
- (b) 要求電力公司須就其財政計劃的某些項目(包括預測電費水平)，取得行政會議的批准，而每年的電費亦需得到政府的同意；及
- (c) 訂明政府和電力公司須聯合審核電力公司每年的技術和財政表現。

5. 現行協議為期 15 年，將於 2008 年屆滿（中電的協議屆滿日期在 9 月 30 日，而港燈的則在 12 月 31 日）。協議訂明在 1997/98 年度及 2003 年度進行兩次中期檢討。在檢討期間，協議雙方均有權要求修訂協議的內容，惟任何修訂必須得到雙方同意方能生效。我們已完成了該兩次中期檢討。

現行規管架構的優點和缺點

(A) 優點

(a) 清晰及穩定的規管架構

6. 供電業是一個資本密集的行業，需要大量高成本而回本期極長的投資。協議提供一個為期 15 年的穩定規管架構，令投資者可以根據協議內清楚訂明的權利和義務，按需要而作出投資決定。在過去 20 年（即由 1983 年至 2002 年），兩電在供電設施方面作出龐大投資，以應付不斷增長的電力需求。

(b) 鼓勵投資以應付需求及維持穩定供電

7. 根據現行協議，兩電的准許利潤是按固定資產平均淨值來計算。這安排鼓勵電力公司在供電系統方面作出投資，以應付電力需求增長。在過去數十年，兩電不斷在發電和網絡設施上投資，以配合及支持因應香港經濟迅速發展的電力需求增長。消費者一直享用可靠性位於世界前列（可靠性超過 99.99%）的電力供應，而供電量不足的情況在本港幾乎是聞所未聞。

(c) 電力公司集資成本低

8. 協議有助兩電取得優越的信貸評級，增強它們以有利條件取得大型集資合約的能力。港燈和中電現時的信貸評級大致上與政府的相若，消費者亦因而受惠，因為集資成本會在電力公司所收取的電費中反映出來。

(d) 行政費用低

9. 政府就有關協議安排的事宜，只需作較高層次的整體監管。因此，兩電的日常運作，可按公司原則和商業考慮來進行。

10. 在世界上不少地方，有關當局都會對電力公司實施嚴密規管。例如英國和澳洲的領牌手續，及在美國部份地方相當費時的電費檢討過程。根據現行協議，兩電只須每年接受一次電費檢討及核數檢討，並定期進行一個包括為期最少 5 年的財政計劃檢討。因此，香港政府和本地電力公司的行政費用，相對外國為低。

(e) 穩定電費

11. 協議內有多個不同機制 (例如發展基金、燃料價條款帳)，提供緩衝以穩定電費。港燈能在 2003 年凍結電費，部份原因是由發展基金中轉撥了所需款項。而中電能在 2004 年凍結電費，部份原因是利用燃料價條款回扣。這些都是有關機制發揮作用的例子。

(B) 缺點

(a) 准許利潤的調整欠缺靈活性

12. 在現行協議下，兩電可獲取以其本港供電業務固定資產平均淨值 13.5% 計算的准許利潤，若固定資產的融資來自股東股本，准許利潤則另外可加上 1.5%。

13. 上述回報率在近年的經濟環境下，因被指過高而備受抨擊。現行協議於九十年代初簽訂，當時香港正經歷高通脹，亦面對主權移交，政治前景變得不明朗。因此，當年議定的准許回報率，可能反映了當時預測的營商環境，但這回報率在近年卻被指為過於慷慨。在 1997/98 年及 2003 年進行的中期檢討，政府都曾建議減低准許利潤，但兩電拒絕有關建議。由於任何對協議的修訂，必須經雙方同意才能生效，故此准許回報率仍維持在 1993 年的水平。

14. 將規管期縮短，也許能令准許回報率適時地反映當前及不斷改變的經濟環境。不過，增加檢討次數亦會加重行政負擔，並可能令電力公司覺得規管前景不明朗，因而影響其投資意欲。

15. 在進行中期檢討時，我們未能成功地引用外國規管供電服務的方法(即以表現為本的回報規管機制下常用的 CPI-X 方式)，將電費 (包括准許利潤和運作開支) 與經濟指標 (例如消費物價指數) 掛鉤。使用這方法必須先定下監察機制和表現指標，防止電力公司為了保持准許利潤而過份調整運作效率，以至危及供電的可靠性。

(b) 鼓勵過度投資

16. 根據現行協議，興建新設施等於增加資產基數，令電力公司可賺取准許利潤。這會被指為鼓勵電力公司興建一些不必要及 / 或不完全需要的設施。

17. 解決這個問題的其中一個方法，是將回報和公司資產「脫鉤」。例如可考慮利用表現為本回報規管機制，將公司的回報與其效率和表現目標掛鉤，又或者利用以股東資金 (即股本) 作為計算基數的股本回報率規管方式。不過，這些方式亦有其本身的限制。

(c) 消費者和電力公司的投資風險分擔不公平

18. 電力公司需興建新廠房和設備以應付預計的電力需求，但現有的回報機制並非直接與其資產的實際使用率和表現掛鉤。雖然政府及其顧問可根據現有協議嚴格審核電力公司的資本投資，但用電需求的實際增長未必如預期的一樣(由於未能預計的情況，例如經濟發展及 / 或用電模式改變等)，因此已投產的廠房和設備可能未必會充份使用。此外，雖然根據現行機制，兩電不能就「過剩」發電容量賺取全部回報¹，但消費者仍須透過電費支付所有其他費用 (例如折舊、運作費用)。加上有關機制不適用於網絡發展，因此投資的風險會被視為大部份都由消費者而非電力公司去承擔。

(d) 透明度不足

19. 市民普遍認為及猜測兩電過度投資及不合理地增加電費，主要是由於公眾未能獲得電力需求預測及系統發展計劃等資料，亦即被兩電視為商業敏感及機密的資料。

¹ 過剩發電容量的機電設備開支的40%，由固定資產平均淨值中扣除。在進行2003年的中期檢討時，港燈同意將扣減比率增至50%。

20. 在考慮商業機密及擁有權等因素下，我們可以透過公開更多資料及 / 或加強透明度，解決部份這方面的問題。

(e) 缺乏提高成本效益的機制

21. 現行協議並沒有設置誘因，以鼓勵電力公司提高運作效率及 / 或服務質素 -

- (a) 電力公司曾自發地推行措施，提高運作效率，例如削減人手，但這些措施與善用資產並無直接關連；以及
- (b) 在保持服務質素和供電穩定性方面，兩電主要集中於興建新廠房和設施 (因而增加資產基數)，而非推行系統改善措施，例如增加備用發電量分享、較具經濟效益的電力交換、增加固定電力購買量、制定綜合發電資源規劃等 (這些措施有可能令電費下降，使消費者得益)。

22. 為鼓勵兩電推行更進取的措施，可於價格規管機制中，加入財務誘因 (例如訂定條文容許電力公司保留部份所節省的费用等)。

(f) 缺乏特別規定方便第三者使用電網

23. 現行協議沒有特別規定電力公司必須讓第三者使用其電網。在簽署協議時，或時至今日，有關條文或許並沒有逼切需要。不過，對發展其他電源及讓新參與者加入電力市場而言，電網畢竟是一種障礙，而公平開放電網就是關鍵所在。

觀察要點

24. 以協議規管本港電力市場已差不多有 40 年歷史。這安排為本港消費者提供可靠及充足的電力供應，亦為兩電提供穩定清晰的規管環境，讓他們放心投資及運作，以履行對消費者應盡的義務。但有關安排並非全無缺點的，所以現有協議亦不時受到批評。

25. 在制定本港日後的供電市場規管架構時，必須進一步考慮如何在新的規管架構中，改善現行協議安排的缺點，並增強其優點。

徵詢意見

26. 請委員就管制計劃協議安排的優點及缺點及可行的改善方法發表意見，讓我們在擬備 2008 年後的規管架構方案時可作參考。

經濟發展及勞工局
2004 年 3 月

能源諮詢委員會

電力市場檢討：投資回報

議題

檢討釐定供電行業投資回報的各種方法，及考慮二零零八年後香港電力市場可供選擇的方案。

背景

2. 投資回報是投資者就其提供資本所需要或期望的補償，亦是他們因作出有關投資而放棄的機會成本。在受規管的電力市場，投資回報是受到規管的。在開放的電力市場，儘管電費很大程度上由市場決定，但由於輸配電網絡仍是自然壟斷的業務，所以電網的使用收費（以至其投資回報），仍然是受規管的。

3. 在受規管的電力市場以及在開放的市場內仍然受規管的業務，目標投資回報通常是以投資回報基數計算的准許回報率釐定的。電費與目標投資回報有著直接的關係，因為電費是電力公司的收入來源，一般包括目標投資回報及需收回的營運開支。鑒於此種關係，規管投資回報率及其基數，便成為平衡消費者付出合理電費及投資者得到公平及吸引的回報，以鼓勵其不斷投資來維持穩定而可靠供電的規管機制。這機制可以是傳統投資回報或稱為服務成本的規管機制，即透過一個限定的投資回報基數計算的合適投資回報率來規管電費，或是較為複雜的表現為本規管機制。除了規管電力公司的電費外，表現為本規管機制亦可加入誘因，以改善效率、服務水平和供電質素。在表現為本的規管機制下，焦點會由成本監察轉為生產力分析，以及將多項誘因，包括用以鼓勵電力公司達到指定目標的獎金計劃，或讓電力公司與消費者分享改善效率所帶來的利益等，應用於收費或收入上限之中。

投資回報率

4. 投資回報率可透過幾種方法釐定，包括一般方法、經濟方法和資金成本方法。一般方法考慮到需要在通脹上另外提供一些實質增長，以支持

在業務上的進一步投資。經濟方法則使用機會成本的概念，考慮到需要提供相對於其他投資可賺取的回報。資金成本方法是透過考慮無風險回報、股本風險報酬及有關公司的借貸溢價，有系統地分析有關公司的股本成本及借貸成本，用來釐定投資回報率。有關上述三種方法的詳細資料及其優點和缺點，現載於附件內。

5. 長期固定的投資回報率，在某些時候未必能適當地反映經濟環境的改變。例如，在高通脹時期，該固定回報率可能未必會為投資者所投入的資本提供足夠的回報。另一方面，當經濟不景時，該固定回報率可能會給予投資者過多的回報。因此，在考慮規管電力公司的投資回報率時，檢討回報率的機制是另一重要因素。

投資回報基數

6. 釐定投資回報基數的基本方法有兩種：資產基數方法和股本基數方法。

資產基數方法

7. 這方法以總固定淨資產為投資回報基數，回報因此與總資產值掛鉤（資產回報率）。總資產值可以按資產原成本扣除折舊後的數額，或以這些資產的重置成本扣除折舊後的數額計算。

8. 由於電力公司會有現金、應收賬款等，以應付其當前的債務，將這些營運資金¹包括在投資回報基數內亦是頗常見的。這樣總淨資產（即固定淨資產及營運資金的總和）便成為投資回報基數了。

9. 由於目標投資回報得到保證，資產回報率方法提供了持續資產投資的誘因。基於這種連帶關係，採用資產回報率方法來規管投資回報，意味著電力公司在新建和更換的資產上的資本開支亦要受到規管，以確保投資的恰當。

¹ 營運資金指流動資產扣除流動負債。流動資產包括應收賬款和銀行存款，而流動負債主要指應付賬款和銀行貸款。

股本基數方法

10. 股東資金（即股本）亦可作為另一種釐定准許回報的投資回報基數（股本回報率）。此方法通常的安排是找出類似受規管公用事業營運風險的公司樣本，並根據他們帳面盈利與股本賬面價值的比率，計算他們的股本回報率。然後，受規管公用事業的股本成本，可參考這些有類似營運風險的公司的股本回報率來釐定。然而，以香港的情況，可能很難找到營運風險相若或性質相同的公司，而任何選擇都可能會令到推算結果被視為粗略或武斷。

11. 採用股本作為投資回報基數的缺點，是缺乏誘因以達至有效率的融資，即受規管的電力公司可能會過份依賴股本融資，以致在利率偏低時，仍不去利用成本較低的資金，因此導致較高的電費。在受規管的電力市場，股本回報率方法，並沒有如資產回報率方法般受到普遍採用。

海外的情況

12. 在美國、英國和澳洲等地，以垂直一體化方式經營的電力公司，在供電行業內曾經是處於支配地位的，而他們的收費和服務都是受到規管的。今天，這些國家大多數的電力市場已經開放，在發電及銷售（批發或零售）方面都引入了競爭。電網，即輸配電網絡，由於其自然壟斷的特質，則仍然受到規管。

13. 在美國，大部份的規管機構，都是採用投資回報的規管機制，以規管包含了所有供電服務成本和適當回報的電費。他們通常採用資金成本方法來釐定投資回報率，亦通常採用資產基數方法來釐定投資回報基數，但亦有些規管機構選擇使用他們認為更合適的股本回報率方法。這些投資回報率並沒有固定的檢討期，當實際回報明顯偏離准許回報時，電力公司或規管機構均可提出進行檢討。

14. 英國和澳洲等地的規管機構，主要是採取表現為本的規管機制，電力公司可獲准保存部份從改善營運效率和生產力得來的利益（利潤）。要達到這個目標，規管機構會以類似投資回報規管機制所採用的方法，釐定首年的收費或收入目標（收費或收入上限）。這目標的釐定通常是採用資金成本方法來找出投資回報率，並以資產基數方法來找出投資回報基數。規管機構亦會建議一套誘因以鼓勵電力公司，按其成本底線降低開支，而所節省的開支會讓客戶和股東攤分。推行這種規管方式，取決於供電質素的規

管要求，以防止電力公司因節省開支，而犧牲供電系統可靠性和服務質素。

香港的情況

15. 香港的兩家電力公司，都是透過《管制計劃協議》（以下簡稱“協議”）規管的。在協議下的准許投資回報，基本上是一種資產回報率方法，以固定資產平均淨值計算固定投資回報率。現時，准許投資回報率以固定資產平均淨值的百分之十三點五來計算。若固定資產的融資來自股東資金，准許投資回報率則另外加上百分之一點五。

16. 在一九九七/九八年的中期檢討時，協議作出了修訂，以引入機制防止電力公司過度投資。當新增設備被認為是過剩時，其部份成本將從計算准許投資回報的固定資產平均淨值中扣除。

與海外市場比較

(I) 投資回報率

17. 香港擁有一個獨特的傳統電力市場，香港的電力公司是以垂直一體化方式經營並由投資者擁有，市場上亦沒有任何競爭。此外，相比其他已開放的海外電力市場，本地電力公司所受到的規管亦較少。

18. 在已研究的主要海外電力市場中，並沒有發現類似香港目前的安排。比較接近的只有美國某些州份的電力公司，現時仍然是以垂直一體化的方式經營並由投資者所擁有，而在零售市場上亦未引入競爭。

19. 因此，不能在同一基礎上準確地比較本港和外地電力公司的投資回報率。

(II) 供電可靠性、投資回報和電費之間的關係

20. 作為規劃準則基礎的供電可靠性目標，與所需資本投資的關係非常密切。這些目標可以由電力公司或監管機構所制定，亦可由雙方共同建立。一般而言，要達至高水平的供電可靠性目標，是需要在電力系統建設上作出更多的投資。

21. 在一個受規管的市場環境下，投資者可根據規管機制，就其投資賺取回報。在投資回報的規管機制下，目標回報會與資本投資（按資產或股本計算）成正比。在表現為本的規管機制下，目標回報亦會根據預計的資本投資而釐定，雖然實際的回報可能會隨電力公司的表現而有所分別。目標回報最終亦會反映在電費之上，因此供電可靠性目標、資本投資額、目標回報以及電費之間有著一定的關連。

22. 資本投資主要是由可靠性目標所推動的，而實際投資會視乎准許回報率的水平。若投資回報率偏低，所得到的投資回報自然不及其他業務吸引，因而影響電力公司的投資意欲。再者，為了滿足供電可靠性目標，而需要增添基建設施時，投資者在基建計劃融資上，可能會遇到困難或需要付出更高的利息。另一方面，若准許回報率過高，電力公司可能會因為回報吸引而增加投資，甚至超越所需的水平。因此，適當的規管和監察機制，對確保適度投資極為重要。

23. 在經已開放的電力市場中，普遍是由一個規劃機構，按既定的供電可靠性目標²，預測未來的電力資源是否足夠。在一般情況下，投資者會因應這些市場預測訊號，按他們所意識到的投資風險、市場的能源價格預測以及估計的投資回報等因素，作出投資決定。相比受規管的市場，這機制可能會較難確保有足夠的投資，以達致可靠的電力供應。再者，由於電費主要是由市場所定，電費（以及目標回報）與投資的關係亦相對較寬鬆。

24. 由於上述種種原因，加上發電燃料組合（傳統火力發電、水力發電、抽水蓄能和核電等）會影響發電成本，以至很大程度上影響電費水平；因此，並不能在同一基礎上，把不同地區的投資回報 / 電費與供電可靠性作準確比較。

可供香港考慮的方案

25. 可供考慮的投資回報方案如下：(I) 若香港電力市場的各部份繼續受到規管的話，規管範圍將包括整個供應鏈；或 (II) 若開放香港的電力市場，並在發電及 / 或電力銷售方面引入競爭的話，規管範圍將包括供應鏈餘下的部份（即輸配電網絡）。

² 這些供電可靠性目標，通常由一標準制定機構或市場規管機構，在取得大部份市場參與者的共識後而制定的。

(I) 受規管的電力市場

26. 政府及 / 或規管機構需要確保受規管的公用事業公司，能就其營運和所需投資提供融資，令這些公司能夠在現在及將來繼續提供可靠的供電。而公司的股東亦因此能賺取合理的回報，為持續投資提供誘因。

27. 如第 6 至 11 段所述，用以計算准許回報的投資回報基數，可以是受規管的資產或股東資金或股本。雖然資產基數方法似乎是較常用的方法，上述兩種方法亦似乎適用於香港。

28. 在釐定投資回報率方面，可考慮採用第 4 至 5 段和附件中所討論的不同方法，例如一般方法、經濟方法及資金成本方法。當中，資金成本方法似乎比較科學化，在釐定投資回報率時亦會較為客觀，並較容易提供有關資料以增加透明度。透過參考海外市場的准許回報率，亦有助建立適用於香港的回報率範圍，然後基於本地的情況(如經濟和社會特質)而作出適當調整。

29. 此外，可考慮在投資回報率規管機制上引入誘因，以鼓勵改善營運效率及服務表現。這種方式基本上是一種表現為本的規管機制。海外經驗顯示，表現為本規管機制 (如 CPI-X 機制)，主要應用於已開放的電力市場中受規管的服務及其他公用事業，而以垂直一體化方式經營的傳統電力市場則較少應用。原則上，表現為本規管機制是可以用來規管以垂直一體化方式經營的電力公司，包括其回報及電費，但有關經濟、供電可靠性和財務風險等問題必須妥善解決。此外，由於需要加強監管，行政負擔和規管方面的開支亦會相應增加。無論將來的規管機制如何，我們必須考慮訂立一個合適的檢討期。檢討期不應太長，以便政府可以因應經濟狀況而作出調整；亦不應太短，以鼓勵足夠的投資。

(II) 開放的電力市場

30. 開放電力市場的目的，是容許在自由市場的運作下，基於供求的主要情況來釐定電費。電力公司在這些面對市場競爭而不受規管的業務上所賺取的投資回報，將由市場來決定，並成為電費的一部份。

31. 即使要引入競爭，由於電網是自然壟斷的業務，所以很大機會仍需受到規管，因此要一個合適的機制，以繼續規管這些業務。在以上第 26 至 29 段所述的方案，亦可用作規管電網的投資回報。此外，這些方案亦可應用於其他受規管的部份，例如電力市場未完全開放時的零售部份。

徵詢意見

32. 根據本港的實際情況，例如兩電均為投資者所擁有，誠邀委員就二零零八年後如何釐定投資回報的課題及其可行方案發表意見。

經濟發展及勞工局
二零零三年六月

釐定投資回報率的方法

(A) 一般方法

這方法把投資回報率設定為一個可以抵消通脹，而又能提供實質增長，以支持進一步投資的回報率。當面對通脹時，投資者會期望從其投資中，獲得至少能保存其資本實質價值的回報，並且會尋求一定的實質資本增長，以擴展或改善其業務。而不同投資者心目中的實質增長率，都各有不同，視乎當時的投資氣候及投資者願意接受風險的程度而定。

2. 這方法雖然比較簡單及容易明白，但卻缺乏客觀性，亦不能反映個別公用事業的特點。

(B) 經濟方法

3. 這方法提出把投資回報率定為同等資本在類似投資下可賺取的回報，而其他相類似的公用事業的投資回報率亦可作為比較的標準。

4. 這方法同樣是簡單、易於明白及應用。可是，根據其他性質未必完全相同的公司的表現來釐定投資回報，可能會被批評為過於粗略及武斷。

(C) 資金成本方法

5. 資金成本是市場上資金提供者所要求的回報水平，而該回報水平必須能夠吸引他們為某一公司提供添置資產所需的資金。資本密集的公司通常透過借貸及股本來籌集資金，而市場對這兩類資本所要求的回報水平可能不同。資金成本方法提出投資回報率應等同加權平均資本成本，即股本成本和借貸成本的加權平均數。當回報率低於加權平均資本成本時，由於股東獲取的回報低於資金市場所需，因此該公司將無法吸引新的資金。資金成本方法雖然比較科學化，可是有些意見卻認為投資回報率一般是經談判或共同協議下預定的，因此是由回報率決定資金成本而不是由資金成本決定投資回報率。

6. 計算加權平均資本成本的方程式，以及估計其成份(即股本成本和借貸成本)的方法載於附錄內。

(A) 計算加權平均資本成本的方程式

加權平均資本成本 (除稅後) 的定義為:

$$\text{加權平均資本成本 WACC} = g \times (1 - T) \times r_d + (1 - g) \times r_e$$

其中：

| | | |
|-------|---|---------------------------|
| g | = | 資本與借貸的比率 = 借貸 / (借貸 + 股本) |
| r_d | = | 借貸成本 |
| r_e | = | 股本成本；及 |
| T | = | 公司稅稅率 |

股本成本以除稅後計算，而借貸成本則以稅前計算。加權平均資本成本的方程式，假設公司繳付的借貸利息，能以公司稅稅率獲得稅款的扣減。

(B) 估計股本成本

現行幾種估計股本成本的方法中，最廣為澳洲及英國規管機構採用的是資本價格模式 (簡稱 CAPM)。美國的規管機構亦開始傾向採用 CAPM 來估計股本成本。

資本價格模式

在資本價格模式下，公司股本回報率的定義為:

$$r_e = r_f + (r_m - r_f)$$

其中：

| | | |
|-------------|---|---|
| r_e | = | 股本成本 |
| r_f | = | 無風險回報率 |
| r_m | = | 市場回報率 |
| $r_m - r_f$ | = | 股本風險報酬: 根據以往經驗而估計出投資者預期的風險回報，即投資者在市場上可以獲取相對於以往無風險回報率的額外回報；及 |
| | = | 顯示該公司的回報，因應市場回報的改變而變動的指數 |

資本價格模式把不可分散的投資風險³，以及資產回報聯繫起來。一項投資不可分散的投資風險(即風險報酬)，取決於該投資的回報對整體市場變動的敏感度，這敏感度是以該項投資的β值量度的。一項投資的β值若等於 1.0 時，它的風險相等於市場的平均風險，而當β值少於 1.0 時，該項投資的風險則較市場的平均風險為低。

資本價格模式主要依靠過往數據來計算風險報酬(往後看的方法)，而選擇過往某一時段的數據作為計算之用，可能會被視為主觀的決定。

(C) 估計借貸成本

可以採用以下方程式估計借貸成本：

$$r_d = r_f + k$$

其中：

| | | |
|-------|---|-----------|
| r_d | = | 借貸成本 |
| r_f | = | 無風險回報率；及 |
| k | = | 個別公司的借貸溢價 |

個別公司的借貸溢價，取決於信貸評級機構根據該公司的財務特性，如市場價值、利潤穩定程度、及其特有的營商風險等因素，而給予的信貸評級。

³ 投資的經濟風險可分為兩部份：(i)「不可分散的投資風險」反映該項投資回報的波動幅度，是因應經濟和財務市場的整體變化(如通脹、戰爭、國際和政治事件等)及(ii)「可分散的投資風險」是由只影響該單一投資回報的事件引起，如工潮、訴訟及政府的規管行動等。「可分散的投資風險」可透過分散投資來消除。

能源諮詢委員會

電力市場檢討：電費

議題

檢討供電行業當前採用的不同電費結構和電費釐定過程，並考慮可供二零零八年後香港電力市場選擇的方案。

背景

2. 電費是電力公司的收入來源，一般包括公司的目標投資回報和所需收回的營運成本。在受規管的市場，電費釐定是受到監管的，亦通常是公眾的關注焦點。在開放的市場，電費很大程度上由市場決定，但電力供應鏈的某些環節的收費，如網絡服務等，也會受到規管。

電費成份

3. 無論在受規管的市場，還是開放的市場，電費一般包含以下幾個成份：

- 目標投資回報，
- 營運及維修支出，
- 折舊，
- 營運利息，
- 稅款，以及
- 發電業務上的燃料成本。

電費結構與釐定

(I) 外國慣例

(A) 電費結構

4. 電費結構形式多變，因地方而異，即使在同一國家中的不同市場也不盡相同。不過，一般來說可依據用戶類型予以劃分，例如就住宅與非住宅用戶，可能會有不同的電費計劃。

5. 以住宅用戶來說，可以提供一種不考慮用電時間及用電量的基本電費，即收費以每度用電為單位，例如新加坡所採用的方法；或是依據用電時間和用電量而相應改變電價，作為鼓勵善用和節約能源的方法，例如洛杉磯、三藩市、台北、首爾（漢城）和東京的電力公司，都會採用隨用電量增加而相應提高電價的方式，以鼓勵節約能源。此外，在倫敦、三藩市和悉尼的電力公司亦會實行分時段電費制度，對於非高峰期及週末用電，收費會相應調低，其目的是提高供電效率，從而讓電力公司減低所需安裝的發電容量。若要享用分時段電費，客戶便需要安裝一種特別的電錶，以便記錄不同時段的用電量。

6. 對非住宅用戶而言，不同國家會根據其國情，向不同類別的客戶（例如商業用戶、工業用戶或農業用戶）提供不同的電費計劃。在美國、英國和澳洲各大城市，對高用量的非住宅用戶，除收取電力費用外，還會有附加的高峰用電費，以鼓勵用戶將其在高峰時間的用電轉到其他時段。此外，對那些高用電量客戶，通常會提供較便宜的電費，以回報他們在提高負荷系數（平均電力需求量與最高需求量之比例）方面所作的貢獻。在紐約和三藩市，非住宅用電量在全年售電總量中所佔的比重較大，電力公司因此向此類用戶提供較低的電費。悉尼的情況卻剛好相反，因為其住宅用戶的比例較高。除了用電方式及用電量以外，一些電費計劃還考慮到特殊客戶的貢獻，例如農產品是泰國的主要收入來源，因此該國的農業客戶可繳交較低的電費。其他國家如新加坡等，高壓電用戶有電價優惠，因為電力公司為這些用戶提供設施方面的投資相對較低。

(B) 電費釐定過程

7. 外國不同市場的電費釐定過程各不相同，主要取決於市場性質是受規管還是開放、其開放程度以及規管機制和架構等。

8. 在受規管的電力市場，電費釐定的過程是由規管機構依據既定規管機制及架構來監管。例如在日本及美國一些州份，因電力市場尚未開放，電力公司須向規管機構提交詳細資料，以支持其建議的電費。這些資料會包括成本分析，供規管機構根據預定標準（包括回報率），對所建議的電費進行評估。而電力公司所提交的大部份資料，除被認為是商業機密的部份外，都會公開。根據有關機制的規定，或會舉行邀請電力公司出席的公眾聽證會，但聽證會中闡述的觀點不一定會反映在最終的電費上。

9. 在開放的電力市場，電費中關乎用電量的收費，大體上由市場決定。輸配電網絡服務則一般仍受規管，其收費的釐定與上述受規管市場的電費釐定過程相類似。

10. 有關美國、英國及澳洲電費結構與釐定過程的簡述，請參閱附件。

(II) 香港的情況

(A) 電費結構

11. 香港的兩家電力公司，對住宅用戶提供用電量越大，價格越高的電費結構，以鼓勵善用和節約能源。對一般非住宅用戶，中電實施分為兩個階段的電費遞減結構，而港燈則推行分為兩個階段的電費遞增結構。對高用電量或高負荷的非住宅用戶，兩家電力公司都提供包括耗電費和負荷費，並分為兩個階段的電費遞減結構。中電亦向這類用戶提供非高峰期和高峰期兩種收費，以調低非高峰期的電費，鼓勵他們在非高峰期用電。

(B) 電費釐定過程

12. 按《管制計劃協議》規定，每年的電費釐定過程分為兩個步驟。首先，政府每隔四至五年會與兩家電力公司進行財務檢討，就兩家電力公司制定的財務計劃達成協議。而在財務計劃中，將包括在檢討週期內每年的預測基本電費。

13. 然後，政府在每年十月和十一月分別與中電和港燈進行電費檢討，並根據最新的財務資料來釐定下一年度的基本電費。為此，兩家電力公司會向政府提供所有必需的財務資料及預測（包括銷售預測、資本及營運支出）。兩家電力公司不需向公眾透露與電費釐定相關的詳細財務資料及預測，但多年來電力公司都會向能源諮詢委員會和立法會經濟事務委員會匯報他們建議的電費調整。

14. 如果最終釐定的電費，沒有超出財務檢討時所批准的預測基本電費的百分之七，電力公司便可以推行新價格，而不必再向政府申請批准。

可供香港選擇的方案

(A) 電費結構

(i) 維持現有電費結構

15. 現有電費結構相對簡單。向不同用戶提供不同的電費，是兩家電力公司的商業決定，不需接受政府的審查。

(ii) 劃一電費

16. 電費釐定中一個簡單而直接的方法，就是對各用戶（包括住宅及非住宅用戶）實施劃一電費。這方法適用於全年及每天用電量變動很小的市場，對所有用戶都比較公平，但其缺點在於對某些全年及每天的負荷系數變動較大的地區（如香港），如果非高峰用戶所付的電費與導致需要更高發電容量的高峰用戶一樣，互相補貼的情況便無可避免。而且，這方法也不利於節約能源。

(iii) 分時電費

17. 此外，亦可採用分時電費制度，以鼓勵用戶在非高峰期用電。從長遠來說，這將有助於推延投資新發電設施的時間，從而降低發電成本。要實行分時收費制度，用戶必須安裝一種可按不同時段記錄用電量的分時計電電錶，而這種電錶價錢較高（價格在 100 至 280 美元之間，較傳統電錶的 25 至 30 美元為高）。若要令這種收費計劃發揮效用，非高峰期的電費必須大幅低於高峰期的電費。

(iv) 用電量折扣

18. 當發電機在滿載或接近滿載運轉時，發電成本通常會降低。同樣地，購買大量電力以供應用戶所支付的費用一般也較低。在滿載運轉及大量購電折扣所帶來的節省，都有利於大量用電的用戶。但這種提供誘因予高用電量用戶的方案，可能會與提倡善用和節約能源以減低安裝發電容量的方向背道而馳。

(B) 電費釐定過程（僅適用於受規管的部份）

(i) 維持現狀，每年與政府進行電費檢討

19. 現行的電費檢討，過程簡單，易管理，行政成本低，並只需時一至兩個月。但其過程透明度不高，而且不能反映消費者的意見。

(ii) 每年與政府進行電費檢討並公開相關資料

20. 公開電費檢討過程中電力公司提供給政府的資料，可以提高透明度。雖然公眾可就這些資料發表意見，不過除非他們的意見能真實地反映在最後的電費上，否則他們可能仍不滿意。此外，公眾也可能會覺得無法全面參與整個檢討過程及影響最終電費的釐定。由於須在釐定最終電費時徵詢和考慮公眾意見，這檢討過程相比現行電費釐定過程需要較長時間。此外，由於香港兩家電力公司都是上市公司，為投資者所擁有，在向公眾提供某些商業敏感資料方面，可能會遇到困難。

(iii) 年度電費檢討連公眾聽證會

21. 首先，需由電力公司、規管當局和公眾代表組成一個檢討小組。這方式可為有關各方提供一個機會，就相關問題及電力公司提供的成本數據與資料，發表意見及展開討論。為了應付檢討小組無法達成一致意見的情況，需要制定一個決議程序。這程序可能會較為複雜，而執行時必須非常謹慎，以求在公眾的參與和電力公司要求業務保密之間取得平衡。

(iv) 較頻密的電費釐定過程

22. 因應經濟環境的轉變，以及燃料市場價格的波動，可考慮採取較頻密的電費檢討過程，例如在新加坡一年進行兩次甚至每季度進行一次的釐定過程。這種過程的缺點是，電力公司與規管當局的行政負擔將大大增加。另一改進方法是在電費中加入可體現經濟表現與燃料價格波動的部份。然而，這部份的電費仍需進行經常性檢討，以確保其恰當性。

觀察要點

23. 不同的電費結構，可以影響用電方式以至電力供應設施的使用率，在某些情況下，甚至可以延遲投資，最終令電費降低。儘管降低電費是電費釐定過程的一個目標，但供電的可靠程度不應因此而受到影響。

24. 電力公司發佈相關資料，可提高電費釐定過程的透明度。不過，某些資料的市場敏感度較高，可能不適宜公開，特別是在引進市場競爭的情況下。

徵詢意見

25. 誠邀委員就香港的情況，提供有關電費結構及電費釐定過程的意見。

經濟發展及勞工局
二零零二年十月

美國、英國及澳洲的電費概況

美國

在美國，許多州份在很大程度上已經開放其電力批發市場，其中某些電力市場更是覆蓋幾個州份，例如東北部地區的 PJM¹ 市場。在自由競爭的批發市場，發電的費用由市場決定而不受任何規管。不過，輸電服務仍受規管，電力公司須將輸電網絡收費資料，提交聯邦能源管理委員會備案。該委員會負責管理跨州的電力交易。根據聯邦能源管理委員會規定，同時擁有發電及輸電設施的電力公司，必須為這兩類業務分別設立獨立帳目。

2. 電力零售市場由州政府管理。各州份的公用事業/服務委員會，負責管理網絡收費以及配電與零售市場的電費。某些州份的電力零售市場已經開放，一般用戶可以自由選擇電力供應商。法律規定，電力公司必須將零售業務與配電網絡業務分開。電費一般包括受規管部份（網絡服務）以及非受規管部份（發電及零售供應）。

3. 在一般情況下，電力公司會針對不同用戶種類或用電方式，推行不同的電費形式。就住宅用戶而言，除依據實際用電度數而計算的一般電費之外，還可選擇分時電費。有些電力公司，如加州「太平洋燃氣與電力公司」實行季節電費制度，夏季（高峰期）的電費會高於冬季。亦有些公司為低收入用戶提供特別電費計劃，如「太平洋燃氣與電力公司」的“CARE”計劃。此外，對商業、工業及農業用戶，亦會提供非住宅電費計劃。要具備參加非住宅電費計劃的資格，必須在電力需求和用電量方面，超過住宅用戶的一般用電水平。非高峰期的較低電價，亦會提供給非住宅用戶，作為鼓勵其在非高峰期用電的誘因。

4. 作為電費釐定過程的一部份，受管制的電力公司須向規管機構提交詳細的成本與收費報告，以支持其電費申請。除電力公司認為屬

¹ PJM 是一個聯營批發場。其成員涵蓋了美國東北部地區包括賓夕法尼亞州、新澤西州及馬里蘭州等幾個州份。

機密²的部份資料外，這些在規管機構備案的資料，通常可向公眾公開。電費申請一般需要通過一套公開的規管程序後才會獲得批准，以確保整個過程的透明度。電費釐定次數因應提交申請的時間而有所不同。儘管資料公開的規定不盡相同，傳統上，美國各電力公司一般都會自願發佈相關資料，以增強投資者和公眾的信任程度。

英國

5. 在八十年代末的電力改革中，英國供電行業進行了資產擁有權的垂直分割，並將分割後的各個實體進行私有化。一個以電力聯營體形式經營的強制性批發市場隨之而成立，在發電部份引進競爭，但仍對輸電網絡實行規管。在九十年代末，英國重新檢討以聯營體形式經營的批發市場，並於二零零一年開始由新的電力交易協定所取代。

6. 在零售領域，共成立了十二家地區電力公司。這些公司需要將配電網絡業務與零售供電業務分開。零售電力市場並分期進行開放，現在所有零售用戶都可自由選擇電力供應商。

7. 在收費方面，對住宅用戶提供兩類主要電費計劃，包括 " Standard Domestic Tariff " 與 " Domestic Economy 7 Tariff "。前者按統一價格收取日常電費，後者則分時收取電費，於非高峰期用電更可享受低價優惠。要享用分時電費計劃，用戶需安裝特別的電錶（名為 Economy 7 Meters）。非住宅電費更具競爭性，因為是根據工商業用戶的用電負荷特性及用電量等而設定。此外，亦有提供分時電費和季節性電費計劃，給非住宅用戶選擇，以鼓勵其在非高峰期用電。某些公用事業公司兼營電力與燃氣供應，如果用戶在燃氣和電力供應選擇同一供應商，便可獲得折扣。例如 London Electricity 就推出了 " Premier Dual Fuel Tariff "。

8. 開放的電力批發市場，價格由競爭釐定，因而在發電的環節沒有價格管制。接受規管的輸配電網絡業務，收費釐定週期約為三至五年。而收費的重新釐定，會考慮公用事業在檢討週期內的表現。

² 對於何種資料屬機密，並無清楚的定義。一般來說，公用事業認為客戶資料、燃料成本、資產價值等屬於機密資料。

9. 電力公司須向規管機構提供經營牌照內規定的具體資料。輸配電公司須根據規管機構提供的格式，準備有關接駁電網及網絡使用等方面的收費報告。不過，電力公司不需向公眾公開其電力成本及定價項目分類。

澳洲

10. 澳洲於一九九四年首次在維多利亞省實施電力批發競爭制度，其後批發市場逐步延伸到其他省份，進而形成了國家電力市場，並於一九九八年開始營運。國家電力市場通過在電力網絡互聯的成員省份內，實行發電公司競投方式，以聯營體形式經營強制性的電力交易。這些省份的電力公司，在業務方面實行垂直分割，而其中某些業務已經私有化。雖然在發電部份引入競爭，但網絡收費一般仍受規管。澳洲競爭與消費者公署負責管理跨省輸電網絡收費。

11. 澳洲已經在各省份分期實施電力零售市場競爭，目標是所有零售用戶最終能自由選擇電力供應商。各省的規管機構強制分拆電力零售與配電網絡業務，以確保公平競爭。配電網絡收費則受各省的規管機構監管。

12. 各省的電力零售商都向用戶提供多種收費計劃，許多供應商並提供分時電費，例如悉尼的 EnergyAustralia 推出的 "Controlled Load Tariff"，以及墨爾本的 CitiPower 推出的 "WINNER Tariff" 等。要享用分時電費，用戶須安裝特制電錶，並負擔電錶的更換費。當用戶願意支付一定的額外電費時，某些供電商還向用戶提供選擇，由可再生能源提供部份用電，如 CitiPower 推出的 "EcoPower Tariff" 以及 EnergyAustralia 的 "Pure Energy Tariff" 等。

13. 發電的費用一般由市場決定，而輸配電網絡收費檢討週期為五年。受規管的公用事業在向規管機構申請批准其網絡收費時，須提交詳盡的財務資料。各省規管機構並執行嚴格用戶資料的法例，要求各電力公司在電費單中，將輸配電收費與電力供應收費清楚區分。

能源諮詢委員會

電力市場檢討：資產所有權和成本回收

議題

檢討電力供應行業管理**資產所有權**和**成本回收**的各種做法，並對香港電力市場發展的可行方案作出考慮。

背景

2. 電力供應行業需要大規模的投資，以提供可以確保消費者能夠得到安全及可靠電力供應的基礎設施。與其他許多行業一樣，電力供應行業的投資者都期望能通過收取電費，得到投資回報，並收回營運成本。傳統上，供電行業是由垂直一體化的公用事業公司支配，整個「供應鏈」（發電、輸電和配電）的資產都是由一家商業機構所擁有。近年來，隨著部份電力市場開始進行改革，供應鏈的不同環節可能會由不同的商業機構所擁有。而這些公司在評估商業風險及預期的市場佔有率和收入後，會考慮採用不同的方法和機制，在不同的規管架構下，取得最大的投資回報，並且收回營運成本。

資產所有權

3. **資產所有權**有三種形式：

- (i) 垂直一體化：即供應鏈中的所有資產由同一間公司所擁有；
- (ii) 垂直分割：即供應鏈中不同環節的資產分屬不同公司；
- (iii) 水平分割：即在供應鏈中的不同環節各有多間公司擁有不同資產。

垂直一體化形式的資產所有權形式，常見於傳統的電力市場，及有限度競爭的發電市場。其他兩種資產所有權形式，則常見於已引入批發和零售競爭的市場。

4. 各種資產所有權形式亦可能衍生變化，如在垂直一體化形式下，分拆

賬目及 / 或營運部門，又或在同一控股公司下分設附屬公司等。進一步的變化形式還可包括將管理及 / 或營運職責，與資產的擁有權分開等。

(I) 外國慣例

5. 垂直一體化的資產所有權形式，現應用於如法國和一些亞洲國家的受規管市場，而在英國、美國和澳洲的供電行業未開放之前，也會採用這種形式。但當這些國家的供電行業進行改革後，便逐漸將資產所有權進行分拆。在引進競爭的同時，美國的一些州份亦有保留垂直一體化資產所有權形式，只需分拆其賬目及 / 或營運功能。這些國家的經驗總結在附件一。

(II) 香港慣例

6. 在香港，中電和港燈是垂直一體化的公用事業公司，他們分別是於香港交易所上市的兩家控股公司的附屬公司。

- (i) 中電擁有輸電和配電資產。而發電資產則由中電和埃克森美孚分別持有百分之四十和百分之六十股份的青山發電公司擁有。中電負責營運青山發電公司，並且是其電力輸出的唯一客戶。
- (ii) 港燈擁有發電、輸電和配電的所有資產。

以下是未來電力市場的一些不同方案，以供討論。

(III) 不同的方案

(A) 垂直一體化形式的資產所有權：保持現狀

7. 每家垂直一體化的電力公司，都擁有並營運所有向顧客供應電力所需的資產。這方案也適用於一些不同的市場管理模式，例如加強協調或聯合規劃（詳見《規劃準則與可靠性標準》一文）。

8. 在這方案之下，不會有太多的額外成本。然而如果這些資產屬於不同的擁有者，便需要額外成本來建立所需的管理架構。這方案的缺點是可能會妨礙新的參與者進入市場，因為除了其他因素外，進入市場的成本，包括發

電、輸電和配電設施的資本投資，將會相當龐大。

(B) 分割資產所有權

(a) 垂直分割

9. 在這方案下：

- (i) 發電資產和輸配電資產，分別屬於兩家不同的公司；或
- (ii) 供應鏈的每個環節，即發電、輸電和配電，分別屬於不同的公司。

10. 當發電資產的所有權與供應鏈的其他資產的所有權分開時，新的供應商（通常以獨立電力生產商的形式出現）將進入市場，有利促進發電業務的競爭。如將供應鏈的每個環節，分別由不同的公司擁有，便可以把競爭延伸到批發及／或零售層面的電力採購環節。

11. 但分割資產所有權的同時，亦會帶來：

- (i) 設立新公司的成本；
- (ii) 建立有關的管理架構，以及發電公司使用電網的管理程序，所需要的成本。因為分割資產後，這些運作便不可透過公司內部的安排進行；
- (iii) 於市場環境發生改變時，低效率或剩餘資產的擱淺成本（stranded cost）（見“成本回收”部份第13-19段）；
- (iv) 由不同的公司分擔確保可靠電力供應的責任，而因為責任劃分不當和協調不夠，可能會對供電可靠性帶來潛在的不利影響。

(b) 水平分割

12. 這方案是垂直分割後的更複雜形式，發電和零售環節內的資產，各由

幾家不同的公司所擁有，因而產生更多的市場參與者。但由於重複裝設輸配電網絡（即電網）的成本極高並且存在實質限制，因此要由多家公司擁有輸配電資產的所有權並不切實際。基於電網的關鍵角色及其所有權的自然壟斷性，有需要為此建立安排，設法在平等的基礎上，提供電網使用權，以確保市場的健康運作。但如需採用這種方案，便要考慮可能對私人產業權的侵擾。

成本回收

13. 供電行業的**成本回收**，一般是指電力公司取得投資回報及收回其營運成本的機制。對於一家提供一體化業務的電力公司而言，成本回收相對比較簡單，因為取得投資回報及收回營運成本通常都是透過收取電費。當電力市場引入競爭時，一些電力公司可能不得不處理低效率或剩餘的設備（即**擱淺資產**），並尋找方法來收回其中的**擱淺成本**。附件二總結了在不同的競爭市場結構下，不能從電力銷售收回的擱淺成本的影響。

(I) 外國慣例

14. 世界各地的市場結構形式，視乎其改革的進度而有所不同，既有完全受規管的市場，也有部份或全部開放的市場。在垂直一體化電力公司仍是唯一電力供應商的受規管市場，投資回報和營運成本回收，都是透過規管電費的方式進行。在開放的市場，供電行業的一些環節可能仍受規管，但其他的環節則是開放競爭的。在一般情況下，輸配電網絡會繼續受到規管，所以相關的投資和營運成本，將通過規管收費來回收。發電和零售環節則不再受到規管，這些業務的成本回收，將很大程度上由市場主導。當開放市場導致擱淺資產時，便可能需要採取如附件三的例子所顯示的類似機制來收回擱淺成本。

(II) 香港慣例

15. 在香港，中電和港燈兩家電力公司，都是透過各自與政府簽訂的《管制計劃協議》來規管的，並按照《管制計劃協議》的規定，通過收取電費來取得投資回報及收回營運成本。

(III) 收回擱淺成本的可能方案

16. 如不同的規管體制下兩家電力公司產生擱淺資產，可以考慮以下處理方案：

(A) 由電力公司承擔

17. 這方案可能祇屬理論，而難以付諸實踐。作為商業營運者，電力公司有可能將所有擱淺成本都通過在電費上轉嫁給消費者。為保障消費者利益，規管機制需要處理這方面的問題。

(B) 徵收附加費

18. 這方案需要在電費之外，明確地列出為收回擱淺成本而設的收費。徵收附加費的普遍例子，包括顧客退出費、新顧客的進入費，又或如美國一些州份所採用，通常被稱為競爭過渡費的附加費，以每度電為單位收取。競爭過渡費是一種按顧客用電量而收取的收費，所有顧客（無論是否享受電力公司的綜合供電服務）都必須繳納。選擇使用另一家供應商的顧客，仍需向現時為其供電的電力公司繳納競爭過渡費。徵收附加費方式的好處，是這項收費在電費單上獨立列明，容易監控。但是這種方法需要建立一個合理的附加費機制，公平合理地收回擱淺成本，並需詳細分析及評估市場的競爭及潛在的擱淺投資。

(C) 由公帑支付

19. 當電力供應的投資由政府引發，而剩餘資產是由於政府的行動所引致時，電力公司可能會要求以公帑支付他們的擱淺成本。這方案的可取之處和合理性，必須結合相關的政府能源政策、財政政策、法律影響和經濟觀點來謹慎考慮。而這方案對於香港的情況來說，似乎不太可行。

觀察要點

20. 由於香港現有的電力公司為投資者所擁有，以改變資產所有權來推動市場的競爭是一項挑戰，並可能使政府面對索償的風險。

21. 不管是以收取電費形式，還是以附加費的形式，開放電力市場可能會使消費者面對負擔擱淺成本的問題。雖然公眾普遍希望引入更多競爭以減低電費，但電費可能會因擱淺成本的因素而增加，特別是在剛引入競爭的最初幾年。另一方面，為了取得競爭優勢，發電公司或不會把全部擱淺成本都轉嫁給消費者，這樣消費者便可能會因供應商增加而導致的電費下降中獲益。

徵詢意見

22. 誠邀各委員考慮香港的情況，即兩家電力公司都是由投資者所擁有，就上述議題和方案提出意見。

經濟發展及勞工局
二零零二年九月

外國資產所有權方面的經驗

澳洲

在澳洲電力市場重組之前，電力供應主要是由垂直一體化的國營公用事業公司支配。這些公司擁有並營運發電、輸電和配電資產，向其服務地區內的用戶提供電力。這種資產所有權模式，從傳統受規管電力市場，轉向開放電力市場的過程中開始轉變，發電、輸電、配電和零售公司相繼出現。在新南威爾斯、維多利亞、昆士蘭和南澳各省份的國營發電資產，被水平分割成多家發電公司，為全國電力市場創造了更多的參與者，其中一些公司更實行了私有化計劃。各省份的法例並要求電力公司分隔其配電和零售業務¹。

英國

2. 在英國供電行業重組之前，英格蘭和威爾斯的發電和輸電資產，為政府公用事業公司 Central Electricity Generating Board (中央發電局) 所擁有和控制，而配電和零售資產，則由十二家區域電力局所擁有和管理。供電行業重組是於二十世紀八十年代後期，隨著國營企業私有化的進程，以及發電、輸電資產所有權的分割而開始的。首先，擁有和營運輸電網絡的國家電網公司 (National Grid Company) 成立。傳統的發電資產也從中央發電局分拆出來，再被進一步水平分割為兩家公司：PowerGen 和 National Power，而核能發電資產則被合組為一家名為 Nuclear Electric 的公司。在配電和零售業務方面，亦成立了十二家地區供電公司，取代之前的十二個地區電力局，並實行了私有化計劃，發電資產被進一步轉售予其他公司。

¹ 許多配電公司也經營零售業務。由於配電業務是自然壟斷的，而零售業務是開放競爭的，配電公司必須分隔這兩種業務（即在財務和功能上分開經營），以便在零售市場放開後，可以開放配電網絡，讓第三者公平地使用。

美國

3. 在美國，大多數公用事業公司為投資者所擁有，其中很多是上市公司。在電力市場開放之前，供電行業是由垂直一體化電力公司支配的。這些公司擁有並營運發電、輸電和配電設施，以提供電力供應。在二十世紀九十年代中期，Federal Energy Regulatory Commission (聯邦能源管理委員會) 規定這些公用事業公司，須允許第三者使用其輸電網絡。儘管這些公用事業公司仍然保留資產的所有權，但政府要求他們為其發電和網絡業務分別設立賬目，以確保公平地開放電網。在美國的一些州份，電力市場已經發展到電力批發市場在採購環節上的競爭，並且要求公用事業公司轉售其發電資產，以促進市場的公平競爭。

對金融市場的影響

4. 在澳洲和英國，在電力市場改革時，資產分拆對電力公司股價和金融地位的影響並不很嚴重。這是因為這兩個國家的電力公司當時是由政府所擁有，還沒有完全私有化。

5. 在美國，例證顯示功能性分拆對相關電力公司的股票表現和估價的影響很小。然而，從信用評級的角度來看，從母公司分拆而成立的發電公司，其信用評級可能較母公司為低，因為公眾普遍認為處於競爭市場中的發電業務，比輸配電業務要承擔更大的風險。但這也視乎個別發電公司的財務狀況等其他因素而定。

不同競爭市場結構下擱淺成本的影響

擱淺成本的影響可能隨競爭市場結構的不同而有所分別，這些競爭市場結構包括：

(a) 發電環節的競爭

在這競爭模式下，輸電和配電業務繼續受到規管。這些行業的投資和營運成本，可以通過受規管的收費收回。但發電資產通常以分拆會計賬目或成立獨立發電公司的方式，與原有的電力公司分開。其他新的發電公司（通常以獨立電力生產商的形式）亦可進入市場，與這些現有電力公司的發電業務競爭。但現有電力公司仍需承擔為其客戶供電，及為他們採購電力的責任。所有的發電公司（無論新的或現有的），都要爭取與電力採購者達成長期購電合約及短期電力平衡合約。在競爭的環境下，部份現有的發電資產可能變得不合乎經濟效益，而相關的發電業務因而不能獲得足夠的收入（因電費由競爭決定），使投資成本難以收回等情況。儘管這個競爭模式可推動發電投資者多元化，促使電費下降，但擱淺成本將會被轉嫁到消費者身上，故此有需要建立一個擱淺成本回收機制。這將會增加規管及監察工作的行政負擔和市場的複雜性。

(b) 批發市場的競爭

在這競爭模式下，將由多個批發採購商爭取購買市場上所有發電公司生產的電力。預計會有更多新發電公司因應市場的訊號而進入市場，而對於新發電公司的數量不會有任何限制。跟上述模式(a)比較，現有電力公司的發電業務將面臨更激烈的競爭和更多的擱淺成本，同時亦需要建立一個擱淺成本回收機制，上述有關模式(a)所有的優點和缺點，也適用於這模式。

(c) 批發和零售市場的競爭

在這模式下，消費者可以自由地從任何發電商，或可以為他們作供電安排的公司購電。零售業務將進一步從現有的電力公司分割出來，與進入市場的其他新零售商競爭。這將進一步增加電力公司的擱淺成本，因為與零售業務相關的一些投資，例如客戶服務中心等，可能變得不合乎經濟效益，而其收入亦未必足以收回零售業務競爭之前的成本。因此，需要建立一個更加複雜的擱淺成本回收機制，這將增加消費者的支出，也將增加行政負擔，並進一步增加市場的複雜性。

美國的擱淺成本估算和回收

在電力市場開放競爭後，由投資者所擁有的電力公司，因向其顧客供電所需的合法、謹慎和可證實成本，都可以在收回擱淺成本時加以考慮。在美國的許多州份，電力公司只有在採取了適當的緩解措施（例如減少資本支出、出售發電資產和加速折舊），來減少過渡期內擱淺成本的影響後，才會獲得允許收回擱淺成本。在引入競爭後，電力公司必須先實施積極的計劃，來減少擱淺成本的潛在風險，然後才能把收回擱淺成本的責任轉嫁給消費者。延遲啟動零售競爭，是減少擱淺成本的另一方案。

2. 擱淺成本的估算，一般有兩種方法，即行政方法和市場估價方法：

(a) 行政方法

這種方法的目標，是透過分析技巧（包括在現有規管原則下預測和模擬未來所需的收入，並將此結果與競爭市場中的預期收入相比較）計算擱淺成本。

(b) 市場估價方法

這種方法是通過銷售、拍賣或轉售有關資產，以決定資產的市場價值，並將得到的市場價值與這些資產的固有成本²相比較，來計算擱淺成本。如果市場價值小於固有成本，其差價就代表擱淺成本，反之，則是擱淺收益。

3. 擱淺成本的多小取決於競爭市場的情況，例如未來的市場價格，因而增加了估算擱淺成本的可變性和風險。由於在試圖量化擱淺成本的過程中，有大量不明確的因素，擱淺成本的計算可能會受到不同結

² 該成本是用以計算公用事業公司，在現在和過去為提供「綜合」供電服務，而向消費者收取電費的基礎。

果的影響。由於這些不明確因素的存在，故此應對計算結果進行週期性覆查，以確保能公平、精確地回收擱淺成本。然而，這將帶來額外的行政負擔，而降低公用事業公司對減少擱淺成本的積極性。

4. 在美國各州份，收回擱淺成本的機制有所不同。一些州份將擱淺成本的回收費包括在「綜合」供電收費內，其他州份則收取如顧客退出費、進入費或稱為競爭過渡費等的附加費。擱淺成本證券化也是財務上管理擱淺成本回收的普遍方法，主要通過發行債券為擱淺成本籌措資金。為發行債券作擔保，通常需透過執行有關法例允許公用事業公司將未來的一系列收入，作為他們的抵押財產。公用事業公司亦可向顧客收取固定的回收費，以取得足夠的收入來償還債券。

能源諮詢委員會

電力市場檢討：供電責任與供應源

議題

檢討分配供電責任與利用其他電力供應源方面的做法，並考慮適用於香港電力市場發展各種方案。

背景

2. 可靠的電力供應，在很大程度上取決於是否已清楚界定哪些機構負有服務客戶的責任，並有權分配所有的電力供應源。供電責任是指在任何情況下都向用戶提供電力的最終責任。供應源是指所有可供運用以滿足市場需求的電力源。

供電責任

3. 在傳統的規管環境中，一些垂直一體化形式經營的電力公司，是有責任供電給其區內的用戶。這責任包括：規劃並建設發電及網絡設施，連接電力供應源，並向所有用戶供電。負有這種責任的公司，可與規管機構協商以獲取一定的回報。隨著外國電力市場的改革，許多垂直一體化形式經營的電力公司，都會被分割成獨立的發電、輸電、配電及零售公司。因此，供電責任的概念，也相應起了變化。

(1) 外國慣例

4. 迄今，許多經濟體系（包括大多數發達經濟體系）的電力供應都是由政府管理，而且有關的供電設施亦是政府擁有的。一些國家自從進行改革後，對電力市場進行公司化或私有化以配合引入競爭。通過改革，服務責任已被分開，並分配給多個不同的公司（詳情參閱附件一）。

5. 某些經濟體系只在發電環節引入競爭，也有些經濟體系將競爭擴

展至發電和購電（批發及／或零售層面）兩個環節。於是，服務責任在各個環節，也相應分割成以下幾個部份：

- (a) **發電設施建設責任**，轉為市場主導及取決於投資者的商業目標及策略。
- (b) **發電規劃責任**，變成一種評估活動，由電網擁有者或獨立的規劃者來進行，預測供電源是否充足，並提供足夠信息予市場參與者計劃投資，以滿足未來發展需求。
- (c) **建設輸電與配電設施**，及將電力供應源連接到客戶的責任，仍由網絡擁有者承擔¹；
- (d) **供應滿足市場電力需求的責任**，由市場代理商承擔。代理商可以是電網擁有者或獨立系統營運商，負責提供足夠的電力，以滿足預測的負載需求，並提供足夠的發電量與網絡資源，在確保網絡穩定的情況下，保持供求平衡。
- (e) **向用戶輸送電力的責任**，由配電公司負責，並在部份零售商未能向用戶提供合約要求的電量時，提供備用電力。

(II) 香港概況

6. 在香港，中電和港燈都是垂直一體化的公用事業公司，分別擁有並營運發電、輸電與配電設施。兩家電力公司有責任為各自服務區內的用戶提供所需電力供應。

(III) 可能方案

(A) 垂直一體化形式經營：保持現狀

7. 在現有市場結構下，兩家垂直一體化的電力公司，一向以來為香港用戶提供安全而可靠的電力供應，這一點可從他們的供電表現指數

¹ 在某些市場，一間網絡公司可同時擁有輸電與配電兩類資產。而在另外一些市場，這兩類資產可隸屬不同公司。

(>99.99%) 而得悉。再者，這種市場結構和營運方式，在某程度上確保了營運效率。在垂直一體化結構下，公司作出決策時，可依據其整體經營目標，來作出基礎設施的投資。不過，也有一些批評指出，如保留這種垂直一體化經營模式及維持現時兩電供電範圍的劃分，可能會對提高市場效率，及降低電費所需作出的改變構成障礙。

(B) 責任分割：多層面競爭

8. 部份或全部的供電責任可予以分拆，並在以下環節引入競爭：(a) 發電環節，(b) 批發層面的發電與採購環節，或 (c) 批發與零售層面的發電與採購環節。

(a) 發電環節的競爭

依照這方案，發電設施的建設將由市場主導，規劃者將負起規劃未來發電需求的責任。任何人都可以安裝發電設施，提供電力供應給用戶。現有電力公司會被要求分拆其發電與輸電業務，以促進發電環節的公平競爭，並允許第三者使用其輸電網絡。然而，隸屬電力公司的網絡部門所擔負的責任則不變，即規劃和建設輸電與配電網絡，將電源連接至用戶，滿足市場電力需求（可以分配予市場代理商），以及將電力輸送至用戶。

這方案將 -

- (i) 推動發電設施投資者的多元化；
- (ii) 促進並優化發電資源的運用，以滿足市場的需求；以及
- (iii) 促使電費的下降。

這方案也有可能引發以下情況 -

- (iv) 責任多層分拆，造成混亂；

- (v) 潛在糾紛及相關的解決程序；
 - (vi) 新參與者（規劃者與市場代理商）的出現，將會增加成本及行政管理負擔；以及
 - (vii) 強制性要求電力公司分拆業務，可能造成干預私人商業營運的印象或實況，引起法律糾紛。
- (b) 發電與採購環節在批發層面上的競爭

根據這方案，將會出現多個批發採購商，通過公開競投方式購電，因而增加電費下調的壓力。這方案還有可能引發網絡規劃與建設責任的分割。網絡規劃將由規劃者負責，而網絡設施建設的責任，則由電力公司轄下的網絡部門承擔。供電責任將被分配給市場代理商（可以是網絡擁有者）。市場代理商從事供電／購電的競投管理，調度發電與網絡資源，保持供求平衡與網絡穩定。此外，有些批發採購商可能同時擁有配電網絡，向用戶供電的責任則由配電公司（並不一定由輸電網絡公司所擁有）承擔。

隨著買方與賣方多元化，這方案會促使電價由市場供求決定，提高批發市場的效率。與此同時，採購者的增多也將增加行政管理負擔，隨之而來的法律問題將更趨複雜。

- (c) 所有環節在批發與零售兩個層面的競爭

依照這方案，以前全部由垂直一體化電力公司承擔的責任，將被徹底分拆，用戶可以向任何發電商或其代理商購電。這方案將進一步增加買方和賣方的數目，促進競爭使電費下降。隨之而來的是市場管理複雜程度的提高，給市場參與者和用戶帶來更大的不穩定和混亂，增加行政管理負擔。

9. 供電責任的分割，無論甚麼環節或層次，都需要在制度方面作出相應的配合，清楚界定各方角色、責任和權責。這樣，一方面可以確保

各盡己責，另一方面也可確保供電的穩定和可靠性。

供應源

(I) 外國慣例

10. 大多數電力公司（或開放市場中的發電公司），利用各自的發電設施向用戶供電。這些設施大多數利用傳統能源發電，包括化石燃料（煤、石油和天然氣）、水力和核能。依據當地環境的不同，電力公司也會對其他能源進行商業開發，如風能和太陽能。也有電力公司會儘量利用聯網線路，以較低價格向其他電力公司購電，作為另外的供電源。

(II) 香港概況

11. 中電和港燈的供電來自本身或其聯營的供應源。中電依靠位於青山、龍鼓灘和竹篙灣的本地發電廠供電，亦以合營方式，從位於大亞灣的廣東核電廠及位於從化的廣州抽水蓄能電廠輸入電力。港燈則依靠位於南丫島的本地發電廠供電。

(III) 可行性方案

(A) 保持現狀

12. 兩電一向利用本身或其聯營的電力源供電，包括在龍鼓灘和南丫島兩座電廠增加發電機組，或根據需要從其他地方獲得電力。中電的電源多元化，香港區內電源的可靠性，以及其對電力源的直接控制，保證了香港電力供應的安全性、可靠性和穩定性。未來社會經濟發展所需的新增發電設施，會受到土地及其他因素限制。同時，單純依靠本地發電設施，會令電力規劃缺乏靈活性，可能會導致一定程度的剩餘投資。

(B) 可再生能源

13. 可再生能源的應用，正成為實現可持續發展的一個重要課題。機電工程署已著手研究，在香港大規模採用合適可再生能源的可行性，並將制定策略，推廣使用此類能源，以降低用化石燃料發電所造成的空氣

污染，並保護化石燃料資源。目前這研究仍在進行中²。

14. 在技術和經濟可行性允許的情況下，可再生能源作為另類能源，可對保護環境作出貢獻。但是，這種能源在可靠性方面所存在的風險，以及在可預見的將來用於商業用途的規模較小等因素，都須要加以考慮。此外，雖然可以採用特定措施，推廣可再生能源的應用，但這做法會否造成市場扭曲，必須認真加以研究。

(C) 華南供應源

15. 廣東電力系統已與中電實施聯網。鑒於未來華南地區經濟持續增長，未來幾年用電需求殷切，在可預見的將來，並沒有剩餘的電力可供應香港。廣東在用電高峰期缺電的現象非常普遍。有關華南電力供應情況，可參閱附件二。儘管沒有過剩的電力、送電能力不明朗及輸電與配電設施需要加強和改善，但是輸入電力的方案，縱使只是非經常性的電力進口，還是應該進一步探討。為此必須密切關注中國內地正在進行的電力市場改革³。

觀察要點

16. 供電責任曾是一種供應電力的權利，同時也是一種滿足市場需求的責任。必須讓公眾意識到，儘管隨著電力市場參與者增加，競爭加劇，理論上存在電費降低的可能，但事實未必如此。因為這些參與者，可能會需要承擔為滿足市場需求的潛在責任，而要求額外的保障。此外，在給予所有供電商這「權利」的同時，也隱藏著一個問題，就是一旦市場需求出現變化，誰將會／能夠承擔責任？亦即是說，由多個市場參與者分擔責任，可能會嚴重影響向用戶供電的穩定性。

17. 同樣，從香港以外地區購電或以其他方式獲得電源，必將付出一定代價，包括支付必要的基本建設或供電可靠性的費用。因此，這問題必須慎重考慮。

² 參閱能源諮詢委員會文件。

³ 根據二零零二年四月公佈的發展計劃大綱，國家電力公司將被分拆為不同公司，分別負責發電與電網業務。在南方各省將設立一家獨立的電網公司，但具體改革措施尚未完成。

徵詢意見

18. 請各委員在考慮香港的情況後，就上述問題及可供選擇的方案發表意見。值得注意的是香港兩家電力公司都是由投資者所擁有的，外國電力業務私有化、公司化的經驗，對香港電力市場的參考價值並不太大。

經濟發展及勞工局
二零零二年七月

附件一

外國在供電責任方面的經驗

在傳統的規管環境中，垂直一體化形式營運的電力公司負責為供電區域內所有用戶提供服務。在履行這一責任的過程中，在規管機構的批准下，該公司享有賺取一定投資回報的權利。

2. 以許多發達國家為例，當電力市場的改革走向公開競爭時，服務用戶責任的概念，也開始發生變化。各種傳統的責任，現已由不同的公司所分擔。

發電設施建設責任

3. 在競爭性市場的發電環節，新發電資源的規劃與建設，將由市場自行決定。發電公司參照自己的業務發展策略，根據市場訊息制訂投資規劃。一般是由獨立系統營運者或輸電系統營運者（也可以是網絡擁有者本身），負責編制市場長期需求預測報告，確定新增發電源的需要。這類信息是公開的，由市場來回應及決定投資機會是否可行。發電公司按市場價格供電，並賺取一定利潤，供電價格也可由採購協議決定。

電網建設責任

4. 在競爭性市場中，電網仍屬自然壟斷業務。獨立系統營運者或輸電系統營運者（也可以是網絡擁有者本身）或獨立規劃者，負責對輸電能力進行中央評估，識別潛在的限制性因素。而電網維修與營運的責任，則仍由電網擁有者承擔。事實上，這些電網公司，將有責任建設和擴建輸電網絡，並參照獨立系統營運者、輸電系統營運者或獨立規劃者的預測，提供所需輸電能力。受規管的電網擁有者有權賺取一定的投資回報。而獨立系統營運者和輸電系統營運者，有權批准或否決輸電網維修的請求，指示實際的輸電情況，並為此獲得一定的服務費。

連接責任

5. 網絡擁有者有責任將供電源連接到用戶，並要按法定的公平制度連接電網。在大多數情況下，立法部門會訂出基本的指導原則，為相關規管架構提供法律基礎，並會公佈有關連接 / 使用網絡申請處理程式的法則。為履行其責任，電網擁有者一般會向用戶（發電與用戶）收取電網連接費。

供電責任（對整個系統）

6. 獨立系統營運者 / 輸電系統營運者有責任保持即時電力供求平衡，調配現有發電與輸電網絡資源，確保整個電力系統的運作穩定可靠。換言之，營運者有責任行使權力，調配發電資源，包括外來電力源與電網設施，確保整個電力系統（市場）供電充足、輸電穩定，並為此收取服務費。

供電責任（對用戶）

7. 如果將供電業務的零售環節開放，引入競爭，現有配電網絡公司必須確保在其供應範圍內，向零售用戶持續供電（因而成為最終供電商）。這樣做的目的在於，一旦市場上出現新成立的零售商，因各種原因（如競爭）中斷供電業務，所有用戶仍可獲得供電。在美國某些區域電力市場，供電服務公司（如零售商）必須購買或興建本身發電設施，以確保供電充足。配電網絡公司提供連接電網服務，並賺取受規管的回報，也可通過提供後備電力服務，獲取協定的回報。

華南的供電情況

廣東電力系統已與中電系統在500 / 400千伏與132千伏互相連接。廣東省在二零零零年的總裝機容量，約為香港（港燈與中電裝機容量之和）的三倍，其中三分之一為燃油機組（一半以上為中小型重油機組）。廣東省近年來供電需求不斷增加，用電缺口主要通過從西部省份輸入電力解決。二零零一年，石油價格上漲，加上長時間乾旱，導致燃油發電機組與水力發電廠的發電量劇減，因此廣東省在用電高峰期出現缺電情況。

2. 除了高油價和乾旱天氣外，用電需求強勁增長，以及小型熱能發電與小型水力發電機組可靠性差，也是導致供電緊張的原因之一。依據第十個五年計劃（二零零一年至二零零五年），廣東省計劃逐步淘汰總發電量約200萬千瓦的小型發電機組。以每年用電需求增長率百分之七至八計算，這五年期間需要增加 1,650萬千瓦的發電能力。正在興建的發電機組，與及從西部省份輸入的電力，僅能滿足廣東省本身需求。據預測，從西部省份輸入低價電力，將導致電費降低。而隨著許多用戶從使用小型低效率電網轉向骨幹電網，將進一步加大核心電網的需求壓力。由於輸電距離長，以及水電對氣候依賴性較強，西部省份輸入電力的可靠性存在隱憂。

3. 中國內地電力市場，正經歷一場重大的改革，作為華南電網的一部份，廣東省電力系統也將受到影響，但尚未有具體詳情。

能源諮詢委員會

電力市場檢討：市場力量

議題

檢討各種評估和消減電力供應行業中市場力量的方法，和考慮適用於香港電力市場的可行方案。

背景

2. **市場力量**是市場參與者透過影響市場特質 (例如價格、市場佔有率等)以增加本身盈利的能力。對傳統受規管的電力市場而言，市場力量是指原有的電力公司運用其改變電價的能力及 / 或影響力，令其他營運者難以加入市場。對開放的電力市場而言，市場力量是指電力公司持續提升價格和盈利的能力，達至高於具競爭性的市場價格水平。

3. 在電力供應行業中，不論市場的結構如何，市場力量一般都會存在，其原因如下：

- (a) 電力是一種必需品，日常生活和商業運作都依賴連續不斷和可靠的電力供應。因而使到短期的電力需求，對電價的改變缺乏有彈性的反應。如果電價不受規管，擁有高市場佔有率的供應商，便能利用這電力需求的特性，提高電價以增加利潤，而不會引致銷售量或收入的下跌；
- (b) 在有競爭的市場裏，電力價格主要取決於電力供求量。擁有高市場佔有率的供應商，能夠影響短期的供求量差額，以推高市場價格；及
- (c) 由於電力供應行業需要大量資本，加上有其他限制，例如環境限制和用地短缺等約束，新的市場參與者，往往很難加入一個已建立的市場。縱使能夠建造新的發電設施，在競爭機制下爭取為現有或新的客戶供電，便要再建造一個新的供電網絡以輸送電力到用戶，很多時都是不切實際和

過於昂貴的。如果沒有開放供電網絡，實際上會阻礙任何新的參與者與擁有供電網絡的現有供應商競爭。

4. 在一個受規管的電力市場，原有的電力公司通常都會因為獲發專營權或歷史的發展，而扮演著獨家供應商的角色。雖然回報率、發展規劃和電價的規管機制，會在不同程度上制衡供應商行使市場力量的能力，但這些供應商實質上享有完全的市場力量。在電費規管大部份已被撤銷的開放市場中，擁有一定程度市場力量的供應商，可能會操控市場以圖利。所以規管市場力量和減低它被濫用，是確保市場能正常運作的重要考慮因素。

市場力量的種類

5. 關於電力市場的市場力量有三種，分別是水平、垂直和地域市場力量。**水平市場力量**，就是一個機構透過控制市場的單一環節，例如發電，從而推高價格圖利。當一個機構擁有市場上整體發電容量的一大部份時，它就會擁有水平市場力量。**垂直市場力量**，就是當一個機構同時涉及兩個相關的市場環節（例如發電和輸電），並透過它在其中一個環節的支配地位¹而推高價格，為本身賺取額外的整體企業利潤，或對其他供應商做成不公平的現象。**地域市場力量**是由於輸電網絡出現樽頸位置，限制了某一個地區取得外來電力供應的能力，當地的供應商因缺乏外來供電源的競爭，而可能收取用戶較高的電費。

市場力量及消減措施

(I) 海外的慣例

6. 市場力量的存在，很多時並不是真正需要關注的地方。而市場力量被濫用的潛在可能及程度，才是最重要的。在傳統受規管的市場，市場力量通常會被電費規管所局限，所以並不是一個大問題。一個設計良好的規管機制，能幫助減少市場力量的濫用。此外，在開放的市場中，亦已發展了多項消減現存或潛在市場力量的措施。

¹ 例如增加限制其他競爭者的發電設備使用其輸電網絡以供電給用戶。

7. 下列的消滅市場力量措施，普遍採用於美國、加拿大、英國和澳洲等已開放的電力市場。詳細資料載於附件一。

(a) 消滅水平市場力量的措施

- (i) 創造一個能夠鼓勵並方便新供應商進入市場的環境，以增加競爭。簽發牌照給合資格的參與者，以代替授予專營權，以及強制性開放電網給第三者使用等，都是一些方便經營者進入市場的方法。
- (ii) 限制個別供應商的市場佔有率，以平衡各方競爭力和消除他們對市場的支配地位。
- (iii) 令用戶有降低用電需求，以回應電價上升的反應能力，從而可透過擴闊電力供求的差額來降低市場價格。
- (iv) 促進和鼓勵賣家 (例如一家發電或供電公司) 和買家 (例如一個大工業用戶或一家電力批發公司) 簽訂雙邊電力買賣合約，以減低大型供電商在短期 (現貨) 市場運用市場力量的動機和能力。
- (v) 為市場價格設限²，以限制大型供電商在短期 (現貨) 市場濫用市場力量的作用。

(b) 消滅垂直市場力量的措施

- (i) 把輸電網絡的控制與發電環節脫鉤，成立一個獨立系統控制機構，以管理電網的使用和調配。這機構必須沒有在發電、批發及零售業務方面的利益。
- (ii) 把現有電力公司的發電和輸電功能垂直分拆，同時強制性開放電網供第三者公平地使用，以方便其他經營者進入電力市場。

² 設限在這裏是指為現貨市場的價格設置一個上限，而並非指輸電網絡的收費規管。

(c) 消滅地域市場力量的措施

- (i) 減低輸電網絡的樽頸，建設更多包括聯網線路等的輸電設施，從而增加從外地供應源輸入電力的能力。

(II) 香港的情況

8. 香港的兩家電力公司，並不擁有專營權。由於沒有任何規管的限制，任何經營者都可進入電力市場。但是，基於歷史發展的因素及加入市場所需的高昂成本，新供電商尚未出現。由於沒有新的市場參與者，現有兩家垂直一體化的電力公司，在其供電地區內，無形中擁有完全的水平市場力量。同時，由於兩電聯網相對薄弱，兩家電力公司亦因而擁有地域市場力量。不過，透過與政府簽訂的管制計劃協議，電力公司濫用市場力量的可能性基本上受到限制。

9. 兩家電力公司實質上的壟斷地位，將會令它們繼續擁有完全的市場力量。對投資回報、發展規劃和電費的規管，將有助減低這兩家電力公司使用其市場力量的可能性。增強聯網，使客戶可以接駁外來的供電源，將有助消滅地域市場力量的問題。不過，這將涉及龐大的資本，故需要有足夠的效益支持才能推行。無論如何，電費將因而受到即時影響，而這些影響將需透過充份評估，小心管理，及在整體電力市場檢討中一併考慮。另一方面，加強聯網亦需要兩家電力公司的贊同，以及解決相關的問題，例如新的規管措施、法律上的影響、責任、融資和回本機制等。新聯網將會作為一個獨立的项目再作研究討論。

觀察結果

10. 雖然現今大多數的消滅市場力量措施（見附件一），都只是在開放的海外市場中使用，但即使將來香港的電力市場仍受規管，有一些消滅市場力量的措施還是可以考慮引入的，這些措施將有助創造一個促進新參與者進入市場的環境。同時，假若將來希望在上市場上引入更多改變，以增加競爭，這些措施也可為此而鋪路。

徵詢意見

11. 誠邀各委員就這議題及適合香港情況的消減市場力量方法，提供意見。

經濟發展及勞工局
二零零三年四月

海外國家採用的市場力量消減措施

很多在美國、加拿大、英國和澳洲等地的電力市場，已將不同市場環節開放作不同程度的競爭。以下是這些國家在開放的市場中，普遍採用以消減市場力量的措施。

(a) 方便進入市場

創造一個能鼓勵及方便新供應商進入市場，以增加競爭的環境，能夠消減市場力量。現有的供應商如意識到增加競爭的可能性³，或能阻嚇他們不濫用其市場力量。有意見認為，把現有電力公司的業務垂直分拆，並開放電網給第三者公平地使用，是方便經營者進入市場的方法。

(b) 限制市場佔有率

為個別供應商，尤其是那些有支配地位的供應商，設置市場佔有率的上限，可減低他們濫用市場力量的潛在可能。有時亦可透過強制性將業務作水平分拆，或將發電資產分拆以達到這目的。

(c) 電力需求反應

這項措施的成效，需視乎客戶回應價格增加，從而降低電力需求的能力及願意程度。促進用戶參與電力市場的設計，是引導他們對市場作出反應的方法。不過，亦需小心考慮引進電力需求反應所引致的額外成本（例如複雜電錶的成本）。

³ “ 供應商意識到增加競爭的可能性 ”，意指現有供應商察覺或相信可能有更多競爭者加入市場與其競爭。如運用市場力量以提高價錢或降低產品或服務的質量等，便可能會被其他競爭者搶去其市場佔有率。

(d) 供電合約

由賣家 (例如一家發電或供電公司) 和買家 (例如一個大型工業客戶或一個電力批發商) 簽訂雙邊電力買賣合約，能幫助消減大型供應商的市場力量。由於市場力量在短期市場有支配性的效力。當供應商的電力輸出中佔支配地位的部份被納入這些合約之中，供應商在短期市場運用市場力量的動機和能力將會減低。

(e) 價格上限⁴

市場力量可以透過遠高於合理競爭水平的價格顯現出來。為電價設置上限，是消減濫用市場力量影響的方法。不過，價格上限可能會引致新發電設施投資減少，尤其是那些為滿足高峰期需求而設的發電設施 (即峰荷發電設施)。價格上限亦可能會扭曲市場的信號。

(f) 獨立系統控制機構⁵

成立獨立系統控制機構，是消減或消除垂直市場力量的方法。獨立系統控制機構需要公平及真正獨立，並且在發電、批發及零售業務方面，沒有任何財政上或政治上的利益，這幾點都非常重要。這將有助進一步減低擁有及操控輸電網絡的發電商，對市場產生過份影響力的機會。輸電系統的獨立操作及開放電網給所有人士公平使用，都被廣泛接納為解決垂直市場力量的機制。

(g) 減低輸電網絡的樽頸

建設更多設備，以增加輸電網絡的容量，減低輸電網絡樽頸的擠塞，將有助消減地域市場力量的問題。因為這樣可以增加輸入外來電力的能力，以消減在本地出現濫用市場力量的情況。

⁴ 價格上限在這裏是指現貨市場的價格上限，而非指輸電網絡的收費規管。

⁵ 系統控制機構是一個負責實時操作電力系統，以確保所有包括發電和輸電系統的資源，能夠可靠地調配以滿足系統需求。獨立系統控制機構，是指獨立於任何供電資源擁有者的系統控制機構，這種獨立性使它在調配資源以滿足需求時，不會偏幫任何一方。

2. 有些國家在市場改革的過渡期中，採用了上述部份消減措施，然後於市場開放後，逐漸引入其他措施。以下總結了這些國家在市場開放的不同時期所採用的各種措施。

美國

3. 在美國，多數的電力公司都是由投資者所擁有的。而結構慣常都是垂直一體化的，輸電網絡亦很多都已聯網。在一九九六年，國家能源監管機構 (Federal Energy Regulatory Commission) 要求所有輸電網絡擁有者開放其電網給第三者使用，這在一定程度上，消減了原有電力公司運用其市場力量的能力。當一些州份的電力市場進一步開放後，各州份的電力監管機構開始引入其他消減措施，例如強制性分拆發電資產，設置電價上限等。關於市場集中度方面，Department of Justice 及 Federal Trade Commission 用 Herfindahl-Hirschman Index 這種指數，作為審批合併申請的首要篩選工具。

加拿大

4. 在加拿大，安大略省及阿爾伯達省是兩個已經開放電力市場至零售層面的省份。安大略省要求原有的電力公司 Ontario Power Generation Company (OPG) 透過把發電資產出租給其他公司等方式，放棄其對發電資產的控制，從而消減 OPG 的市場力量。在過渡期間，OPG 須把營業收入設置上限，並與大型工業用戶訂立一些固定電價的合約，還需要將發電資產與輸電資產分拆。同時，亦成立了一家獨立系統控制機構 Independent Electricity Market Operator 去管理電力市場，從而消減垂直市場力量。阿爾伯達省則要求輸電網絡的擁有者，把網絡的控制和管理交給一家獨立公司 Transmission Administrator。同時，具市場支配地位的三家電力公司，需透過電力銷售安排 (Power Purchase Arrangement) 分拆其發電容量。這些為期二十年的合約，主要是透過拍賣把這三家電力公司購電的權利出售。

英國

5. 在英國，兩家具市場支配地位的發電公司：PowerGen 及 National Power 在八十年代末 / 九十年代初，透過私有化而成立。這兩家公司的市場佔有率，逐漸透過分拆而降低。其中部份的分拆，

是回應可能會被規管機構 Monopolies and Mergers Commission 調查濫用市場力量的威脅而作出的。同時，也曾在市場發展時引入電價上限。由強制聯營體市場，轉變到一個以合約為本的 New Electricity Trading Arrangements 機制的目的，也是為了解決操控價格的濫用市場力量情況，以及方便更多電力用戶參與市場。

澳洲

6. 當 National Electricity Market (NEM) 於一九九八年設立時，各參與的省份都對其公營電力公司作垂直和水平的分拆。在一些省份，發電資產亦透過私有化而分拆。NEM 亦有引入電價上限。而輸電網絡容量的限制，則透過增加聯網來降低。

能源諮詢委員會

電力市場檢討：規劃準則與可靠性標準

議題

檢討現有規劃準則及可靠性標準，並考慮可供香港電力市場選擇的方案。

背景

2. 以「供電充足」和「系統安全」的程度來評定供電可靠性，在很大程度上取決於規劃準則和可靠性標準。「供電充足」是指電力系統在任何時段都能滿足電力需求的能力，並需考慮計劃上及可預期但非計劃上，發電機及供電網絡停止運作的情況。「系統安全」是指電力系統能夠承受沖擊的能力，例如系統故障或部份供電設備突然停止運作等，亦是衡量系統穩固程度的指標。要達到「供電充足」的要求，電力公司會應用一套**規劃準則**，制定發電及輸電網絡的發展計劃，以應付未來的電力需求。而要滿足「系統安全」的要求，電力公司會制定**可靠性標準**，確保系統能達到滿意的表現，以及日常運作的安全。

規劃準則

3. **規劃準則**，是規劃電力系統發展的基礎，以確保電力系統能夠滿足未來的電力需求，並達到預期的供電可靠性。但這些準則有別於用戶所感受到的供電可靠性。就後者而言，香港兩家電力公司已制定了「平均供電可用率指數」，作為反映電力系統表現及確定規劃準則有效而足夠的指標。

(1) 外國慣例

4. 大多數電力公司均會採用「喪失負荷概率」(LOLP)，作為制定發電規劃的主要標準。「喪失負荷概率」是指在考慮了發電機組的定期維修及非計劃停止運作的情況下，電力需求有可能超過供電能力的概率。也有些電力公司在發電規劃時，會在預期最高的電力需求上，預留一定數額的備用發電容量，以應付發電機組的計劃及非計劃停止運作。這種規劃準則可作為主要準則，也可作為「喪失負荷概率」的輔助準則。電力公司會評估

規劃期內（例如十年），每年的「喪失負荷概率」及 / 或備用發電容量率，並與規劃準則作比較。如果評估結果未能符合規劃準則時，便有需要
在相關年份增建新的發電資源。

5. 在輸電規劃方面，電力公司一般會在設計電網時，考慮到關鍵網絡元件（如架空輸電線、電纜或變電器）的停止運作，大前題是這些情況不會引發網絡超載或運行的不穩定。多數的電力公司都是以「單一元件停止運作」作為基本規劃準則，而不是元件停止運作的概率。這種規劃準則通常稱為“N-1”決定性準則。電網內需要較高可靠性的重要部份，可採用更為嚴格，即考慮到兩件關鍵元件同時停止運作（即“N-2”）的規劃準則。

(II) 香港慣例

6. 由於歷史因素，本地兩家電力公司在發電和輸電方面，採用不同的規劃準則。儘管兩家電力公司會進行協調，例如交換一些規劃資料等，但卻各自制定其發電資源和輸電網絡發展計劃，以達致各自供電區內的可靠性目標。而兩電採用的規劃準則，與其他先進國家所採用的準則大體上一致。

(III) 可考慮的方案

(a) 各自獨立規劃：保持現狀

7. 如果香港的供電行業繼續採取類似目前的安排，現有的獨立規劃方式，在過去的供電可靠性數據支持下，將有助維持目前電力系統的可靠性。但這種規劃模式會引發以下問題：

- (i) 要達到各自規劃準則的要求，電力公司須預留大量的備用發電容量；
- (ii) 未能善用本港所有的發電資源；及
- (iii) 未能妥善評核其中一方的網絡規劃，可能對另一系統的網絡發展，造成潛在的負面影響。

(b) 協調／聯合規劃

8. 要善用兩個電力系統的發電容量，並將電力公司的網絡發展（例如增加輸電線路及電纜等），對整體電力系統造成的潛在負面影響減到最低，可考慮加強電力公司在規劃上的協調，甚至進行聯合規劃（將兩個系統作整體的規劃）。透過分享備用發電容量及緊急備用容量，應可帶來經濟利益，而不至於影響供電的可靠性。不過，這種規劃方式意味著：

- (i) 需要更多時間以協調發電的規劃工作；
- (ii) 需要較長時間才可完成規劃，因而可能影響負荷預測的準確性，並因而對備用容量的要求亦可能有影響；
- (iii) 會加重電力公司的行政負擔，導致業務營運效率下降和增加成本；及
- (iv) 如果進行聯合規劃，需要引入一個新的規劃單位來從事規劃工作。這做法將進一步加重行政負擔和成本，而規劃單位與電力公司間，也可能會發生糾紛，而且將無可避免地，被視為干預電力公司的業務決策。

此外，加強規劃協調，甚至進一步推行聯合規劃的先決條件，是需要加強聯網及訂定一套共用的可靠性標準（見以下第 12 至 18 段關於可靠性標準的討論）。

(c) 中央統籌規劃：開放的市場

9. 在開放的電力市場，發電設施的發展計劃是由市場作主導，是各市場參與者的商業決定（包括業務目標與策略，風險評估和預測回報等）。這種方式的潛在好處，在於可善用現有的發電資源，而增建的發電設施將會是僅足所需而及時的。

10. 不過，由於種種因素，如（用戶的）電力需求或（市場競爭者的）供電評估不準確、市場參與者投資意欲不足、或沒有及時在基礎設施上投資等，這種規劃模式可能會引至供電可靠性受到影響。要防範這種情況的出現，需由一個中央統籌規劃機構，採用制定的發電規劃準則，去預測未來的資源需求，並希望藉此引入投資者，建設足夠的發電設施，以滿足未來需求。雖然中央統籌規劃在競爭性的電力市場非常普遍，但香港兩家電

力公司可能認為，這是一種干預其商業決策的行為。

11. 中央統籌規劃機構還會評估輸電設施方面的未來增建需求，並提供相關市場的投資訊息。這種規劃方式的好處，是可以優化輸電設施的增建計劃，並消除因電網發展計劃不協調所帶來的潛在負面影響。不過，這種方式規劃同樣存在上述中央統籌發電規劃的種種問題和影響。

可靠性標準

12. 可靠性標準是用以衡量電力系統發展計劃及運行表現的基本水平，以達至預期的供電可靠性。可靠性標準的涵蓋範圍與格式，並沒有一個通用的準則。在不同的經濟體系中，不同電力系統制定和管理可靠性標準的方式亦有分別。

(I) 外國慣例

13. 在北美洲，監督電力聯網系統可靠性的工作，是由一個非牟利組織負責。這個名為 North American Electric Reliability Council (NERC) 的組織，已經制定了一套高層次的可靠性標準，供各成員自願遵守。鑒於美國和加拿大的許多電力市場已經開放，該組織發現在開放的市場中，以自願方式遵守有關的可靠性標準，是不足以確保電力系統的可靠性。因此，他們現正尋求建立一套法定的強制性執行機制。

14. 其他國家如英國和澳洲，則採取略為不同的方式，其可靠性標準基本上包含在一套守則¹內。該守則是在電力市場的形成過程中制定的，其中詳細規定了電力系統規劃和運行的技術要求，以及市場參與者接上電網和互相交換可靠性資料的要求，以確保電力系統發展及運行的可靠性。守則內的標準，需依照具法律效力的市場規例來執行。

(II) 香港慣例

15. 目前在香港，提供可靠供電的責任，由兩家電力公司負責。他們各自決定有關的可靠性標準，獨立規劃本身的電力系統，並共同營運一組低容量的聯網線路，作緊急支援用途。

¹ 在英國稱為 Grid Code（電網守則），由系統營運商 National Grid Company 執行。在澳洲稱為 National Electricity Code（國家電力守則），由 National Electricity Code Administrator 負責管理。

(III) 可供考慮方案

(a) 各自不同標準: 保持現狀

16. 這方式保證了每個系統的獨立性與安全性，並確保在一個系統出現故障時，另一個系統可以提供支援。但由於雙方不同的標準及系統配置，可能會影響或者妨礙香港電力市場及其基礎設施的發展。

(b) 統一標準

17. 採用一套相同的可靠性標準，可促使各電力公司建立一套更加穩定的運行機制，以支持電力的輸送，並有助新參與者進入市場，因而促進電力市場的競爭。但要達至公平競爭，而又可維持供電可靠性的目標，便需要建立一套可以度量及執行的標準。不過，制定統一的可靠性標準，將會加重行政負擔，可能引發潛在糾紛，因而需要建立排難解紛程序。而且可能因為要解決標準的差異，引致相關電力公司要增加投資。而監督標準實施情況及排解糾紛，將會增加行政成本。要實施統一的標準，必須考慮以下問題:

(i) 系統表現標準

- 供電中斷：頻率、持續時間與修復時間，
- 發電緊急事故：恢復發電所需時間及恢復後的發電量，
- 系統頻率：偏差與波動過後的復原，及
- 系統電壓：最高/最低值以及電壓控制要求。

(ii) 系統運行標準

- 協調：控制權限、聯絡通訊及資料交換，及
- 緊急計劃：分區切斷負載要求、通訊協定以及系統恢復程序。

(iii) 電網規劃與連接標準

- 規劃：緊急事故準則、表現準則與輔助性規定，及
- 連接：設備標準、接線介面規定、部署程序、控制權限等。

18. 可以考慮由下列方式，來制定一套適合香港的統一可靠性標準：

- (i) 由政府通過立法予以制定。這方式的優點在於制定標準的工作，是由官方機構負責，但很難避免會干預到電力公司的商業活動；或
- (ii) 由電力公司制定，供政府審批。這方式的優點在於，電力公司可依據其商業目標提出適當標準，但會被認為有自我動機而且缺乏公眾參與；或
- (iii) 由一間標準制定機構，在相關各方參與下制定。該方式的優點在於有適當的公眾參與，而且過程有透明度。不過，這將會加重行政負擔，並且需要建立排解糾紛機制。

觀察要點

19. 依據既定規劃準則，制定和實施發電擴建計劃，是客觀而且機械性的工作。不過，選擇規劃準則與可靠性標準則頗為主觀，因為不同的參與者，對可以接受的供電可靠性，也有不同意見。

20. 因此，在理論上，供電可靠性取決於電力系統現有發電設施的可用率及其實際運行表現。而事實上，這兩個因素也必然與各種外在因素，有著密切的關連，例如天氣、經濟發展、生活習慣及城市發展等。要確保供電的可靠性，必須在計劃發電設施可用率上，考慮這些變數和不明確因素，而這做法可能會導致額外投資，而令電費上漲。電力公司必須讓參與者和用戶明白，供電基礎設施，及發電和網絡設施的投資，與供電可靠性水平是成正比的。

徵詢意見

21. 本文及隨後發表的幾份文件，旨在探討與電力市場有關的各項議題，供各委員按香港目前供電的情況，仔細考慮所提出方案的可行性，以及香港電力市場的未來路向。誠邀各委員就此提出意見。

能源諮詢委員會

電力市場檢討:開放輸電網絡

議題

檢討供電行業開放電力網絡供第三者使用的做法，並考慮適合香港電力市場發展的方案。

背景

電力網絡

2. 電力網絡（輸電及配電網絡）在供電行業上擔當一個很重要的角色。它是將電力由發電機運送到終端用戶的載體。由於牽涉高昂成本及其他例如土地供應和環境因素等限制，新市場參與者如需重新鋪設另一電網，以供電給現有或新的用戶，一般來說都是不合乎經濟原則和不切實際的。電力網絡在無形中便成為新市場參與者的障礙，因而可能防礙到在供電行業中引入更多的競爭。

3. 在另一方面，開放電力網絡供第三者使用，亦會引起有關成本、可靠性和責任的問題，例如：

- (i) 為了收回投資成本，需要徵收接駁及使用網絡費用；
- (ii) 開放電網亦涉及一定的管理開支，例如需要設立一個分開的或獨立的規管機構；
- (iii) 為了維持電網系統安全及供電可靠性，必須清楚界定電網系統的運作職權，並且需要有技術守則或規例，以訂明電網接駁要求，以確保所有接入電網的設備都可和電力系統相容；及
- (iv) 所有有關機構要分擔的責任，可能需要以一個法定的框架、一套業界守則或一份由電網擁有者和電網使用者簽訂的雙邊協議，來加以訂明。

開放電網供第三者使用的機制

4. 向第三者開放電網有兩種基本方式：強制性的和非強制性的。在非強制性的方式下，開放電網是由電網的擁有者和使用者按個別要求，透過協商達致開放電網協議，協議主要涵蓋的範疇，包括使用電網的收費、接駁的收費和技術要求、可靠性的要求和責任等。但通過協商方式並不能保證第三者一定可以使用電網。

5. 在強制性方式下，電網擁有者必須按法例要求，保證開放電網供第三者使用。然而，這種方式需要密切監察是否有違規的情況出現。

監察開放電網的機構

6. 在非強制性方式下開放電網，並不需要規管監察。但在強制性的方式下，政府或是分開的/獨立的規管機構，則會監察開放電網的管理。規管機構的職責範圍亦可能包括制定接駁和開放電網的規例和守則；監察市場參與者（包括電網擁有者）對規例和守則的遵守情況；檢討及審批電網的擴充和增建計劃及其回本安排的建議；接駁和使用網絡收費。同時亦可設立一個電網的操作機構，這機構亦可成為規管機構的一部份，其作用是指揮電力系統的操作，以確保系統安全和供電可靠性。此外，亦需要一個機制以處理市場參與者之間的糾紛。

海外實例

7. 強制性的方式在很多已開放的海外市場都有採用。在德國，開放電網供第三者使用，是根據法例強制執行的。然而，詳細的安排如使用網絡的收費和接駁的技術標準，則是透過電網擁有者和使用者，根據供電行業協會訂立的一套通用綱領，進行協商而達致的。這種方式並不普遍，因為它非常依賴行業的自我規管。由於缺乏監察，曾出現若干需要在規管協助下解決的糾紛個案。

8. 在美國、英國和澳洲等地普遍使用一種較嚴密的強制性規管方式。在這方式下，向第三者開放電網是由法例規定的，而接駁和使用網絡收費都受到規管，依照商業慣例去提供網絡服務，亦受到密切的監察，再加上適當的機制，以排解可能發生的糾紛。各電網使用者都必須遵守既定的技術標準（例如電網守則），當中包括接駁界面和操作守則，以確保電

力系統的安全和供電的可靠性。

9. 海外經驗顯示，為了避免利益衝突及對所有市場參與者提供公平的經營環境，通常都需要將電網和其他業務環節，例如發電和零售，進行帳目和職能分拆，甚至資產分拆。例如在德國和美國，有法例規定帳目分拆的要求，而在澳洲和英國，更進一步把垂直一體化的電力公司，分拆為發電、輸電、配電和零售公司。

10. 在美國、英國和澳洲，為確保電網接駁的兼容性，和防止對供電可靠性的不良影響，因而建立了一套統一的技術標準，守則和規例，使到所有市場參與者在接駁及使用電網時都有所依據。制定這套技術標準、守則和規例，通常都在規管機構的監察下進行，因而增加了規管機構的行政負擔和開支。上述國家在開放電網的經驗，總結於附件一。

香港的情況

11. 在香港，中電和港燈都是垂直一體化並由投資者所擁有的電力公司。他們規劃、建設和營運各自的電力網絡，把發電源產生的電力，輸送給其供電區內的客戶。香港並沒有獨立電力生產商，亦沒有大型的自備發電經營者，所以開放電網尚未成為一個備受爭議的議題。即使一些客戶安裝了小型發電機，為緊急用電提供後備電源，這些發電機祇在電力公司正常供電中斷後才啟動，因此並不涉及起開放輸電網的問題。

12. 近來，一些大用戶開始考慮安裝個別試驗性質的發電源（主要是可再生能源，例如太陽能光伏板系統）。這些發電源的規模頗細，不足以應付有關用戶的所有電力需求，因而需要與電網並聯，由電力公司提供補充供電，以確保供電的可靠性。接駁這些獨立發電源到電網，是由電源擁有者和電力公司就個別情況，透過雙邊協商去安排的。而電源擁有者亦需滿足電力公司所定出的技術要求和支付接駁費用。

可考慮的方案

13. 開放電網供第三者使用，可促進新的電力供應商進入市場。以下臚列有關方案及其優劣，供委員參考及提出意見。

(I) 以非強制性方式開放輸電網

14. 在這方式下，新的市場參與者可透過與電網擁有者的磋商，要求接駁及使用電網。電網的使用權，及有關的接駁和使用收費，是由電網擁有者按個別情況而釐定。為確保電力系統的兼容性和可靠運作，網絡使用者必須遵守由電力公司所訂定的技術要求和運行守則，才會獲准接駁和使用電網。各方的責任亦需要在協議中列明。

15. 這方案的優點包括：

- (i) 電力公司仍然保留批准第三者使用電網，及維持電力系統可靠性的責任；
- (ii) 電力公司和第三者的責任，可在雙方的協議上清楚列明；
- (iii) 不需對開放電網作出額外的規管監察，因此可減少行政上的負擔；及
- (iv) 不會干擾私有產權。

16. 在這方案下，政府無須牽涉於協商過程中或監察協議的執行，亦無須設立排解糾紛機制。但這方案的缺點是：

- (i) 電網的擁有者可能會濫用其市場壟斷力量，提出不公平的條件或過高的收費，無形中對新的市場參與者繼續造成障礙；
- (ii) 缺乏監察機制以確保公開及公平的電網開放，因而產生更多糾紛；及
- (iii) 難於推動更廣泛使用可再生能源和另類能源。

(II) 強制性開放電網

17. 這方案主要是把電網擁有者需要公開及公平地開放其電網的規定，作為給予電力公司供電權或發給他們供電牌照的條件。開放電網可遵照下列方式規管：

- (i) 要確保技術兼容性和供電可靠性，所定的條文將包括確保：(a) 所有的第三者接駁安排要符合訂明的技術標準和可靠性目標；及 (b) 電網擁有者和使用者的責任都清楚列明於他們之間的使用電網協議內；
- (ii) 必須符合電網擁有者和使用者的雙邊協議去定出接駁和使用電網的有關細節，例如收費、技術要求、責任等。定期由電力公司公布目前及過去的使用電網合同平均指示價格，可作為市場參與者議價時的參考；及
- (iii) 為了解決糾紛，將需要一套機制去檢討及解決所有由開放電網談判過程中所引起的紛爭。

18. 另一個做法是訂定有關條文，進一步將開放電網的要求細節，例如接駁和使用電網的收費、行為守則、接駁技術標準、責任和排解糾紛機制等，作為給予專營權或供電牌照的條件。電力公司會將接駁和使用電網的收費，呈交政府或規管機構審批。由於收費的機制在規管框架下清楚列明，使用電網的收費對所有市場參與者來說，都比較具透明度。為了確保公眾安全和供電可靠性，需要制定及執行一套技術標準或守則，使新接入電網的設備，可與整個電力系統互相兼容，使電網整體可正常地運行。

19. 在第 17 段所述方案的優點是：

- (i) 電力系統的可靠性和有關機構的責任不會受到影響；
- (ii) 電網可因應有興趣參與者的需要，開放供他們使用；
- (iii) 電網擁有者和使用者的雙邊協議具備靈活性；及
- (iv) 可盡量減低政府的參與和行政費用。

20. 這方案的缺點包括：

- (i) 電網擁有者和使用者為接駁電網的細節而定下的雙邊協議，未必可以使電網公平地開放給所有用家使用；及
- (ii) 過份倚賴業界的自我規管和磋商，可能引致不少糾紛。

21. 至於在第 18 段所述的方案，由於有清楚界定和有法可依的開放電網條文，可以確保電網公平地開放給所有市場參與者使用。但是，其缺點是會被視為政府干擾私有產權和商業運作，同時因為要制定和實施規管綱領，訂立和維持技術標準/守則，及監察遵守情況，這將增加政府的行政負擔及開支。

觀察要點

22. 開放輸電網絡以提供競爭平台，被認為是在電力市場的其他環節引進競爭的先決條件。

23. 由於涉及商業利益和私有產業，電網擁有者是否已具備開放電網的條件，將需要納入電力市場的檢討範疇。

徵詢意見

24. 請委員在考慮本港電網屬私人擁有的情況下，對開放輸電網絡的議題，提出意見及建議可行的方式。

經濟發展及勞工局
二零零三年一月

開放輸電網絡的海外經驗

澳洲

澳洲在電力市場改組之前，供電行業是由垂直一體化的省屬電力公司所支配的。大致上，每一間電力公司各自建設本身的電力網絡，然後將電力由發電源輸送至各自的客戶。九十年代初期，這種運行模式在國家電力市場產生的演進過程中，開始有所改變，電力公司需要開放他們的電力網絡供第三者接駁及使用。在制定國家電力市場規則的同時，亦制定了詳盡開放電網的要求，並將其納入國家電力守則（以下簡稱電力守則）裏。開放電網的規管機制亦在電力守則中闡明，以便所有參與國家電力市場的電力公司實施。

2. 兩條主要法例：National Electricity Law（國家電力法）和 Trade Practices Act（交易慣例條例），對國家電力市場的發展提供了法律基楚。國家電力法是一條由所有參與省份都通過的法例，為保持一致性，這些省份以南澳省的法例作藍本。而在這法例的修訂於南澳省獲通過前，所有省份都要先行同意有關的修改。交易慣例條例是一條聯邦法例，適用於所有形式的貿易及商業行為，同時賦權力予規管機構：Australian Competition and Consumer Commission（澳洲競爭與消費者公署），以採納電力守則作為輸配電設備的使用守則，及頒佈市場規則。

3. 每一個參與國家電力市場的省份／領地，亦有相關的地方法例和規例，賦予省規管機構權力，以簽發牌照給市場參與者，及規管配電公司的網絡收費。省規管機構負責規管配電網絡，而澳洲競爭與消費者公署則負責規管輸電網絡。

英國

4. 在英國改組供電行業之前，英格蘭和威爾斯的發電和輸電資產是由公營電力公司：Central Electricity Generating Board（CEGB）所擁有，而配電及零售資產則由十二家地區電力局所擁有和管理。供電行業改組始於八零年代末，與公營企業私有化同時進行，將發電與輸電資產分拆。一家名為 National Grid Company（NGC）的輸電公司在一九八九年通過的電力法例下成立，取代 CEGB 擁有及經營輸電網絡。至於配電業務方面，地區電力局由新成立的十二家區域電力公司所代替。亦成立了一個電力規管機

構，並於一九九九年與氣體規管機構合併，成為 Office of the Gas and Electricity Markets (OFGEM)。

5. OFGEM 根據有關法例賦予的權力，發出發電、輸電、配電及供電牌照。NGC 持有輸電牌照，而區域電力公司則持有配電牌照。他們都有責任公平開放所經營的電網予所有市場參與者使用。由於輸配電是自然壟斷業務，所以受 OFGEM 監管。英國採用強制性開放電網的規管機制，在 NGC 和區域電力公司的牌照條款中，規定他們必須公布電網的收費原則、接駁和使用電網的收費，而這些原則及收費必須得到規管當局同意。有關接駁電網的所有技術標準，都載於由 NGC 和區域電力公司所制定和執行的輸電守則和配電守則中。

美國

6. 在美國，大部份的電力公司都是投資者所擁有的。在電力市場開放之前，供電行業主要是由垂直一體化的電力公司所支配，他們擁有和經營發電、輸電和配電設施及供應電力。而電力網絡是由電力公司建立作本身供電業務使用。

7. 供電行業的重組帶來電網開放，從而令到電力市場可引入競爭。兩條主要法例：一九七八年通過的公共事業規管政策法 (PURPA) 和一九九二年通過的能源政策法 (EPACT)，為開放輸電網絡奠下法律基礎。PURPA 是於七十年代能源供應出現不穩的大氣候下通過的，目的在於提倡節約能源和要求電力公司向已獲認證的非電力公司發電廠（稱為「合資格設施」，通常是電熱聯發和可再生能源設施）購買電力，以電力公司的「避免成本」定價（即電力公司因為向「合資格設施」購電，從而避免的發電成本）。EPACT 創造了一個競爭性的批發市場架構，讓輸電網絡開放給批發電力公司。EPACT 訂明聯邦規管機構：Federal Energy Regulatory Commission (FERC) 在批發電力市場的管轄權，並訂明零售電力競爭仍屬各州規管公署的管轄範圍。

8. FERC 於一九九六年發出兩個行政命令（888 和 889 號命令），都是和開放輸電網絡有關的。在 888 號命令（網絡開放規則）下，輸電網絡的擁有者需要提供點對點的網絡服務，服務的條件須和他們自己使用本身網絡時的條件相若。而 889 號命令（開放網絡同時資訊系統（OASIS）規則）確立了市場操守的標準，以確保公平的經營環境。它要求電力公司將批發售電業務和輸電業務分開。電網收費是受到規管的，所有擁有和經

營跨州輸電業務的公司，須將其服務收費備案，而這些服務收費及條件需和他們使用本身網絡時的收費和條件相若。

德國

9. 德國在開放電力市場之前，電力規管是按一九三五年通過的能源工業法執行的，而電力公司是在專營方式下向他們供電地區內的客戶提供電力。透過引入競爭，德國電力市場由一個傳統的規管市場轉變為一個開放市場，主要目的是要改善國內的經濟效率，其次是為了實施歐盟 96/92/EC 指引。該項指引訂下一些基本規則，由歐盟成員國納入他們的法例中，從而邁向一個開放的電力市場，其中包括提供公平的開放電網。

10. 為了實施歐盟指引並於一九九八年開放電力市場，德國修改了能源工業法（EnWG）和反競爭法（抗衡制約競爭的法例）。根據新的 EnWG，垂直一體化的電力公司必須將發電和網絡業務的賬目分拆，以確保所有市場參與者都有公平的經營環境。新的 EnWG 亦清楚列明使用電網的權利，電網擁有者有責任將能源輸送至客戶，而所提供的條件不能遜於提供給其聯營公司的服務條件。除了 EnWG 之外，反競爭法亦訂明使用電網的權利。這權利可以在民事法院執行，即第三者使用電網時如果遭到無理拒絕，是可以索取賠償的。

11. EnWG 賦予 Federal Ministry of Economics and Technology（BMW i）權力，規管開放電網的合約安排及計算輸電收費的準則。可是有關的條例仍未頒佈，因為電力行業可以根據 EnWG 的精神，自行安排開放電網，所以無需再訂立規則，而個別糾紛亦可透過反競爭法進行排解。Federal Cartel Office 是一個獨立的規管機構，它向 BMW i 負責，同時由反競爭法賦予權力，以確保所有商業活動包括電力市場，都享有公平的競爭。Federal Cartel Office 密切監察是否有違反競爭行為阻礙電網的開放，及是否有濫用市場支配地位的情況。

12. 正當其他歐盟成員國以強制性形式開放電網，德國是唯一採用協商形式的成員國，其電網擁有者和使用者可不受限制地，按一套被稱為「協會協議」（AA）的行業框架，商討接駁安排和收費。AA 訂定一些開放電網的規則和收費原則，同時亦是由主要行業協會共同制定的框架。它在實施前，曾得到 BMW i 和 Federal Cartel Office 的非正式的首肯。由於是自願形式的框架，這項君子協定本身並沒有正式法律地位。不過，如果參與機構在訂立合同時參照了這個協定，它便有約束力。AA 的最新版本被稱為

AAII+，它的有效期至二零零三年十二月。輸配電網絡的指示價格範圍必須定期公佈，供所有市場參與者作參考。輸電守則和配電守則分別對輸配電網的接駁和使用標準，作出明文規定，供所有市場參與者遵守。

能源諮詢委員會

電力市場檢討：聯網

議題

機電工程署曾委聘顧問，就加強兩家電力公司（兩電）聯網事宜進行技術研究。本文旨在列舉於考慮該項技術研究結果時需注意的重要事項，並徵詢各委員的意見。

背景

2. 機電工程署於二零零一年聘請顧問，研究加強兩電聯網在技術上是否可行。研究結果指在中電和港燈之間加設新的聯網線路，在技術上是可行的，並列出預計的工程費用和時間表。研究結果已於先前向各委員作介紹，並於二零零三年七月二十八日提交立法會經濟事務委員會討論。
3. 該項研究為檢討二零零八年後電力市場的其中一環，我們應將有關研究的結果及其他重要事項，例如商業、財務、法律及責任等問題，一併作全面考慮。

現有安排

中電 / 港燈聯網

4. 本港兩家電力公司（即中電及港燈）的輸電網於八十年代初已建立聯網。這條聯網線路由兩電合資興建，共有三組電纜線路，主要用作緊急時的支援、一些備用發電容量的分享、以及在有需要時進行小規模具經濟效益的電力交換。兩電簽訂聯網協議，詳列雙方的責任及在電力傳送方面的商業安排。過往，兩電偶爾會進行具經濟效益的電力交換，但在中電的燃油發電機退役及天然氣發電機投產後，這種電力交換的情況便減少了。

5. 由於負荷增加及其他限制（例如三組電纜間的負荷並不平均），令接駁到現有聯網線路的輸電系統出現局限，實際的聯網容量於是隨時間而逐步下降。由於輸電容量上的限制，聯網線路不能支持兩電進行大規模的電力交換，因而未能達到可觀的經濟互利作用，在規劃和運作上的協調程度亦受到限制，未能進一步減低運作成本和提升資本投資的效益，使投資者和消費者得益。現有的中電／港燈聯網線路可能需要在二零一一年左右退役，不過其有效使用期能否延長，須視乎詳細評估的結果而定。

中電 / 廣東省聯網

6. 中電的輸電網絡亦與廣東省的電力系統聯網，其聯網線路主要作用，是把大亞灣的廣東核電站及從化的廣州抽水蓄能電廠的電力，輸送到中電的供電系統，亦可將中電的電力輸送到廣東省。

加強聯網

A. 目的

7. 加強兩電聯網的目的，是要提高供電的可靠性，令消費者和投資者均有經濟得益，日後如有需要，亦能促進市場發展。

增加備用發電容量互享及具經濟效益的電力交換以獲取經濟利益

8. 由於加強聯網可以讓兩個供電系統互相分享備用發電容量，故此可以延遲需要增加發電容量的時間，以節省投資金額，並可開動較少發電機組以達到備用發電量要求，因而能夠減低運行開支。不過，兩電能分享多少備用發電容量（不包括運轉儲備，原因是現有聯網系統已能完全滿足分享運轉儲備的需要），須視乎他們在規劃和運作上的協調程度而定。

9. 加強聯網能讓電力公司在考慮購買電力會比自己發電更符合成本效益的情況下，向聯網的其他公司增購電力以供應給客戶。這方式可以在兩種情況下進行：

- (a) 具經濟效益的電力交換，所省下的發電開支由買賣雙方平分；
或
- (b) 根據聯網雙方同意的協定，由中央控制中心統一調配聯網系統中的發電資源，以求達致最低的發電成本。

10. 上述方式所節省的設施投資及發電成本應反映在電費上，從而令消費者得享較低電費。

加強相互支援，提高供電可靠性

11. 加強兩電聯網能讓雙方互補不足，相互支援，以確保供電的可靠性，特別是在緊急的情況下（例如發電機突然失靈）。相互支援可在發電系統出現故障時發揮「互補」作用，其中一種情況是由聯網的其他電力公司即時輸送電力，以恢復供電系統的供求平衡。另一種情況是，若停電的系統不能全面恢復運作，則由聯網的其他電力公司長時間輸電。

由外來電源取得電力供應

12. 外來的發電資源（例如獨立電力生產商及其他電力公司），可透過聯網線路為本地用戶提供電力，方法是由本地供電商與獨立電力生產商或其他電力公司簽訂購電協議。透過由外界輸入電力，以降低對本地發電容量的需求。此外，供電商還可以再進一步，在境外興建發電機組，為本地用戶供電。

讓外來供電商能加入競爭，用戶可作出選擇，有助日後市場發展

13. 長遠而言，聯網可提供渠道，讓外來的供電商能加入本地市場競爭，為用戶供電。這有助制衡當地市場力量，並在電力供應方面為用戶提供更多選擇。

B. 須詳細考慮的事項

14. 在考慮加強本港供電系統的聯網問題時，我們必須解決一些複雜及互有關連的問題，當中較重要的包括：

成本及潛在效益

15. 興建新的聯網線路及鞏固雙方的網絡需要大量資本投資，顧問研究估計興建新聯網線路的整體開支約為二十一億港元，包括興建擬網線路的費用（按二零零二年價格計算約需十六億港元），以及重新安排鞏固兩電系統，以容納新聯網線路的工程開支¹（約需五億港元）。聯網輸電量增加，長遠而言能節省開支，有關其應用方式見上文第 9 至 14 段。然而，與此有利益關係者（即兩電），必須考慮加強聯網在商業運作上的可行性，至於可以為消費者及投資者節省多少，則需視乎聯網的實際用途而定。

融資

16. 業界的慣常做法，是由聯網的雙方分擔所涉及的費用，不過，亦可考慮由第三者（例如另一家商業機構或政府）提供資金。有關方面可透過調整電費或徵收網絡使用費，收回建立聯網系統時的所有開支。兩個可考慮的融資方案如下 -

(i) 由兩電一同提供資金

港燈和中電是現有電力設施的擁有者和營運者，為配合新聯網線路，這些設施須具備終端 / 接駁設施及有關網絡的加強裝置。兩電早已簽訂聯網協議，以運作現時聯網系統。所以，這個方案能簡化技術銜接的問題，令新聯網線路的運作和使用更直接。不過，這個方案的先決條件，是兩電願意投資和合作。

(ii) 由第三者提供資金

若可收回所需的投資金額，而條件又能吸引投資者的話，新的聯網線路亦可由其他投資者提供資金。這個方案的優點，在於無須太依賴現有的兩家電力公司，並且能為將來電力供應引入競爭鋪路。其缺點則包括：

- 可能出現與第三者有關的責任、商業安排、法律及規管問題，詳情見下文第 18 至 21 段；以及

¹ 為了確保在電力需求增長下，電力系統仍然可靠，港燈及中電須於未來加強電力系統。這數字是提前該等工程的貨幣時間價值。

- 須得兩電同意提前進行有關鞏固網絡工程，以及讓新聯網線路接上其系統，否則便要動用額外資金。若兩電任何一方或雙方都拒絕合作，便須以行政手段或立法來推行有關計劃。
- 在投標、履行合約及監察新聯網線路擁有者表現方面，將牽涉較高的管理費用。

責任問題

17. 新聯網線路可由兩電或者第三者提供資金，前者的責任問題，可以類似現時聯網協議的方式處理。不過若新的聯網線路由第三者興建及／或運作，各方的責任便須清楚商議及規定，其中包括（但不局限於）運作權力、界面和規則、維修時間的配合、故障處理、修理費用分擔等。若因疏忽或非預定的聯網線路操作問題，引致停電、備用發電容量分享能力降低、設備損壞、用戶供電中斷等事故，當中所涉及的法律責任和賠償均須清楚列明。

業務和商業安排

18. 若香港電力市場的垂直一體化結構維持不變，則加強聯網會帶來備用發電量分享、具經濟效益的電力交換、加強緊急事故下的互相支援等問題。這些問題需要聯網雙方事先作出商業安排，而且必須制定有關條款、各方責任、結算方法，並透過具法律約束力的合約（例如聯網協議）來執行。假若涉及第三者（作為聯網擁有者及／或營運者），則要建立數個多邊協議，訂明有關條款，包括使用聯網線路費用和操作守則等。

19. 若香港的電力市場結構有所改變，而聯網成為整體電網的一部份，並開放供所有市場參與者使用，則到時使用聯網費用須加以考慮並清楚列明。當中可能包括兩套商業安排，即聯網線路的使用安排，以及電力交易的安排。

法律及規管考慮

20. 在管制計劃協議下，兩電於八十年代初興建現有的聯網系統，並且共同負責其運作。若由兩電斥資興建及操作新的聯網線路，似乎可減少甚至避免關乎所有權、接駁、操作維修方面的法律問題。不過，政府需考慮規管和其他措施，以確保社會能享受到加強聯網後的好處。若由第三者興建新的聯網線路，便須取得兩電的同意，使新聯網線路與現有網絡連接，並要兩電提前進行網絡鞏固計劃，令新的聯網系統能全面輸送電力。若未能達致此等協議，政府便須考慮有關私有產權方面的行政／立法／法律安排，促使聯網線路投入運作，並規管其使用。

技術限制

21. 顧問研究已建議出合適的聯網線路規模（即兩組七十萬千瓦電纜）、較可取的電纜路線、安裝方法、登陸點、接駁電力站和所需的鞏固系統工程。新的聯網工程約需五年時間完成，地盤工程最快可於何時開展，須視乎中環／灣仔填海計劃及西九龍文娛藝術區發展計劃的相關土地何時可供使用而定。雖然敷設電纜與海港兩岸的終端站接駁似乎沒有任何技術問題，但以上兩項大型土木工程若有任何延誤，對實施建議的新聯網計劃將有重大影響。此外，由於必須鞏固兩電網絡，俾能達到預期的輸電量，這些工程的延誤亦會影響到聯網的輸電能力。

觀察要點

22. 這次技術研究認為，加強中電和港燈的電力聯網在技術上是可行的。香港環境資源管理顧問有限公司 (ERM) 於一九九九年發表的顧問報告指出，整體而言，加強兩電聯網可以延遲新增發電容量的需求，因而帶來經濟效益，而且初步發現還會有其他好處，例如能夠改善系統的可靠性及聯網系統交換電力的能力。不過，要實施加強聯網的建議，必須考慮其經營及規管模式，例如淨經濟效益、融資安排、法律和責任、新聯網線路及兩電網絡的銜接、新聯網線路的實際應用，以及在管制計劃協議於二零零八年屆滿後的電力市場模式。

徵詢意見

23. 請各委員就本文件所提出，在推行加強本港電力聯網時須詳細考慮的目標及議題，提供意見。

經濟發展及勞工局
二零零三年九月

能源諮詢委員會

加強本港供電聯網技術性研究：顧問研究結果

引言

機電工程署曾委任顧問，就加強兩家電力公司聯網進行技術可行性研究。本文旨在簡述該項技術研究的主要結果。

背景

2. 在一九九九年完成的顧問研究初步認為，加強中華電力有限公司（中電）與香港電燈有限公司（港燈）之間的聯網可帶來整體經濟效益。為了跟進有關課題，機電工程署委任萬隆工程顧問有限公司，就加強兩電聯網涉及的事宜進行技術可行性研究。

3. 這項研究範圍如下：

- (a) 評估新聯網系統的適當規模和結構；
- (b) 研究新聯網系統的可行路線和所涉及的工程事宜；
- (c) 研究兩電電力系統能否容納新增聯網系統，以及是否需要進行系統鞏固工程；
- (d) 研究在考慮新聯網系統後，就擴展發電容量可採用的規劃準則；以及
- (e) 研究在考慮新聯網系統後，就擴展輸電系統可採用的規劃準則。

(a)及(c)項兩者密切相關，是有關研究的主要部份。

主要結果

新聯網系統的適當規模、可行路線及相關工程事宜、工程時間表及預計費用

4. 顧問公司在研究新聯網系統的規模時，已考慮一些相關的因素，例如新聯網線路在兩個電力系統的理想接駁點、現時兩套電力系統的電流量及系統限制、兩套電力系統日後的需求增長等。研究的主要結果如下：

- (i) 若不調整因電力需求增長所需的網絡鞏固工程，則正如先前研究指出，選擇以兩組新的五十萬千瓦 二百七十五千伏聯網線路連接中電油麻地電力分站及港燈新的灣仔電力分站是正確的選擇；
- (ii) 預計至二零二零年，特別是在發電規劃上加強協調後，或電力供應市場更開放後，兩電電力系統之間的電力輸送量將會增加。顧問公司建議兩條新的聯網線路額定功率應為七十萬千瓦，而電壓則為四百千伏，並於灣仔一選定地點興建新的四百千伏 二百七十五千伏變壓站，以善用因重新安排及調整預定網絡鞏固工程而增加的系統輸電能力；
- (iii) 新聯網線路的路線會由油麻地電力分站，經西九龍填海區，再經維港海床，在中環與灣仔填海區登陸，然後接入新的變壓站，並沿港灣道直達位於指定地點的新灣仔電力分站。顧問公司已徵詢有關政府部門的意見，認為有關方面提出的工程問題是可以解決的；
- (iv) 顧問公司估計整個工程計劃需時約六十個月，當中十二個月用作工程策劃，二十四個月用作設計及招標，其餘二十四個月則用作進行地盤工程；
- (v) 展開地盤工程的最早時間，需視乎中環及灣仔填海工程進展而定；以及
- (vi) 以二零零二年價格計算，兩條建議的七十萬千瓦聯網線路及相關的變壓器及開關設備，整體費用估計約為十六億元。

兩電電力系統容納新增聯網系統的能力及鞏固系統的需要

5. 顧問公司以建議的兩條七十萬千瓦新聯網線路，及為應付電力需求增長所需的網絡鞏固工程作為基準，定出四套方案進行測試，

從而找出最切合二零一零、二零一五及二零二零年情況的方案。結果如下：

- (i) 建議採用兩條新的七十萬千瓦 四百千伏聯網線路，將現有的三條聯網線路維持開路（不輸電）狀態，只作緊急後備用途，並提前進行一些兩電網絡鞏固工程。根據這個方案，有關新聯網的系統結構可讓兩電到二零二零年為止，能以最合乎成本效益的方法，達致雙方最大的電力輸送量；以及
- (ii) 與基準相比，按二零零二年的價格計算，提前進行網絡鞏固工程所需的額外費用約五億元。

在新聯網系統下擴展發電容量可採用的規劃準則

6. 就現時及新聯網線路運作後擴展發電容量可採用的規劃準則，顧問公司有以下看法：

- (i) 現時兩電發電規劃的主要準則，已考慮目前聯網線路所提供的緊急支援，而兩電在規劃上亦已作有限度協調。雖然兩電仍按各自的緊急情況而釐定輔助規劃準則，但亦已考慮了透過現有聯網線路可共用運轉儲備；
- (ii) 考慮到中電和港燈能透過聯網線路彼此支援，而中電更能透過現時與華南的聯網系統獲得額外支援，顧問公司認為按照兩電的主要規劃準則，中電和港燈網絡的喪失負荷概率與國際標準相若；
- (iii) 在加強聯網及協調規劃的情況下，兩電不同的規劃準則可以互相協調，增加雙方分享發電儲備容量，並從中得益；以及
- (iv) 在技術層面，聯合規劃和聯合調配供電比協調規劃更有好處。不過，這將涉及改變現時供電行業的結構。

新聯網系統下擴展輸電系統可採用的規劃準則

7. 就兩電輸電系統的規劃準則，顧問公司有以下看法：

- (i) 現時聯網由三條聯網線路組成，而兩電現在的輸電規劃準則只足夠在目前聯網情況下採用；

- (ii) 在建議的加強聯網計劃下，有需要檢討、協調及不時修訂輸電規劃準則，以鼓勵兩電在規劃其輸電網絡時加強協調；以及
- (iii) 若各電力系統加強聯網，但系統卻屬不同公司所有，並獨立運作，則有需要訂立規例及守則，例如電網守則。

機電工程署觀察所得及對顧問研究結果的意見

8. 在監督顧問研究進行期間，機電工程署先後舉行了十一次督導委員會會議，以便為顧問公司提供指引，並監察其研究進度。此外，亦舉行了一些工作小組會議，詳細探討特定課題及研究結果。機電工程署仔細研究了顧問公司採用的方法、假設和中期評估結果，確保所有技術問題均獲適當處理。顧問公司已運用其在世界各地供電系統聯網方面的經驗，因應香港的情況進行了研究。

9. 顧問公司對規劃準則的研究結果證實，加強聯網可增進資源分享，並且進一步提高香港供電系統的安全和可靠程度。不過，先決條件是兩家電力公司必須加強協調和合作。

未來路向

10. 顧問公司在研究中就技術上可行的聯網規模及路線、預計成本及其他相關工程事宜提出建議。機電工程署會從技術角度考慮怎樣實施有關建議。

11. 在實施任何有關加強聯網的建議前，除了技術事宜外，我們還須考慮其他問題，包括法律、融資安排、對電費可能產生的影響和法律責任等。

12. 鑒於上述事項非常複雜，但對香港又極為重要，政府會在檢討二零零八年後香港電力市場時考慮這些問題，並且會按需要諮詢相關機構、有興趣的團體和社會各界。

徵詢意見

13. 請各委員就這項顧問技術研究的結果提出意見。

機電工程署

能源諮詢委員會

電力市場檢討：規管機構的角色

議題

檢討規管機構在電力供應行業所扮演的角色，並考慮適用於香港電力市場的可行方案。

背景

2. 對電力市場進行有效及充份規管，是確保可靠供電、持續投資、合理定價及適當市場行為的必要因素。在極少或缺乏競爭的受規管市場中，規管機構的作用是提供監督，以確保用戶以合理的價格獲得可靠、安全的電力供應，並同時平衡投資者的利益。在供應鏈的某些環節進行公開競爭的開放市場中，規管機構的作用在於通過監督，建立一個高效率的電力市場，以確保電力供應安全、可靠，並為持續投資提供訊息。

3. 在傳統電力市場中，發電、輸電、配電、批發及零售結合成的「一條龍」服務，按整套服務收費。這電費以及供應商的基礎建設發展計劃，通常會受到規管機構的監督。

4. 在開放市場中，發電、批發及／或零售等環節進行公開競爭，這些服務的收費也不再受到規管。鑒於輸電及配電環節的自然壟斷性質，這兩個環節仍需接受政府規管，以確保用戶可以公平地使用電網。而有關的收費也受到規管，以確保合理的投資回報，和持續基礎建設投資，以滿足未來用電的需求。

外國慣例

5. 美國、澳洲、加拿大和英國的規管機構，通常是通過立法授權的方式，來履行其規管職責。各國規管機構的具體職責不盡相同，但其主要職責，一般包括審批被規管的企業所提交的收費申請、制定相關的規則與標準、及監督不受管制市場環節的表現。

6. 英國已全面開放了整個電力市場，但美國、加拿大和澳洲等地的情況則有所不相，並非所有州份或省份的電力市場都是全面開放的。就那些仍受規管的市場來說，規管機構的主要職責，是確保電費公正合理及電力供應商的服務與營運表現令人滿意。規管機構還需負責審批電力供應商的發展計劃、財務計劃及其建議的電費水平，並對他們的財務及技術表現予以監督。

7. 對英國及上述三國已開放的市場來說，規管機構在不同的市場環節有不同的角色。就受管制的環節（即電網）而言，其職責是監督收費、發展計劃及服務質素，並制定相關規則與程序，以確保用戶可以在公平的條件下使用電網，亦會為電網擁有者制定技術標準和營運表現目標。

8. 就不受管制的市場環節來說，規管機構的職責會引伸至包括：

- (a) 制定市場規則、守則及標準；
- (b) 負責市場參與者的註冊及簽發營運牌照；
- (c) 監督規則、守則與標準的遵守情況；
- (d) 監控市場行為，包括濫用市場力量等；以及
- (e) 協助調解糾紛。

—— 有關這些國家的規管機構，可參閱附件一的詳細職責介紹。

香港概況

9. 在香港，中電和港燈按《管制計劃協議》接受規管。根據這協議，中電和港燈必須按照財務及其他考慮因素，以合理的價格為消費者提供安全及可靠的電力供應。而兩家公司可賺取其投資上的准許回報。經濟發展及勞工局經濟發展科，在機電工程署的支援下，透過定期財務檢討，評估兩家公司的財務計劃（包括發電和供電網絡的發展計劃以及電費水平），並通過年度審核與電費檢討，來監控他們的財務與技術表現。

可供選擇方案

10. 在規管香港電力市場所擔當的角色上，有一系列方案可供政府考慮，以配合預期的目的及政府認為恰當的參與程度。儘管可以分別對這些規管功能的優點予以評定，當檢討規管的範圍與深度時，必須考慮各種可能逐步演變的市場結構與規管制度。

(A) 政府以雙邊協議的方式來規管：保持現狀

11. 如果以《管制計劃協議》繼續作為香港電力市場的基本規管框架，那麼規管機構（即政府）的職責將與目前的情況大體相同，包括設定投資回報率，監察電力供應商的財務計劃與技術表現。這是一種較簡單的規管制度，政府參與業務決策及營運的程度相對較低，所以行政負擔亦較少。這種方法使政府在確保電力供應可靠穩定的情況下，對電費進行監管。其弊端在於政府受雙邊協議所約束，因為協議如有任何變動，須徵得協議雙方的同意，因此難以對未來的市場改變提供相應支援。

(B) 減低政府參與：只負責技術規管

12. 在這方案下，政府的監管角色將降低，只會對電力公司的技術表現進行監管。商業方面的內容，即企業計劃、電費釐定、基礎設施投資需求以及財務表現等，將不再列入政府的監管範圍之內。這方案的好處在於政府規管方面的參與和行政負擔得以減少。不過，弊端在於電力供應商將可以自由決定其投資計劃，並隨意設定電費。在沒有充份競爭及用戶選擇的情況下，消費者的利益將難以在這方案下獲得保障。

(C) 擴大市場規管範圍與深度，加強政府規管角色

13. 政府可以考慮用另一種規管框架，如簽發營運牌照或授予特許經營權，來取代《管制計劃協議》。通過簽發營運牌照或批出特許經營權，規管機構可在適當情況下，提出各種不同或附加的條件，以配合不同市場結構與規管制度的需要。與《管制計劃協議》相比，這種方法更具靈活性，而其相應的規管職責可包括：

- (a) 向電力供應商簽發營運牌照，或授予特許經營權；
- (b) 規管電費，並審批發展計劃；
- (c) 制定技術表現標準，包括統一可靠性標準及規劃準則；
- (d) 監控電力公司營運表現；以及
- (e) 執行營運牌照／特許經營權條件。

這方案的關鍵問題在於實行營運牌照／特許經營權制度的理據，以及由此而產生的法律影響。

14. 倘若香港電力市場出現進一步結構變動，例如在供應鏈某些環節引進更多競爭，規管機構的職責也可能需要進一步加強。例如，為鼓勵獨立電力生產商在電力供應上參與競爭，除上述 (a) 至 (e) 的職責外，規管機構還可負責：

- (a) 審批獨立電力生產商進入市場（例如通過簽發營運牌照）；
- (b) 為發電競爭市場制定相關規則及接入網絡標準；
- (c) 監控市場行為，以及規則與標準的遵守情況；
- (d) 制定並實施相關措施，減輕不受管制環節內的濫用市場力量行為；以及
- (e) 處理申訴，協調處理糾紛。

15. 如果購電環節（批發及／或零售層面）同樣進行公開競爭，那麼電網就必須開放給第三者使用。規管機構也必須制定全套市場規則，除電網連接標準之外，還需制定詳盡的電網接入使用規例和守則。

16. 在發電與購電環節開放競爭之後，其服務收費將由市場需求主導，不再受到規管。不過，規管機構仍需監督這些環節的市場參與者，對相關技術標準及市場規則的遵守情況。另一方面，輸電與配電網絡是自然壟斷的業務，仍需全面接受規管。規管機構將負責規管接入及使用網絡的費用、服務標準、擴展計劃等。

17. 在各種市場變化的推動下，隨著更多市場特色及複雜性的出現，規管機構的管制功能會無可避免地相應擴大，但同時也會增加行政負擔和開支。外國經驗顯示，從傳統規管市場過渡到全面開放市場，規管人員數目可能需增加二至三倍。因此，在評估改變現有電力市場結構和規

管制度的同時，也應考慮到行政負擔和開支這兩個因素。如果規管機構需要通過立法，來行使上述部份或全部職責時，另一個要考慮的因素便是所牽涉到的法律問題。

(D) 由獨立機構負責規管工作

18. 政府可以繼續履行上述規管職責（尤其是(C)方案所述的職責），但也可考慮成立一家獨立機構，專門負責規管工作。例如，可以成立一家擁有技術支援能力，獲得立法授權，但在行政上脫離政府的規管委員會，來履行這職責。委員會成員可由相關團體（例如消費者、投資者、學術界以及立法會議員等）中挑選，以提供均衡的代表性。委員會成員的開支可由政府支付，也可從市場參與者收取牌照費用來支付。

19. 通過立法成立專門的規管委員會，好處在於規管職責可以得到加強，也可依據法律對規管職責予以明確界定和確認。同時，該委員會與政府脫離，資金來自電力行業，將配合香港特區實現「小政府」的目標。此外，在包括消費者在內的代表參與下，規管過程也將變得更透明。而在有效價格規管機制的配合下，委員會只需監督電力市場的技術以及業務流程等方面，除了電網之外，對市場參與者的業務決策及商業活動的介入，將減至最低。

20. 這方案的最大挑戰是如何確保委員會在規管及決策過程中，真正做到獨立與公平，以提供規管的確實性，吸引持續的投資，及保障供電的可靠性。其他的挑戰與問題還包括：增加官僚程序，因而延緩決策進程；政府會被認為抽離對電力供應的管制；委員會就其決定可能對供電可靠性造成影響而所需付上的責任；以及導致額外的成本與行政開支。儘管有關開支可通過徵收牌照費用予以解決，但最終可能會轉嫁到消費者身上。

觀察要點

21. 外地不同地區的電力規管機構，職責上大體相似，但在具體職責的分配細節上，會因管理結構與市場改革過程不同而有所差異。就香港而言，不同的市場發展方案，會導致不同規管的要求。這些要求及因此

而需要的準備工作，也會因應所採用的市場結構與規管架構而有所不同。

徵詢意見

22. 請各委員就上述問題發表意見，並根據香港的特殊情況，提供各種有關規管機構角色的建議。

經濟發展及勞工局
二零零三年四月

外國規管機構的角色

美國

美國大多數的電力公用事業公司，都是由投資者所擁有。有些電力公司的網絡覆蓋幾個州份，有些還有州際聯網。電力市場的規管架構，基本上分為兩個層次，即聯邦政府與州政府。聯邦政府規管機構為 Federal Energy Regulatory Commission（FERC），州政府規管機構為公用事業委員會（PUC）。FERC 是獨立的規管機構，隸屬於能源部，其管理範圍涵蓋電力及燃氣。在電力方面，該委員會的職責包括州際電力輸送與批發的規管，以及水力發電工程牌照審批等。

2. FERC 的權力源於《Federal Power Act of 1935（一九三五年聯邦電力法案）》、《Public Utility Regulatory Policies Act of 1978（一九七八年公用事業管理政策法案）》和《Energy Policy Act of 1992（一九九二年能源政策法案）》等法案。在執行有關法案時，FERC 有權制定相關規則及簽發指令。

3. 按照 FERC 第 888 及 889 號指令，公用事業公司必須在公平條件下，允許第三者使用其輸電網絡，並需就網絡使用收費向 FERC 申請。如果 FERC 認為有關公司所提交的收費不公正和不合理，可代為釐定有關收費。FERC 亦制定了詳盡的會計與財務申報系統，以便公用事業公司提交有關的財務資料。委員會還會監控電力市場的競爭狀況，公用事業公司必須事先獲得 FERC 批准方可出售資產、發行及購買證券、合併及收購其他公司。

4. FERC 可以就公用事業公司違反相關法律、規則及條例的行為進行調查，並可在適當情況下，舉行聽證會或依據相關法律頒佈指令，並對違法行為展開調查。任何人士如果認為 FERC 所頒佈的指令不公正，都可以申請重新聽證，也可向美國上訴法院提出司法覆核。

5. 雖然 FERC 在輸電收費規管方面，擔當著很重要的角色，但美國輸電系統的技術表現，則由電力行業通過名為 North American Electric Reliability Council (NERC) 的自願團體自行規管。後者在自願的基礎上，執行各種電力行業可靠性標準，但他們現正努力尋求法律依據，以強制執行這些標準。FERC 在這自願團體理事會中派有一名觀察員。

6. 由於美國電力系統的聯網非常發達，因此形成了幾個電力批發市場聯營體。PJM 就是美國最重要的電力批發市場之一，其服務覆蓋了賓夕法尼亞州、新澤西州、馬里蘭州、德拉瓦州、西維吉尼亞州、維吉尼亞州、俄亥俄州以及哥倫比亞特區。PJM 經營一天期限及即時電力市場，它亦是一個獨立的電力系統控制機構，負責 PJM 聯網輸電系統的可靠運作。如同其他批發聯營市場一樣，PJM 為參與者制定了一套市場營運規則，此外，PJM 還成立了市場監控機構，負責對 PJM 市場營運狀況進行監控，並通報有關問題，而在有需要情況下，亦會提出跟進措施及執行機制。

7. 在州份層面，規管電力事業的工作，由公用事業委員會負責。委員會大多享有較大的規管權，以確保其規管範圍內的電力公司以合理價格向用戶提供優質服務。在聯邦政府促進產業競爭下，許多州份推出了在電力零售環節引進競爭的措施。賓夕法尼亞州就是其中之一。

8. 賓夕法尼亞州於一九九六年十二月頒佈了《Electricity Generation Customer Choice and Competition Act (電力生產、客戶選擇與競爭法案)》。該法案以分期實行的計劃，允許用戶在互相競爭的電力供應商之間作選擇。而在市場佔支配地位及其客戶尚未享有選擇權的垂直一體化供應商，須按上述法案規定，向 Pennsylvania Public Utility Commission (賓夕法尼亞公用事業委員會) 提交執行方案，以符合法案的要求。其中幾家公用事業公司，選擇了將其發電資產分拆，但卻保留配電服務，按照規管價格收取配電網絡費，並且扮演「最後供應商」¹的角色。賓夕法尼亞公用事業委員會的主要職責如下：

- (a) 簽發發電供應商營運牌照；
- (b) 規管輸電與配電收費；

¹ 有些客戶並沒有選擇其他電力供應商，而有些客戶所選擇的電力供應商，亦可能因種種原因未能繼續提供服務。「最後供應商」是上述兩類客戶的指定電力供應商。

- (c) 制定配電公司責任，並監控其客戶服務表現；
- (d) 制定各項操作及維修標準；
- (e) 確保所有用戶都可繼續得到安全及可靠的供電服務；
- (f) 審批公用事業重組計劃；
- (g) 確定無法收回的擱淺成本，允許通過競爭性過渡收費解決這問題；
- (h) 監控針對零售用戶的供電競爭與配電狀況；以及
- (i) 回應投訴或自行展開調查，包括公司合併、整合、收購或變賣資產所產生的影響。

賓夕法尼亞公用事業委員會的多項決策過程，是以聽證會的形式進行的，然後依據聽證會結果簽發相關指令。受影響的各方如果對這些指令表示異議，可向各級法庭提出上訴。

9. 在美國，並非所有州份都在電力零售環節上引進競爭機制。佛羅里達州在近期內並沒有計劃將其零售電力市場開放，以推行自由競爭。佛羅里達的公用事業規管機構為 Florida Public Service Commission (佛羅里達公共服務委員會)，並依據佛羅里達州法規履行其職責。該委員會的主要職責包括：

- (a) 制定公用事業營運相關法則；
- (b) 聽證審理解決相關投訴，簽發各種書面指令；
- (c) 規範公用事業公司收費；
- (d) 確保公共安全並協助公眾與受規管公司交涉；
- (e) 監控電力備用容量率，設定發電可靠性標準；
- (f) 設定規管標準，並以公平一致的方式予以實施；以及
- (g) 鼓勵電力公司在營運與管理方面爭取最高效益。

佛羅里達州公共服務委員會的所有指令，都可以接受司法覆核。涉及電費的指令，可直接向該州高等法院提出上訴。

加拿大

10. 加拿大與美國的不同之處，在於大多數電力公司屬於政府所有，只有阿爾伯塔省例外，因其電力公司是由投資者所擁有。電力供應行業的規管主要由省政府負責，電力市場發展情況因省份而異。安大略和阿爾伯塔兩省在直至零售環節的電力市場開放方面，進展顯著。兩省都規定第三者可使用輸電網絡。

11. 各省的獨立規管機構，在相關省級部門規定的架構內，制定管制規則並予以執行。例如在安大略省，Ontario Energy Board（安大略能源委員會）負責對該省天然氣與電力行業進行規管監督，並就該省能源與科技部長管轄的能源事務提供意見。該委員會對電力部門的規管職責，包括審批輸電及配電收費、審批輸電及配電公司之間的合併及收購、監控市場效益及公平性、並為所有市場參與者簽發相關營運牌照。安大略省政府依據《Electricity Act of 1998（一九九八年電力法案）》設立了Independent Electricity Market Operator（IMO（電力市場獨立操作機構）），以公平合理的原則，負責管理該省的電力批發市場，並確保輸電系統的可靠性。該機構為一家非牟利組織，負責人由省政府任命。IMO 管理一套市場營運法則，如果市場參與者違反法則，或未能在財務方面達到相關要求，可能會受到制裁，包括限期糾錯、罰款或勒令退出市場等。IMO 還負責按安大略省電力需求情況，每年編制一份未來十年的電力需求預測報告，以及每季度編寫一份有關未來十八個月的電力需求預測報告。

12. 在阿爾伯塔省，Energy and Utilities Board（能源與公用事業委員會）的管理職責，與安大略能源委員會相似。不過，兩省的產業結構略有不同。Power Pool of Alberta（阿爾伯塔電力聯營組織）負責能源批發市場的營運，但輸電網絡的使用、管理與發展計劃，則由 Transmission Administrator（輸電管理機構）負責。市場監督（包括市場參與者行為的監督）由阿爾伯塔電力聯營組織屬下的 Market Surveillance Administrator（市場監督機構）負責。該省計劃於二零零三年將輸電管理機構與阿爾伯塔電力聯營組織合併，成立一家獨立的系統操作機構。

英國

13. 在英國，電力市場經歷了許多重大變化，二十世紀八十年代末至九十年代初，推出了私有化計劃及強制性電力批發聯營。依據《New Electricity Trading Arrangement（新電力貿易協定）》，聯營市場於二零零一年被以合約為基礎的市場所取代。Office of Gas and Electricity Markets（OFGEM）是英國的主要規管機構，成立於一九九九年，由原來的Office of Gas Supply 與 Office of Electricity Regulation 合併而來。OFGEM 在電力方面的主要職責如下：

- (a) 簽發營運牌照予從事供電、配電、輸電及發電的公司；
- (b) 執行牌照條件，調查投訴；
- (c) 調解消費者與供應商之間的糾紛；
- (d) 設定客戶服務質素標準；
- (e) 制定其他保護消費者措施，如設立用戶代表，確定電力最高轉售價格等；以及
- (f) 監督電力供應行業的競爭與發展情況。

14. OFGEM 規管電力供應行業的權力，是由《Electricity Act 1989（一九八九年電力法案）》以及《Utilities Act 2000（二零零零年公用事業法案）》賦予的。公用事業法案授權 OFGEM 在提交 Competition Commission（競爭委員會）之後，可以修改營運牌照內容，而貿易與工業部門對這些改動擁有否決權。如果牌照持有人被發現違反了牌照條件與相關要求，OFGEM 可對其罰款。牌照持有人可向競爭委員會的上訴審理委員會，就有關罰則提出上訴。

15. National Grid Company（NGC）是英格蘭與威爾斯的輸電網絡擁有者與營運商，並從 OFGEM 獲得營運牌照。該牌照規定，NGC 必須每年制定一份詳述有關未來七年的輸電線路容量、預期電流量及負荷等預測的文件。該文件旨在幫助那些尋求使用輸電系統，並考慮向發電行業投資的機構，以確定及評估可能存在的各種商機。

16. NGC 的輸電營運牌照，亦包括設定與實施多份關乎電力市場及輸電系統各重要層面的守則，並通過牌照條件的形式，在市場參與者與網

絡用戶中予以實施。換言之，違反該守則就意味著違反了牌照條件，規管機構 OFGEM 便有權依法採取相應的懲治措施。

澳洲

17. 澳洲國家電力市場成立於一九九八年，基本架構屬強制性批發聯營結構。輸電網絡業務的規管，是由獨立性全國電力規管機構 Australian Competition and Consumer Commission（澳洲競爭與消費者公署）負責。該公署同時還是該國的競爭規管機構，管理範圍涵蓋燃氣、通訊與機場，其在電力方面的主要職責如下：

- (a) 制定並執行輸電網絡服務標準；
- (b) 確定輸電公司為期 5 年的年度收入要求；
- (c) 審批聯網建議；
- (d) 評估與審批對電力市場營運守則所作的修改；
- (e) 調查市場行為；以及
- (f) 評估機構合併。

18. 該公署作為澳洲國家電力市場的規管機構，其權力主要基於《Trade Practices Act（交易慣例條例）》、《Price Surveillance Act（價格監管條例）》以及《National Electricity Code（國家電力守則）》。

19. 澳洲國家電力市場的管理與營運，由 National Electricity Market Management Company Limited（NEMMCO）負責。該公司是一家自籌資金的公司，股東包括各省府（國家電力市場成員省份）。每個省政府都會指派一名董事，組成該公司的董事局。NEMMCO 按照 National Electricity Code（國家電力守則，以下簡稱電力守則），管理電力市場及電力系統運作，同時亦根據發電廠可用率的表現，監察未來發電容量是否足夠，並每年發佈一份 Statement of Opportunity（SOO）聲明，對未來十年的市場趨勢進行預測。SOO 概述國家電力市場內，各管轄區的系統供電能力及供求情況預測。

20. 如上所述，電力守則全面規範了國家電力市場。National Electricity Code Administrator（NECA（國家電力守則管理機構））負責管理及執行電力守則。該機構的職責包括：

- (a) 對遵守電力守則的情況，及守則內容是否全面，進行監察及作出報告；
- (b) 執行電力守則；
- (c) 制定調解程序以處理與電力守則條文有關的糾紛；
- (d) 管理電力守則的修訂工作；以及
- (e) 每年發佈營運表現指數，參照 NECA 所設的目標，對其本身的表現進行監督。

21. NECA 也被賦予市場監督職責，負責監察市場營運情況，開展各類相關調查，並確保市場行為符合電力守則規定。如果發現違反電力守則的情況，該機構可以採取適當措施，例如經由 National Electricity Tribunal² 提出起訴，或與市場參與者簽訂自願協定，正確地執行電力守則。

22. 省政府的電力規管機構，主要負責監督電力市場的配電與零售業務。例如，Essential Service Commission (ESC)，是維多利亞省的電力規管機構。ESC 負責處理該省的電力、供水、燃氣、穀物處理及港口事務，其在電力方面的主要職責包括：

- (a) 審批配電及特許經營權用戶的電費；
- (b) 制訂配電及零售服務標準；
- (c) 監察電力零售與配電公司的市場行為；以及
- (d) 簽發該省所有電力公司的經營牌照。

23. ESC 的管理權主要基於兩條維多利亞省的法案：Essential Service Commission Act 2001 及 Electricity Industry Act 2000。

² National Electricity Tribunal 是根據《National Electricity Law (國家電力法)》而建立的。它的職責是檢討 NECA 及 NEMMCO 的決定，其中包括檢討 NECA 對於違反國家電力守則行為而實施的民事處罰，審理 NECA 對違反國家電力守則行為所提出的申請，並作出裁決。

能源諮詢委員會

二零零三年主題性住戶統計調查 公眾對香港電力供應的意見

引言

政府統計處定期進行一系列的主題性住戶統計調查，其中於二零零三年的第一季度進行的調查，收集了公眾對本港電力供應的意見。本文件將這次統計調查的結果，向各委員報告。

背景

2. 政府統計處於一九九九年開展了一系列的主題性住戶統計調查，就各政策局及部門提議的社會專題，收集有關的統計資料。由經濟發展及勞工局提出，關於香港的電力供應這個題目，是二零零三年第一季度統計調查中的三個主題之一。我們覺得這項統計調查，有助政府了解公眾對本港供電業現況的看法和期望。

統計調查

3. 於二零零三年第一季度進行的這次統計調查，涵蓋了政府統計處所確定的全港共二百一十七萬二千六百個住戶，並從中抽取共一萬零五十八個具代表性的住戶樣本。當中，成功聯絡到八千四百三十三個住戶，並且於二零零三年三月二十四日至五月十三日期間，對其中八千零二十二個住戶進行了家訪。在每個受訪的住戶中，最清楚該住戶用電情況的家庭成員，被邀請回答一份由政府統計處和經濟發展及勞工局共同制定的問卷。

主要調查結果

4. 以下總結了這次統計調查的主要結果：

A. 對電費單的意見

- 大部份的住戶都認為，電費單在用電量（85.0%）及電費方面（84.8%）所提供的資料足夠，少於 4% 的住戶則持相反意見。
- 略多於一半（55.7%）的住戶都沒有留意電費單上的資料，而 64.1%

的住戶則表示沒有興趣了解電費單上的資料。

B. 用電習慣

- 在回答有否留意家裏用電量的問題時，最常見的答案是「有時」(52.1% – 55.7%)。當被問及會否選購節能型號的產品時，最常見的答案亦是「有時」(34.1%)，其次是「不會」(33.8%) 和「經常」(32.1%)。
- 如果電費調低，16.3% 的住戶表示會增加用電量，而大部份(81.9%) 的住戶則表示不會。
- 如果電費調高，44.0% 的住戶表示會減少用電，而 51.6% 的住戶則表示不會。

C. 電力供應不同範疇的相對重要性

- 在有關電力供應的六個範疇中，最多住戶 (49.7%) 認為，「可靠及穩定的電力供應」是最重要的，其次是「低電費水平」(34.5%)，而遠隨其後的包括「有多個電力供應商可供選擇」(6.8%)、「良好顧客服務質素」(3.8%)、「提供環保電源」(3.7%) 及「簡單的電費計算方法」(1.6%)。

D. 政府在監管電力供應商方面的角色

- 51.4% 的住戶知道政府有監管電力供應商。而 12.2% 的住戶以為政府沒有監管電力供應商，36.4% 的住戶則表示「不知道」。
- 在那些知道政府有監管電力供應商的住戶中，56.5% 認為政府目前已對電力供應商作出適當的監管。而 43.3% 認為政府應加強對電力供應商的監管，0.2% 則認為政府應減少對電力供應商的監管。
- 大部份 (87.8%) 的住戶認為，電力公司的投資回報率，應該根據香港的經濟情況而作出調整，小部份 (3.1%) 的住戶則持相反意見。

E. 對可再生能源的看法

- 63.6% 的住戶支持政府引入可再生能源，而 18.9% 的住戶則持相反

意見。其餘 17.5% 的住戶表示無意見。

- 45.8% 的住戶認為，如果在香港引入可再生能源，所有的住戶都應該使用並共同承擔有關成本。然而，38.6% 的住戶認為，有關的成本應該由選擇使用可再生能源的住戶承擔。
- 如果有選擇的話，31.9% 的住戶表示會選擇使用可再生能源，而 36.9% 的住戶表示不會。其餘的住戶則表示，他們會否使用可再生能源，須視乎收費(18.4%)及家庭經濟狀況(12.5%) 等因素而定。
- 在那些表示會使用可再生能源或須視乎收費水平而決定會否使用該種能源的住戶中，14.9% 表示他們最多可接受少於 5% 的電費加幅，以支付可再生能源的費用；19.0% 則表示最多可接受的加幅介乎 5% 至少於 10%；44.6% 表示可接受 10% 至少於 20% 的加幅；而 21.3% 表示可接受 20% 或以上的加幅。平均可接受的電費加幅為 11.5%。

F. 住戶每月在電費上的支出

- 住戶在電費方面的每月支出中位數為三百二十五元。(夏天為四百二十五元，而冬天為二百元。)
- 將每月電費支出除以每月家庭收入，電費支出佔每月家庭收入的百分比中位數約為 2%。

觀察要點

5. 這是首次以香港電力供應作為主題的住戶統計調查。這次調查結果顯示，雖然電費只佔住戶每月開支的一小部份，但公眾對本港供電的安排及所涉及的問題，包括使用可再生能源等，都有相當程度的認知。特別要注意的是，多數住戶將「可靠及穩定的電力供應」列為最重要的供電範疇，而這意見更是在美國和倫敦發生大停電之前所收集到的。這點肯定了我們於檢討二零零八年後的電力市場時，須以供電可靠性作為主要目標。

6. 同時值得注意的是，約一半的住戶知道政府有監管電力供應商，並認為目前的監管水平適當。然而，大部份的住戶都認為，電力公司的投資回報率，應該根據香港的經濟情況而作出調整。

7. 這項主題性住戶統計調查，是我們聽取公眾就電力供應發表意見的第一步，調查結果亦提供了有用的初步資料。將來如有需要，我們會考慮在適當時間，因應電力市場檢討而作出其他合適的統計調查。

徵詢意見

8. 在電力市場檢討的前題下，請各委員留意這項主題性住戶統計調查的結果，並就其引伸的議題提供意見。

經濟發展及勞工局
二零零三年九月

能源諮詢委員會

香港機構對本港供電情況的意見調查

引言

經濟發展及勞工局進行了一項有關香港機構對本港供電情況的意見調查。在調查過程中，政府統計處提供了所需的專業意見。本文件旨在向委員報告這次調查的主要結果。

背景

2. 政府統計處於二零零三年上半年進行的主題性住戶統計調查，三個主題中包括由經濟發展及勞工局提議的「公眾對香港電力供應的意見調查」。該調查的目的是希望了解市民對現時本港供電情況的認知，及對未來安排的期望，其結果已於二零零三年九月份向委員匯報，同時委員亦建議政府可另外收集非住宅用戶（工商業）在這方面的意見。

統計調查

3. 這次調查於二零零四年上半年進行，其間搜集了本地工商業及公營機構對本港供電情況的意見。

(I) 調查方法

4. 為了涵蓋各類型機構，調查以政府統計處備存的機構單位紀錄庫（以下簡稱紀錄庫）為抽樣框，當中包括三十多萬家機構。調查的抽樣方式是先按香港標準行業類別分類，然後再在每個行業類別內，以僱員人數分類為小型、中型及大型機構¹。

¹

| 行業類別 | 直接僱員人數 | | |
|------|--------|---------|--------|
| | 小型 | 中型 | 大型 |
| 製造業 | < 10 | 10 – 99 | >= 100 |
| 非製造業 | < 10 | 10 – 49 | >= 50 |

5. 政府統計處認為，此類調查若能取得二千個成功受訪樣本，所得出的調查結果，已經足夠達到可接受的精確度水平。調查樣本是以隨機抽樣方式進行，從紀錄庫中抽出共三千三百多個樣本。有關問卷於二零零四年二月底以郵寄方式送到被選中的機構，而跟進工作則於其後的三月至四月間進行。截至四月中，共成功訪問了二千零一家機構，這些機構分別平均分佈於不同行業內(見附件)。

(II) 主要調查結果

6. 調查的主要結果總結如下：

A. 電費單

- 大部份機構認為，電費單上提供有關電費(81.4%)及用電量(77.4%)的資料足夠，只有少於 2%的機構認為有關資料不足夠。
- 除了電費單上每月的電費外，「與過往用電量之比較」及「每月用電量」等資料，亦是他們有留意的項目。

B. 用電情況

- 在節約用電方面，90.2%的機構表示會「關掉不需要的電器」，而過半的機構表示會「在購買電器時考慮能源效益的因素」(63.1%)及「調節空調在適當溫度以節約能源」(56.5%)。但是，只有 9.6%的機構表示有為節約能源而訂立政策指引/手冊。
- 90.9%的機構表示不會因電費調低而增加用電量，而 51.5%的機構表示他們不會因電費調高而減少用電量。

C. 各項有關電力供應的因素對機構的重要性

- 57.8%的機構認為「可靠及穩定的電力供應」是最重要的因素，其次是「合理電費水平」(15.6%)、「可選擇電力供應商」(13.5%)、「良好的顧客服務」(4.9%)、「可選擇由可再生能源產生的電力」(4.2%)及「簡單的電費計算方法」(4.0%)。

- 按機構規模分析發現，相對於小型 (56.4%) 及中型(65.9%) 機構而言，較高比例的大型機構 (76.1%) 認為「可靠及穩定的電力供應」至為重要。

D. 政府在監管電力公司上的角色

- 七成半以上的機構表示知道政府監管電力公司的工作，包括「供電安全」(46.5%)、「准許利潤」(45.4%)、「電費水平」(43.1%) 及「供電可靠性」(41.8%)。然而，仍有 23.6%的機構表示，「不知道」政府在哪些方面對香港兩家電力公司作出監管。
- 在那些表示知道政府監管工作的機構中，46.1%認為政府的監管工作足夠，而 53.9%則認為不足夠。在那些認為政府監管工作不足夠的機構中，大部份都建議政府應加強電費水平及營運成本的監管。
- 95.7%的機構認為，電力公司的准許回報率應該根據經濟環境的轉變而調整。

E. 可再生能源

- 89.1%的機構表示支持引入可再生能源作發電用途，1.2%的機構則持相反意見，餘下 9.7%的機構表示沒有意見。
- 88.9%的機構表示會選擇使用由可再生能源所產生的電力，6.9%的機構則持相反意見，餘下 4.2%機構表示沒有意見或需視乎情況而定。
- 在那些表示會選擇使用由可再生能源所產生的電力的機構中，35%表示不會接受任何增加的費用，22.1%認為加費應少於 5%，而 34.2%則表示可以接受 6%至 10%的加幅。
- 在那些表示會選擇使用由可再生能源所產生的電力的機構中，42.1%認為若需額外費用的話，應由所有電力用戶共同承擔，而 36.7%則認為只應由選擇使用由可再生能源所產生的電力的用戶支付。

F. 電費開支

- 這次調查涵蓋了廣闊領域，包括工商業，以至公營機構。由於工作性質、機構規模及運作模式的分別，不同機構的電費開支有明顯的差別。
- 過半數(58.8%)的機構表示電費開支²只佔營運成本的 3% 以下，18.4%的機構表示電費開支佔營運成本的 4% 至 9%，只有 4.6%的機構表示電費開支超過其營運成本的 15%³。
- 過半數(57%)的機構表示每年平均電費開支少於二萬元，29.9%的機構表示每年平均電費開支在二萬元至十萬元之間，而 5.5%的機構則表示每年平均電費開支在十萬元或以上⁴。

觀察要點

7. 這次機構意見調查和在二零零三年所進行的主題性住戶統計調查所得的結論大致相近。正如住宅用戶一樣：

- (i) 大部分機構均認為「可靠穩定的供電」是最重要的因素，這點更加確定了維持可靠供電，是二零零八年電力市場檢討的主要目標；
- (ii) 大部分機構都知道政府在監管兩家電力公司所做的工作，但對政府現時監管兩電的工作是否足夠，則意見分歧；
- (iii) 大部分機構認為，電力公司的准許回報率，應該根據香港經濟情況的轉變而作出調整；
- (iv) 調查結果顯示，機構的用電量不會因電費調整而改變。大部份機構均表示，不會因電費調低而增加用電量，或因電費調高而減少用電量；及
- (v) 大部分機構均表示，支持引入可再生能源作發電用途，但他們對於額外的電費應由所有電力用戶共同分擔，還是只由選擇使用可再生能源的用戶支付，則意見分歧。

² 指由機構所支付在電費單上的費用，但並不包括在大廈管理費內公用設施的電力開支。

³ 百分之十三點六的受訪機構並沒有在回答問卷時提供這項資料。

⁴ 百分之七點六的受訪機構並沒有在回答問卷時提供這項資料。

8. 正如所料，非住宅用戶的電費開支(以支付金額計)，一般較住宅用戶為高。不過，若以營運開支比例計算，大部分機構 (77%) 的電費開支少於 10%。雖然這些非住宅用戶的電費開支各異，但他們對供電的期望大致相同，即供電可靠性是首要要求。

9. 這次調查及先前的主題性住戶統計調查，均提供了有用的參考資料，對現時正在進行的電力市場檢討非常有用。市民對於供電方面及有關事項的了解程度，正好反映了政府對未來電力市場發展諮詢時所需要注意的地方。

徵詢意見

10. 請各委員留意這些調查結果。

經濟發展及勞工局

附件

香港機構對本港供電情況的意見調查

調查所涵蓋的行業

| 行業 ⁵ | 成功收回的 問卷數目 |
|-----------------|---------------|
| 製造業 | 289 |
| 建造業 | 293 |
| 批發、零售、飲食及酒店業 | 258 |
| 進出口貿易 | 282 |
| 運輸、倉庫及通訊業 | 278 |
| 金融、保險、地產及商用服務業 | 278 |
| 社區、社會及個人服務業 | 323 |
| 總計: | 2001 |

⁵ 按香港標準行業分類的行業類別分類

其他經濟體系電力市場的概觀

在檢討香港電力市場的過程中，我們參考了其他經濟體系的相關經驗，並於二零零三至二零零四年間，對下述經濟體系中電力市場的主要參數、特徵和發展等，進行了研究，現將觀察所得的要點總結於下列表中：

- 澳洲
- 加拿大
- 德國
- 日本
- 中國大陸
- 新加坡
- 英國
- 美國

經濟發展及勞工局

二零零四年十月

澳洲

| | |
|---------|--|
| 人口 | 一千九百八十萬(二零零二年) |
| 發電裝機容量 | 四千四百八十萬千瓦(二零零二年) |
| 發電燃料組合 | 燃煤佔百分之六十點九，水電佔百分之十六點五，燃氣佔百分之十三點三，燃油佔百分之三點一，其他佔百分之六點二(二零零二年) |
| 最高負荷需求量 | 三千三百五十萬千瓦(二零零二年) ¹ |
| 備用容量率 | 百分之三十三點七(二零零二年) ² |
| 負荷組合 | 住宅用電佔百分之二十六點七，商業用電佔百分之二十三點八，工業及其他用電佔百分之四十九點五(二零零二年) |
| 總用電量 | 一千七百六十三億千瓦時(二零零二年) |
| 市場結構/特點 | <p>市場改革前（在九零年代初之前）</p> <ul style="list-style-type: none"> • 市場由政府擁有的一體化電力機構所壟斷，並逐步公司化成為省屬電力公司 • 電價由個別省政府，按成本外加利潤的方式訂定 • 祇有某些省份之間有聯網 |

¹ 根據各省/地區個別用電峰值總和推算，而各峰值出現於年中不同時間

² 根據各省/地區個別用電峰值總和計算

| | |
|---------|--|
| 市場結構/特點 | <p>市場改革之後的主要變動/現況</p> <ul style="list-style-type: none"> • 參與國家電力市場（NEM）的省內電力公司，被分拆為發電、輸電、配電、和供電公司 • 兩個省份（維多利亞省和南澳省）把供電資產私有化，而其他省份的電力業，依然由省政府擁有的電力公司支配 • National Electricity Code Administrator 和 National Electricity Management Company Limited 在一九九六年成立，分別負責管理國家電力守則，及管理電力系統/市場的運作 • 一九九八年引入 NEM 批發市場競爭，及強制性開放電網 • 電網業務以 CPI-X 的價格或收入上限的方式去監管 • 零售市場分階段開放，一些省份自二零零二年開始，已全面引入零售競爭 • 有報導指某些省份在市場改革後，電價下降達百分之二十五至三十 • 進一步改革的預備工作，正在進行中，包括成立新的規管機構 |
|---------|--|

加拿大

| | |
|---------|--|
| 人口 | 三千二百五十萬(二零零三年) |
| 發電裝機容量 | 全國：一億一千一百萬千瓦(二零零二年) 安大略省：三千萬千瓦(二零零二年) |
| 發電燃料組合 | 全國：水電佔百分之六十，火電佔百分之三十，核電佔百分之十(二零零二年) 安大略省：燃煤佔百分之二十六，燃油/燃氣佔百分之十二，核電佔百分之三十六，水電及其他佔百分之二十六(二零零二年) |
| 最高負荷需求量 | 安大略省：二千五百四十萬千瓦(二零零二年) |
| 備用容量率 | 安大略省：百分之十八(二零零二年) |
| 負荷組合 | 安大略省：住宅用電佔百分之三十一，非住宅用電佔百分之六十九(二零零二年) |
| 總用電量 | 全國：四千八百七十億千瓦時(二零零二年) 安大略省：一千五百二十億千瓦時(二零零三年) |
| 市場結構/特點 | <p>加拿大的電力市場，主要是由各省份各自管轄，其中阿爾伯特省和安大略省的改革較大(以下是安大略省的市場發展情況)。</p> <p>安大略省的市場改革前（在九零年代末之前）</p> <ul style="list-style-type: none"> • 由一家政府擁有的一體化電力公司支配批發市場 • 在市的層面有超過三百家配電公司 • 與鄰近省份/地區有電力交易 |

| | |
|---------|---|
| 市場結構/特點 | <p>安大略省的市場改革後的主要變動/現況</p> <ul style="list-style-type: none"> ● 電力業務功能分拆為不同的公司，但仍由政府擁有 ● 發電公司須逐漸減低其發電市場的佔有率，及放棄部份發電容量的控制權 ● 輸配電公司受獨立規管機構的監管 ● 批發和零售市場的競爭，在二零零二年五月開始，但由於電力短缺使批發價上升，政府於二零零二年十二月起，實施強制性凍結零售電價 |
|---------|---|

德國

| | |
|---------|--|
| 人口 | 八千二百五十萬(二零零二年) |
| 發電裝機容量 | 一億零五百九十萬千瓦(二零零二年) |
| 發電燃料組合 | 燃煤佔百分之五十一，核電佔百分之三十一，燃氣佔百分之七，可再生能源和廢料發電佔百分之九，燃油佔百分之二(二零零二年) ³ |
| 最高負荷需求量 | 七千九百七十萬千瓦(二零零二年) |
| 備用容量率 | 百分之三十二點九(二零零二年) |
| 負荷組合 | 住宅用電佔百分之二十七點六，工業用電佔百分之四十四點八，商業及其他用電佔百分之二十七點六(二零零二年) |
| 總用電量 | 四千九百三十億千瓦時(二零零二年) |
| 市場結構/特點 | <p>市場改革前（在九零年代中之前）</p> <ul style="list-style-type: none"> ● 共存不同的資產擁有方式：電力公司由私人投資者或市政府擁有，或由私人投資者與地方政府共同擁有 ● 電力行業相當分散，有超過九百家電力公司 ● 由八家大型區域電力公司支配市場 ● 電力公司有供電專營權 |

³ 按發電電能計算

| | |
|---------|--|
| 市場結構/特點 | <p>市場改革之後的主要變動/現況</p> <ul style="list-style-type: none"> • 在歐盟指引推動下，一九九八年開放市場，取消專營權，而用戶可自由選擇供應商 • 仍然相當分散及共存不同的資產擁有方式，由四家大型區域電力公司支配市場 • 對一體化電力公司，實施強制性帳目分拆及開放電網 • 電網開放是透過協商方式，及按照行業協會訂立的自發性框架來進行，現正計劃成立規管機構以規管電網開放 • 工業用戶電價比較低，但住戶平均電費有所增加，主要是由於環保稅的關係 |
|---------|--|

日本

| | |
|---------|--|
| 人口 | 一億二千七百萬(二零零三年) |
| 發電裝機容量 | 二億三千七百萬千瓦(二零零二年) |
| 發電燃料組合 | 火電佔百分之六十二，核電佔百分之十九，水電佔百分之十九(二零零二年) |
| 最高負荷需求量 | 一億七千六百七十萬千瓦(二零零二年) |
| 備用容量率 | 百分之三十四(二零零二年) |
| 負荷組合 | 住宅用電佔百分之三十一，非住宅用電佔百分之六十九(二零零二年) |
| 總用電量 | 八千四百一十五億千瓦時(二零零二年) |
| 市場結構/特點 | <p>市場改革前（在九零年代中之前）</p> <ul style="list-style-type: none"> • 市場由十家一體化由投資者擁有的電力公司所壟斷，各自有互不重疊的供電區域 • 有一些發電設施，由電力公司和政府共同擁有 • 電力公司之間，合作發展發電設施及交易電力 <p>市場改革之後的主要變動/現況</p> <ul style="list-style-type: none"> • 電力公司仍是一體化並由投資者所擁有，但需向其他供應商，提供轉送批發電力的服務 • 自從一九九五年開始，引入以競投方式籌建新發電設施 • 零售市場自二零零零年開始局部開放，容許大用戶選擇供應商，並在二零零四至二零零五年擴展至較小的用戶，現正考慮於二零零七年全面開放市場 • 改革後電費有下降趨勢，一九九七年至二零零二年間，電費約下調百分之十一 • 市場以投資回報的規管方式規管 |

中國大陸

| | |
|---------|---|
| 人口 | 十二億八千七百萬(二零零三年) |
| 發電裝機容量 | 三億八千五百萬千瓦(二零零三年) |
| 發電燃料組合 | 火電佔百分之七十四，水電佔百分之二十四，核電佔百分之二(二零零三年) |
| 最高負荷需求量 | 二億一千萬千瓦，經主要電網統調(二零零二年)；非統調發電需求數字不詳 |
| 備用容量率 | (沒有提供) |
| 負荷組合 | 住宅用電佔百分之十二，非住宅用電佔百分之八十八(二零零三年) |
| 總用電量 | 一萬六千二百億千瓦時(二零零二年) |
| 市場結構/特點 | <p>市場改革前(在二零零二年底以前)</p> <ul style="list-style-type: none"> • 由政府擁有的一體化國家電力公司支配 • 共分六個區域電網，並有一些地方/區域性的一體化電力公司。這些公司大部份都是國家電力公司的附屬公司，但廣東省則屬例外，因其供電業務由省政府所擁有 • 有一些獨立發電商，可售電予國家電力公司或地方/區域性的電力公司 <p>市場改革之後的主要變動/現況</p> <ul style="list-style-type: none"> • 國家電力公司的資產，分拆為五家發電集團公司，及兩家電網公司 • 成立國家電力監管委員會，執行主要監管工作 • 幾個區域市場，於二零零四至二零零五年間開始運作，模擬實行批發市場競爭 • 國家發展和改革委員會，負責制定價格政策，而地區機構則負責審批地區電費 • 燃料費上漲及供應短缺，使電費水平處於上升軌道 |

新加坡

| | |
|---------|---|
| 人口 | 四百六十萬(二零零三年) |
| 發電裝機容量 | 八百九十萬千瓦(二零零三年) |
| 發電燃料組合 | 燃油佔百分之五十一，天然氣佔百分之四十三，其他佔百分之六(二零零二年) ⁴ |
| 最高負荷需求量 | 五百一十萬千瓦(二零零三年) |
| 備用容量率 | 百分之七十五(二零零三年) |
| 負荷組合 | 住宅用電佔百分之二十，非住宅用電佔百分之八十(二零零三年) |
| 總用電量 | 三百二十億千瓦時(二零零三年) |
| 市場結構/特點 | <p>市場改革前（在九零年代中之前）</p> <ul style="list-style-type: none"> • 政府擁有的供電局，直至一九九五年都負責供應電力 • 供電業於一九九五年公司化，並分拆成幾家仍屬政府擁有的公司 <p>市場改革之後的主要變動/現況</p> <ul style="list-style-type: none"> • 大部份供電業務，仍然由政府擁有 • 一九九八年引入電力聯營體形式的批發市場 • 二零零一年成立獨立規管機構及系統操作機構，負責規管市場和操作電力系統 • 成立市場營運機構，營運於二零零三年開始運作的新電力批發市場 • 零售市場自二零零一年開始分階段開放，讓大用戶可以選擇供應商，現正考慮將選擇供應商的安排擴展至所有用戶 • 電費水平維持穩定 • 電網業務以 CPI-X 的規管方式規管 |

⁴ 按發電電能計算

英國

| | |
|---------|---|
| 人口 | 五千九百二十萬(二零零二年) |
| 發電裝機容量 | 七千七百萬千瓦(二零零二年) |
| 發電燃料組合 | 燃煤佔百分之三十六，燃氣佔百分之三十一，核電佔百分之十六，燃油佔百分之五，水電佔百分之六，可再生能源佔百分之一，其他佔百分之五，(二零零二年) |
| 最高負荷需求量 | 五千九百萬千瓦(二零零二年) ⁵ |
| 備用容量率 | 百分之三十點五(二零零二年) ⁶ |
| 負荷組合 | 家庭用電佔百分之二十九，工業用電佔百分之三十七，服務業及其他用電佔百分之三十四(二零零三年) |
| 總用電量 | 三千四百三十九億千瓦時(二零零二年) |
| 市場結構/特點 | <p>市場改革前(英格蘭和威爾斯，八零年代末之前)</p> <ul style="list-style-type: none"> ● 市場被政府電力公司 Central Electric Generating Board (CEGB) 所壟斷，擁有及營運發電和輸電設施 ● 配電設施亦是政府擁有，並由十二個 Regional Area Boards 管理 ● 一些獨立發電商可售電予 CEGB |

⁵ 根據英格蘭和威爾斯，蘇格蘭和北愛爾蘭個別用電峰值總和推算，而各峰值出現於年中不同時間

⁶ 根據英格蘭和威爾斯，蘇格蘭和北愛爾蘭個別用電峰值總和計算

| | |
|---------|---|
| 市場結構/特點 | <p>市場改革之後的主要變動/現況</p> <ul style="list-style-type: none"> • 除了一些舊核電廠之外，所有電力公司都已私有化 • 所有業務功能都被分拆，而每一家公司都須領牌才可經營 • 強制性開放電網，電網業務以 RPI-X 的價格上限方式去規管 • 一九九零年以電力聯營體形式，引入批發市場競爭，並於二零零一年由新電力交易安排所取代 • 自一九九九年，分階段引入零售競爭，讓所有用戶都可自由選擇供應商 • 典型用戶的電費，較改革前下降了百分之三十，但近期價格有上升趨勢 • 現正計劃與蘇格蘭的電力市場合併 |
|---------|---|

美國

| | |
|---------|---|
| 人口 | 二億九千萬(二零零三年) |
| 發電裝機容量 | 九億零五百萬千瓦(二零零二年) |
| 發電燃料組合 | 燃煤佔百分之五十，燃氣佔百分之十八，水電佔百分之七，核電佔百分之二十，其他佔百分之五(二零零二年) ⁷ |
| 最高負荷需求量 | 七億一千五百萬千瓦(二零零二年) |
| 備用容量率 | 百分之二十七(二零零二年) |
| 負荷組合 | 住宅用電佔百分之三十七，非住宅用電佔百分之六十三(二零零二年) |
| 總用電量 | 三萬四千六百三十億千瓦時(二零零二年) |
| 市場結構/特點 | <p>大致上分為批發和零售市場，前者由 Federal Energy Regulatory Commission (FERC)監管，後者由各州份的規管機構監管</p> <p>市場改革前（在九零年代中之前）</p> <ul style="list-style-type: none"> ● 共存不同的資產擁有方式：由私人投資者擁有的電力公司佔多數，亦有部份由聯邦政府、市政府或地方互助組織擁有 ● 每個州份都有幾家一體化電力公司支配市場，亦有一些不屬於電力公司的發電商，產電及售電予電力公司 ● 一些市政府或地方互助組織只擁有配售電業務 ● 州與州之間透過聯網進行電力交易 |

⁷ 按發電電能計算

| | |
|---------|--|
| 市場結構/特點 | <p>市場改革之後的主要變動/現況</p> <ul style="list-style-type: none"> • 共存不同的資產擁有方式：仍由私人投資者擁有的電力公司，佔市場支配地位，但不屬於電力公司的發電商的市場佔有率，正在增長中 • 網絡業務須與其他業務分開，強制性開放電網 • 批發市場繼續發展，一些區域批發市場相繼出現或正在擴展中 • 批發電價隨市場供求情況波動，加州的電價在二零零零至二零零一年間大幅波動，造成一些供應商瀕臨破產 • 個別州份自九零年代末開始，引入零售市場的競爭，但步伐各異，而電費水平亦各有不同 • 投資回報是較普遍的規管方式，但亦有一些州份採用表現為本的規管方式 |

能源諮詢委員會

廣東省電力市場的最新情況

引言

本文概述廣東省電力市場的最新發展情況。

背景

2. 為了建立一個政企分家、公平競爭、開放有序、健康發展的電力市場體系，內地的電力市場正進行大規模改革。在二零零二年十二月，有關方面正式宣布國家電力公司將進行重大改組，改組內容包括成立五間發電集團公司和兩間電網公司¹，以管理和監控國有供電資產。同時，亦成立國家電力監管委員會（以下簡稱「電監會」），擔負起規管電力市場的主要工作，包括推行市場改革和擬定電力市場發展規劃等。

3. 在二零零三年及二零零四年年初，電監會宣布會在東北、華東及華南分別建立區域電力市場。東北區域電力市場在二零零四年一月開始模擬運作，華東電力市場則定於二零零四年年中開始模擬運作。根據電監會現時的計劃，華南市場的模擬運作將於二零零五年開始，其範圍包括廣東、廣西、貴州、雲南及海南五省。

廣東省的最新發展情況

4. 廣東省的供電設施並非由國家電力公司擁有或營運。在二零零一年之前，廣東省內的輸電網絡和大部份發電資產均由屬省政府擁有的廣東省電力集團公司監控。在二零零一年八月，廣東省電力集團公司拆分為兩家公司，即廣東省 電資產經營有限公司及廣東省廣電集團有限公司，以管理及監控省政府的發電及輸電設施。在二零零三年，廣東省 電資產經營有限公司改名為 電集團有限公司，廣東省廣電集團有限公司則併入中國南方電網

¹ 五家發電公司為中國華能集團、中國大唐集團、中國華電集團、中國國電集團及中國電力投資集團。兩家電網公司為國家電網公司及中國南方電網有限公司。

有限公司，該公司在二零零二年成立，負責管理廣東、廣西、雲南、貴州及海南各省內的所有輸電網。

5. 廣東省內用以發電的燃料組合包括火電（76%）、核電（15%）及水電和其他能源（9%）²。部份供電來源是「統調」的，部份卻不是。「統調」的供電來源是指由省級控制中心集中管理的電源，包括省內的主要發電源及從西部省份和香港等地輸入的電力。「非統調」的供電源所供應的電力約佔全省總發電容量 40%，主要是非省級控制中心管理的地方小型發電設施。就應付系統電力需求而言，這些發電設施並不及「統調」的發電設施般可靠。

6. 廣東省設有市／縣級供電機構，為省內的用戶供電。為滿足省內的用電需求，廣東省亦會從鄰近省份／地區輸入電力，這些地區包括廣西、雲南、貴州及香港。

電力供求平衡

7. 由於經濟發展迅速，用電需求遠較預期為大，廣東省近年出現供電緊張的情況。二零零三年，廣東省內「統調」供電源的最高需求達二千五百三十萬千瓦，較二零零二年的最高需求高出 26%。備用容量（只計算「統調」的供電源）不足 1%，因此，必須從鄰近省份／地區輸入大量電力³，並且在用電高峰時間限制用電⁴。

8. 二零零四年，廣東省的電力供求情況持續緊張。西部省份乾旱缺水，影響當地水力發電源對廣東省的供電⁵，而近期全國性的燃煤供應短缺，亦令省內的供電情況雪上加霜。雖然二零零四年中有一組由三峽到廣東省的輸電線路投產。不過，三峽所生產的電力亦需分配給其他電力短缺的省份／地區，故只能為廣東省提供有限度的支援。

² 根據二零零三年產生的電能。

³ 在二零零三年八月的高峰期，從西部省份及香港輸入的總電量約為六百六十萬千瓦，約相等於「統調」供電最高需求的 26%。

⁴ 根據報導，由於需求較預期高，由二零零三年三月起在 8 個城市實施限電措施。在二零零四年第一季，實施限電措施的城市／地區共 21 個。

⁵ 乾旱令二零零四年第一季從西部省份輸入的電量與二零零三年同期比較，下跌超過 40%。

9. 雖然較早前廣東省發展計劃委員會預測⁶，廣東省的電力供求可在中期至長期達致平衡，但環境瞬息萬變，很多不明朗因素仍然存在，例如那些較不可靠的「非統調」供電源及低效率、高污染的小型火力發電設施逐漸被淘汰，均可能令預計的發電容量無法完全達到。此外，當時預測的電力需求，或未能考慮過去兩年的高增長率，換句話說，實際的需求增長率可能會較早前預測的為高。

電網的發展及供電的可靠性

10. 五百千伏輸電網絡是廣東省電網的主幹網絡。廣東省電網是華南電網的其中一部份，當中亦包括廣東、廣西、貴州及雲南各省份的跨省聯網線路。廣東省已計劃斥資約六百億人民幣，在第十個五年計劃內加強其電網。在二零零三年六月，貴州至廣東的五百千伏輸電線路投入運作，使由西部省份至廣東省的輸電能力達至五百二十萬千瓦。連同在二零零四年中建成的三峽輸電線路，可提供的總輸電容量超逾廣東省總電力需求的 20%。

11. 廣東省電網亦與香港的四百千伏及一百三十二千伏輸電網絡聯網。這些聯網線路主要讓中電從其聯營供電源（即大亞灣廣東核電廠及從化廣州抽水蓄能電廠）輸入電力及向廣東省出售電力。

12. 由於廣東省仍會繼續依賴從其他地區輸入電力，跨省輸電網的可靠性對其供電的可靠性尤為重要。至於內地電網的供電可靠性表現，根據從主要城市所得的數字，其供電可用率一般較香港低，例如在二零零二年，廣州市的供電可用率為 99.96%⁷，而香港供電可用率達 99.99%。

觀察要點

13. 預期廣東省的電力供求情況在短期內仍會緊張，而且該省會繼續依賴輸入電力來滿足當地的需求。中國南方電網有限公司曾公佈一些應付供電緊張的措施。這些措施包括加快進行電網鞏固工程、加強系統的運作和協調、確保可從西部省份及三峽輸入電力、推廣用電需求管理及節約能源、充份利用現有的發電資源等。

⁶ 根據在二零零一年展開第十個五年計劃（二零零一至二零零五年）時所作的預測。

⁷ 根據中國電力企業聯合會的報告。

14. 由於廣東省仍在改革電力市場及發展供電系統，加上用電需求增長難以預測，故此日後的電力供求情況仍是未知之數。根據所得的資料，廣東省及內地多個地方在短期內仍會受供電短缺的問題困擾，至於長遠能否解決這個問題，則仍難以確定。在現階段，亦難以預測供電短缺對電力市場改革及廣東省電力系統發展計劃的影響。我們會繼續密切留意廣東省的情況，以掌握能夠引入內地電力的機會及對本港電力市場的影響。

二零零三年八月十四日發生在美國及加拿大的停電事故

二零零三年八月十四日（星期四），在美國及加拿大發生了一次大規模的停電事故，包括美國中西部 and 東北部以至加拿大安大略省的廣泛地區都受到影響。美國加拿大電力系統停電事故工作小組對這次事故作出了調查。本文旨在將其調查結果¹向各委員報告。

背景

2. 二零零三年八月十四日，美國中西部和東北部的多個州及加拿大安大略省發生了停電事故。這次事故被認為是北美歷史上最大規模的停電事故之一。停電影響到密歇根州、俄亥俄州、賓夕法尼亞州、紐約州、新澤西州、佛蒙特州、麻薩諸塞州、康涅狄格州及加拿大的安大略省。事故中有超過兩百家發電廠關閉，造成約六千一百八十萬千瓦的客戶負荷喪失，令約五千萬人受到影響。美國某些地區的電力供應四天後仍未能恢復，而安大略省的部份地區，在電力供應全面恢復前，持續有一個多星期的間歇性停電。

3. 美國總統和加拿大總理決定成立一個美國加拿大電力系統停電事故工作小組（以下簡稱「工作小組」），調查這次停電的原因以及找出防止未來停電事故的措施。工作小組在美國能源部長和加拿大自然资源部長的共同帶領下，於二零零三年十一月十九日發表了中期報告，內容主要集中論述停電的起因。工作小組並於二零零四年四月五日發表了總結報告，內容包括如何防止停電或盡量縮小未來停電範圍的建議。

北美電力系統

4. 北美的電力網絡結構複雜。包括超過三十二萬公里的輸電線路（電壓在二百三十千伏或以上），其中涉及跨越了州、省以及國家（如美國，加拿大以及墨西哥）的不同電力公司的大型聯網。該互聯電網的供電來自超過三千五百家公用事業公司，共九億五千萬千瓦的發電設備，服務超過二億八千萬人口。

¹ 根據美國加拿大電力系統停電事故工作小組二零零四年四月發表的《關於二零零三年八月十四日發生在美國及加拿大的停電事故的總結報告》。

5. 整個系統被劃分為三大電網，即東部聯網系統、西部聯網系統和 ERCOT 聯網系統（只包括德克薩斯州）。三大電網彼此獨立，其間只有幾條直流線路連接。東部聯網的東北部份（大約佔該聯網系統總負荷的10%），受到這次停電事故影響，而其他兩個聯網系統在這次事故中完全沒有受到影響。

6. 近年來，電網的使用在北美有顯著擴展，這不僅是經濟增長的結果，亦是由於供電行業競爭加劇之故。原本用來提供本地電力供應以及連接附近電力公司和鄰近州、省，以共享電力供應資源的輸電線路，已被用於日益增加的區域電力交易上。

7. North American Electric Reliability Council（北美電力可靠性委員會，以下簡稱 NERC）以及它的十個區域可靠性委員會（以下簡稱 RCs），是監察北美電網可靠性的主要組織。這些非政府組織的經費，來自供電行業內的公用事業公司。自一九六八年成立以來，NERC 一直以自願機構的形式運作。它依靠所有電力供應行業參與者之間的互相督促，來確保它以及其 RCs 所訂出的可靠性規定得以遵行。

事故

事故發生之前

8. 二零零三年八月十四日，俄亥俄州北部電力需求處於溫和偏高水平。當地其中一個電力供應商，First Energy（以下簡稱 FE），正輸入超過二百萬千瓦電力，以應付其服務地區內大約一千二百萬千瓦的總負荷。這電力輸入量是在既定的允許範圍內。到了下午一時三十一分 FE 位於俄亥俄州北部 Eastlake 發電廠的第五號發電機組因勵磁系統發生故障而跳掣²。這台機組的故障並未使電力系統進入不穩定狀態，但 FE 需要輸入額外的電力以補償損失的發電量。

9. 大約下午二時十四分，FE 的操作人員並沒有察覺其主系統控制室的警報及數據記錄系統因電腦軟件故障而停止操作。因此並未注意到電力系統的任何變化。FE 和附近區域的可靠性協調機構³：中西部獨立

² 發電機勵磁系統的一個主要功能是保持發電機輸出終端的電壓平穩。在這次事故中，Eastlake 的第五號發電機組因電壓下降，在嘗試提升電壓時令勵磁系統的電流量增加，但在工作小組的報告中並未提及為什麼會造成超載並導致跳掣。

³ 可靠性協調機構的主要職能是為區內電力系統作出可靠性評估及協調緊急事故時的運作。

系統營運機構（MISO）的系統分析工具，亦因缺乏鄰近地區的實時數據而失效。結果，有關操作人員在缺乏電力系統資訊的情況下，未能對系統波動或緊急事故採取相應的矯正措施。

事故最初階段

10. 下午三時零五分，FE 在俄亥俄州北部其中一條三百四十五千伏的輸電線因觸及樹木而跳掣⁴，因而增加了俄亥俄州北部以及中部另外兩條主要三百四十五千伏輸電線的負荷。這兩條輸電線其後分別於下午三時三十二分和三時四十一分也因觸及樹木而跳掣。之後，更多的輸電線由於超載而跳掣。最終於下午四時零六分，令到從俄亥俄州東南部至俄亥俄州北部的三百四十五千伏輸電線全面癱瘓，進而觸發了骨牌效應式的停電事故。

骨牌效應階段

11. 三百四十五千伏輸電線路的癱瘓，導致 FE 輸入的電力需要取道其他路線，因而給鄰近地區包括密歇根州東部在內帶來了巨大而無法承受的負擔。隨之而來的負荷超載及頻率／電壓波動，使保護裝置自動操作而關閉了俄亥俄州北部餘下的輸電線路及發電機組，因而引發了鄰近電力系統骨牌效應式的電力中斷。在大約七分鐘之內，停電從俄亥俄州北部及密歇根州東部擴大到美國東北部，直至加拿大的安大略省。

調查結果

12. 工作小組找出造成停電事故的四個主要原因：

- (a) FE 和它的 RC (the East Central Area Reliability Coordination Agreement 東中部地區可靠性協調協議) 沒有充份評估及了解 FE 系統的不足，特別是有關地區的電壓不穩定性及脆弱性。FE 沒有按適當的電壓標準來操作其系統；

⁴ 當流過輸電線的電流增加時，它會使輸電線變得更熱。輸電線的金屬導線受熱膨脹並開始下垂。若導線附近有樹木的話，它們之間的距離會減少。所以樹木管理對所有經營架空輸電線的電力公司來說是極為關鍵的。如果樹木長得太高，得不到及時修剪，則可能觸及電線或產生跳火，造成短路故障。

- (b) FE 對處境的了解意識不夠充份。FE 未能認清及了解其系統轉差的情況；
- (c) FE 沒有及時地處理在其輸電線範圍內樹木生長過盛的情況；以及
- (d) 聯網可靠性機構沒有提供有效即時的診斷支援。

調查建議

13. 工作小組提出了一些關於防止未來停電或盡量縮小可能停電範圍的建議。這些建議強調對可靠性標準的詳盡程度、監察、培訓及執行。具體內容如下：

- (a) 政府機構和相關組織應對高可靠性標準作出承擔。當可靠性標準和商業目標之間出現衝突時，可靠性應獲優先對待；
- (b) 維持可靠性需要持續的投資和營運開支，這些投資和開支受不同誘因驅使。在規管的市場下，其誘因是規管制度對成本收回所提供的保證；在開放的市場下，其誘因是盈利的考慮；
- (c) 可否成功落實建議取決於對運作表現的監督，管理者的問責，以及標準的執行；以及
- (d) 雖然停電不是由惡意行為造成，但要提高可靠性，一些與保安相關的行動是必要的。

觀察要點

14. 事故顯示，尤其是像北美這樣廣泛聯網的電力系統，當主要輸電線路或發電設施發生故障時，其影響不祇局限於當地，而是有可能擴展到廣大的聯網地區。聯網電力系統有許多優點，例如促進不同的系統之間互相協助和進行具經濟效益的電力交易，以達到長期的可靠性和經濟效益。但是，聯網也有其固有的風險。當一個系統出現電力波動時，可能會通過聯網波及其他系統。當建立聯網時，需要認真的評估及處理有關得失。

15. 大規模停電事故是罕見的，而且沒有相同的事故。導致事故的原因各不相同，可以涉及人為的因素、系統結構、負荷／發電平衡、電力系統特徵和狀態、及保護設備的效能等。在電力系統規劃、設計和運行各個範疇上，有效的協調和溝通，以及依照完善而慣用的運行方式，來控制和盡量減少電力波動，都是必要的，而且對聯網系統尤為重要。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

I have lived in Hong Kong for over 18 years and in that time I have seen the quality of our air deteriorate dramatically. I live in Pok Fu Lam, and we can seldom see Lantau. I work in Central, Exchange Square, and we can seldom see Kowloon side. This is completely unacceptable and we must do everything we can here in Hong Kong to make a difference.

So: let's not just focus on the power companies - let's get control of air conditioning (ie set limits on temperatures, like they do in China), get diesel off the roads, take polluters off the roads, and take firm control of those processes that put the most particulates etc into the air. Just do it.

Further, as a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 我要清新空氣
☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Renia Lopez

機場管理局部分私營化 公眾諮詢報告

目錄

第 1 部分：引言（第 1 段）

第 2 部分：背景（第 2-3 段）

第 3 部分：公眾諮詢程序（第 4-6 段）

第 4 部分：公眾反應（第 7-8 段）

第 5 部分：主要事項 1-6（第 9-37 段）

第 6 部分：總結（第 38-43 段）

第 1 部分：引言

1. 本文匯報政府在二零零四年十一月至二零零五年五月間向公眾諮詢機場管理局(機管局)部分私營化建議的結果。

第 2 部分：背景

2. 二零零三年八月六日,政府宣布就建議的機管局私營化計劃展開準備工作。推行建議的私營化計劃的主要目標在加強機管局的商業運作規範,以提升效率,發掘更多商機。此外,建議的私營化計劃可為本地金融市場增添一隻優質公司股票,也可以讓香港市民擁有這個成功運作的機場的股份。中期來說,出售機管局的股份可為政府帶來資本收益。

3. 其後,政府聘請一家投資銀行擔任財務顧問,研究私營化建議。二零零四年二月,政府經考慮財務顧問的建議及有關人士的意見後,宣布打算以公開招股上市方式進行私營化計劃,以及會就一些具體事項再進行諮詢。為準備建議的部分私營化計劃,當局修訂了法例,授權機管局將 60 億元股本資金歸還政府,藉以優化機管局的資本結構和降低加權平均資本成本。

第 3 部分：公眾諮詢程序

4. 完成資本重組工作後，政府在二零零四年十一月二十二日發表機管局部分私營化諮詢文件，徵詢市民對有關機管局部分私營化後的規管及體制事宜的意見。諮詢期原定於二零零五年二月二十八日結束，其後延長至同年五月三十一日，讓市民有更多時間考慮所涉事項並提出意見。

5. 在諮詢期間，諮詢文件印備文本供市民索閱，也上載互聯網供市民瀏覽。諮詢文件和摘要共派發超過 4 500 份，除了在 20 個民政事務總署諮詢服務中心派發外，也有應要求直接郵寄給機構或市民。諮詢文件和摘要的網頁錄得超過 2 500 次瀏覽次數。

6. 是次諮詢程序在報章雜誌及電子媒體均廣泛報道。當局曾與航空諮詢委員會、學者、工會及航空公司代表等團體舉行諮詢會議。二零零四年十一月二十二日及二零零五年一月三十一日，當局兩度派員出席立法會經濟事務委員會會議，向議員介紹諮詢文件內容並聽取他們的意見。

第 4 部分：公眾反應

7. 我們總共收到 69 份意見書，提出意見的人士來自社會各界，包括政黨、航空公司、工商機構、工會、商業及金融機構，另外也有學者和個人。除要求保密的意見外，所有意見均可在經濟發展及勞工局網址瀏覽。

8. 收到的意見可歸納為幾個主要事項，摘要如下。這些摘要應與諮詢文件¹一併閱讀。關於各主要事項的背景，諮詢文件載有更詳細的資料。

第 5 部分：主要事項

主要事項 1：私營化的理據

背景

政府推行機管局部分私營化計劃的主要目標如下：

- 加強機場的商業運作規範，提升效率，發掘更多商機；
- 方便機管局從資本市場融資；

¹ 查閱諮詢文件可到 www.edlb.gov.hk/edb/chi/papers/cdoc/。

- 為本地金融市場注入一優質股票，使市場更為多元化；
- 機管局乃優良經營的公司，且具強勁增長潛力，私營化能提供機會，讓香港市民參與及分享其發展成果；以及
- 獲取私營化所帶來的收益，從而改善政府中短期的財政狀況。

私營化配合政府“大市場、小政府”的理念。

摘要

9. 91% 的回應者就此事項提出意見。

10. 回應者的意見不一，贊成和反對私營化建議的意見皆甚為強烈。

11. 約 30% 的回應者贊成機管局私營化，原因是私營化：

- 為全球趨勢；
- 能將商業運作規範引入機管局；
- 能提升機管局的表現；
- 能提高機場的效率及競爭力；
- 方便機管局從資本市場融資；
- 能讓廣大市民藉成為機管局股東而直接受惠；以及

- 有助紓減政府的財赤壓力。

12. 約 40% 的回應者明確反對私營化計劃，所持理由主要如下：

- 將機管局私營化欠缺強而有力的理據；
- 私營化後的機管局會變成以盈利掛帥，削弱香港國際機場的競爭力；
- 機管局股東與香港市民之間可能存在利益衝突；
- 機管局的業務狀況發展尚未夠成熟，可能會導致機場費用增加或政府的寶貴資產被賤賣；
- 擔心未能履行《基本法》內有關機場管理的條文；
- 對機場員工的影響；以及
- 機場島的土地用途問題。

13. 至於其他意見，有些提議將建議的私營化計劃押後，直至機管局的業務狀況發展更為成熟才再推行。也有些回應沒有明確表示支持還是反對機管局私營化。

主要事項 2：政府與私營化後的機管局之間的關係

背景

香港國際機場是香港最重要的資產之一。機場能否暢順有效

運作，對本港經濟有舉足輕重的影響。在推展私營化計劃時，我們同意有必要訂立適當的機制，確保股東利益和市民利益之間一旦出現衝突時，能在兩者間取得良好的平衡。因此，我們在諮詢文件中建議採取一系列的措施，例如政府有權委任增補成員進入董事會以代表政府或公眾利益、授權政府向私營化後的機管局索取資料等。

摘要

14. 35% 的回應者就此事項提出意見。

15. 幾乎所有就此事項提出意見的人士贊成政府應獲賦予足夠權力，在機管局私營化後規管新公司，以保障公眾利益。不少人士強調有必要在股東與市民的利益之間取得適當平衡。

16. 有些回應者擔心，機管局私營化後會變成以利潤掛帥，可能會作出有損公眾利益的決定。

17. 有數名回應者認為，在私營化後，政府將難以規管機管局。多名回應者則建議，當局應設立規管機構監管私營化後的機管局的運作。

18. 在諮詢文件相關部分中所建議的具體措施，大致上得到就有關措施提出意見人士接納。

主要事項 3：機管局的業務狀況及估值

背景

在公開招股前，機管局須向有意投資者證明可於一段合理時間內取得商業回報。由於機場的初期資本投資龐大，機場的盈利能力相對於政府超過307億元股本而言，實在微不足道。

目前的選擇是，應在未來數年增加機場費用，設法使納稅人在機場的投資得以保本，或是應把機場費用維持在較具競爭力的水平，但要承擔在招股時取得較低估值的風險，因而令納稅人投入的資金出現虧損。

摘要

19. 44%的回應者就此事項提出意見。

20. 絕大多數意見強調，鑑於區內競爭激烈，因此必須維持香港國際機場的競爭力。而對於應否增加機場費用使機場的投資得以保本的問題，則意見紛紜。

21. 部分回應者反對增加機場費用，當中有數名更要求將費用調低。

22. 很多回應者同意應確保在公開招股時取得理想估值，但當中有些人卻同時反對增加機場費用。

23. 有些回應者認為，合理地增加機場費用，並不會影響香港國際機場的競爭力。

24. 很多回應者認為，隨着經濟復蘇，機場的交通增長應會在不久將來更為強勁，令其財政狀況因而得以提升。他們建議應將私營化計劃押後，直至機管局無需增加機場費用也取得理想業績，足以使其估值定為相當於政府投入的股本水平，然後才推行私營化計劃。

主要事項 4：經濟規管

背景

現時，機管局享有釐訂機場費用的自主權，惟必須經行政長官會同行政會議事先批准，以確保符合在民航方面的國際義務。

政府認為理想的做法，是設立更具透明度的規管架構以釐訂機場費用。但在設計規管架構時，我們須保留足夠的商業彈性和

誘因，以提高效率，並容許私營化後的機管局賺取合理回報。
諮詢文件就該等經濟規管架構的設計提出了若干具體建議。

摘要

25. 35% 的回應者就此事項提出意見。

26. 多數回應者贊成設立經濟規管架構，但有數名回應者認為毋須規管機場費用，因為我們應讓市場決定費用的水平。

27. 就此事項發表意見的回應者，大多贊同規管架構應要公平、明確和具透明度，並採用用者自付的原則。

28. 對於機管局非航空活動應否納入規管架構一事，回應者的意見分歧。一般而言，航空公司和其相關人士及部分學者贊成採用“單一帳目”方法；而與機場有關的組織、部分學者、個人和機構則屬意“雙重帳目”安排。部分航空公司建議，在計算私營化後的機管局的回報率，以及分攤其資產和成本時，應顧及機場為社會帶來的其他好處，如“策略價值”和“國家利益”。

主要事項 5：土地用途、競爭及業務範圍

背景

有些人認為私營化後的機管局有壟斷地位，亦有大量土地可供運用，所以關注到它在某些商業活動擁有極大的優勢，並可能藉此作出一些反競爭行為。

政府在諮詢文件中建議私營化後的機管局繼續持有及使用機場島的土地，令其能夠靈活規劃和發展所需要的設施，以支持機場運作，惟須受有關機場島土地用途的現行管制措施規管。

政府並於諮詢文件中建議加入法律條文，在土地用途及業務範圍方面禁止新公司進行反競爭行為或濫用其市場優勢。

摘要

29. 35% 的回應者就此事項提出意見。

30. 就此事項發表意見的回應者，多數贊成政府應在商業彈性與禁止私營化後的機管局進行反競爭行為的需要之間取得平衡。

31. 有數名回應者促請政府避免對私營化後的機管局的經濟活動施加過多限制或作出干預。

32. 多名回應者建議機管局在私營化前應把土地歸還政府，又如機管局並非為准許的目的使用土地，便須繳付地價。

主要事項 6：對機場內商戶和員工的影響

背景

機場業界和勞工組織代表指出，建議中的私營化計劃可能對在機場營運的公司和員工福利帶來負面影響。他們擔心私營化後的機管局將變得以盈利掛帥，剝削他們。

機管局現時只有大約900名員工，架構已非常精簡。機管局已確認並無計劃因私營化而裁減任何員工或削減員工待遇。

至於機場專營商和承包商的僱員，他們的就業與待遇應不會受建議中的私營化計劃影響，詳細原因已載於諮詢文件內。

摘要

33. 17% 的回應者就此事項提出意見。

34. 回應者普遍相信機管局私營化不會對機場僱員和工人的福利帶來負面影響，因為機管局現時已按照審慎商業原則運作。

35. 不過，各工會擔心私營化後的機管局會為爭取商業利益而置員工福利於不顧。有工會明確要求委任勞工代表為私營化後的機管局的董事會成員。

36. 部分回應者強調機場員工的待遇和安全必須得到充分保障，才可將機管局私營化。

其他意見

37. 除了對上述主要事項的回應外，回應者亦有就私營化的不同安排、機管局的運作以及提高效率和利潤的途徑等事宜提出意見。所提出的要點包括：

- 政府應考慮機管局進行私營化的其他方法，例如出售或長期租賃資產；
- 為免可能在法律上受到質疑，政府應設法確保公開招股上市在法律方面並無問題；

- 政府應出售更多股份，並把大部分股份售予香港市民；
- 私營化後的機管局應着眼於推動香港作為國際機場的長遠利益，及提升安全和服務標準；
- 機管局應利用飛機升降時段分配等活動積極開拓收入來源；以及
- 機管局應透過重組以提高效率。

第 6 部分：總結

38. 諮詢文件發表之後，得到市民就有關機管局部分私營化後的規管及體制事宜提出多方面意見。共計 69 份的回應涵蓋社會不同層面的廣泛意見。

39. 就機管局應否私營化此一主要問題而言，政府的建議仍未能得到大多數回應者的支持。

40. 在反對建議的回應者當中，雖然很多人並非抗拒私營化，但他們對多項事宜均表示關注及有所保留。當中包括保持香港國際機場的競爭力、避免大幅調高機場費用、保障機場員工的福利、防止私營化後的機管局與其他公司進行不公平競爭，以及政府保留足夠的權力以確保私營化後的機管局在運作上會顧及公眾利益。

41. 至於私營化的支持者，他們的意見亦甚為強烈。但他們之中，也有人關注到實行建議的時間安排，認為有必要再加斟酌。

42. 政府認同上述的憂慮皆有其理由，在機管局進行私營化前，應妥為處理。當局在繼續進行私營化時，會擬備詳細的建議及進一步徵詢有關人士的意見。

43. 最後，本局謹向是次諮詢工作中所有參與並提供寶貴建議及意見的機構和有關人士致以謝忱。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

My Views On Electricity Market Consultation Stage II.doc

現行電力行業規管制度

香港以管制計劃協議的模式規管香港電力公司的業務。協議沿用至今超過40年，期間被定期檢討和修訂，以配合社會的需要。現行制度讓市民長期享用可靠程度高達99.99%的供電，及相比其他國際城市相宜的電價；又給電力公司的股東獲得長期穩定的合理投資回報；更使政府有效地私營化電力供應，減少納稅人的負擔。這套制度為香港注入世界級供電設備和服務，支持香港的高速都市建設及商業發展，及長期的穩定和繁榮創造對市民、投資者及政府的三贏局面。

為新電力供應源準備

新的電力供應來源主要分為：包括風能，太陽能等的可再生能源；及來自內地的電力供應。可再生能源發展是有其重要性的，惟在技術和經濟層面上面對很多制肘，暫未能成大器。鑑於內地電力持續短缺，以及兩地在技術系統、法制、環保標準及商業運作等的差距，香港在中短期而言，實難與南中國建立一個區域性開放市場。受到本地市場規模細小及獨特條件限制，本港亦未必具備競爭式市場所需的條件。

縮短協議年期

政府建議新協議從現在協議15年的年期縮短至10年，期滿時可續期多五年。理由是預留彈性，容許適當的改動。然而10年的協議年期未必能反映電力行業具有高度資本密集、投資項目籌備需時、資產壽命長達30年或以上、長期的燃料供應合約年期亦長達20年以上的特質，增加回報風險及窒礙投資。政府這10年加5年的建議其實也理解到15年的實際需要。政府為何多此一舉，製造不必要的不明朗因素。

准許回報率

政府建議准許利潤按照不同資產類別，調低至固定資產淨值7至11%。當中可再生能源基建設施可獲最高的11%，發電和輸配電資產分別為10%和9%，而減排設施是最低的7%。然而政府在諮詢文件中，卻沒有清楚交代如何計算建議的准許回報率。也沒有評估建議的回報水平是否能反映電力行業的基本特質及電力公司所需承擔的風險。若果不將回報釐定在適當水平，公眾便須承受投資不足所帶來的風險，最終會為社會及經濟發展帶來沉重代價。而投資不足的問題更需要長時間才能修正，直接影響供電的質素，我們絕不能短視。此外，最為人感到大惑不解的是政府說為了減輕由用者承擔減排裝置的開支，建議一個較低的投資回報率。這實有違「用者自負」原則。

環保規管須配合能源政策

政府在沒有考慮電力公司現存的減排能力下，建議大幅收緊排放標準及引入罰則。然而政府暫時還未有清晰的多元化燃料，如核能、燃煤、天然氣等組合的能源政策，確保香港擁有穩定的燃料供應及互相配合的環保政策。因此在缺乏清晰及互相配合的能源及環保政策下，電力公司將無所適從，較難制定有意義的長遠發展計劃。這不但會窒礙環保投資及扭曲投資決定，亦可能由於胡亂投資而令電費C升，削弱電力行業的持續發展，犧牲社會的長遠利益。

慎防變為三輸之局

現存的兩家電力公司是香港歷史悠久的上市公司，資產值約一千二百億港元，僱用大批包括工程師及技術員在內的員工，他們的成功是香港的驕傲，他們的失敗或放

緩發展亦會對香港的經濟及就業市場有很大的影響。新建議不能對此有所疏忽。建議須兼顧各方長遠利益，當中包括盡量減輕市民的電費負擔、穩定可靠及安全的電力供應、合理的投資回報、合乎成本效益、公平的開放市場、環保能源及經濟政策的協調等，並以香港電力市場的長遠健康發展為重，避免弄出市民、投資者及政府的三輸局面。

回應政府的諮詢，我對未來電力市場發展第二階段公眾諮詢的總結以下：

協議年期維持十五年

電力行業涉及很長的投資年期及合約協議（例如液化天然氣合約往往長達二十五年），故此我相信必須為電力投資者，提供足夠長度的協議年期保障，令到投資者樂意繼續投資。鑑於電力行業一般資產的壽命達三十至三十五年，投資在首八或九年仍屬負增長的回報，故此我認為只得十年的協議年期實在太短及不能接受。

准許回報須足以吸引投資

我認為，政府建議的准許回報太低，實不足以吸引電力行業所需的龐大而長遠的投資。由於電力公司需要面對業內特定的風險，所以准許回報率要足以抵銷當中的風險及挑戰。

摒棄資產分類

建議中的四項資產分類回報水平並不合邏輯，只會令計算回報的方法更複雜，更官僚及增加行政費用，令到改善空氣質素的目標適得其反。我認為現時的回報統一水平計算方法既直接又簡單，應該予以保留。

既然無論利用可再生能源或化石燃料產生的電力及相關的機會成本和資金成本都一樣，回報率自然亦應一致。

減排罰則須合情理

我認為建議中將准許回報與減排表現掛的減排罰則機制不能接受。對投資者而言，投資回報是要彌補資金成本及機會成本，實不應與減排目標扯上關係。況且政府現時已有法例懲罰電力公司減排超標，這建議等同「雙重懲罰」。

電力行業涉及長遠的投資，在現時缺乏一個二零零八年後清晰規管架構的情況下，要求電力公司達到政府單方面訂定的減排目標，我認為相當困難。

保留現時電價調整機制

我認為建議中指電價調整必須先獲政府批准是不合理的，因為這樣只會令電價調整機制蒙受政治壓力。如果電力公司在雙邊協議下仍不能保證收回成本及准許回報，管制協議的框架將肯定會被徹底破壞，其作用亦會變得蕩然無存。

These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. Hong Kong is a beautiful place to bring up children, however with the ongoing pollution and air quality it's clear that a child's health will become more and more effected by the pollution.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Richard Casey

Fax Number 2868 4679

31 March 2006

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road, Central,
Hong Kong

Dear Sirs/Madams,

Consultation Paper on Future Development of the Electricity Market in Hong Kong
Stage 2 Consultation

The paper has identified well the major categories needed for the future direction of the market, that safety, environmental and economic matters should be regulated and that effective regulatory institutions should be maintained. However, various elements put forward in the consultative paper could be improved so that the paper could better deliver the EDLB's declared objectives, as I understand from the statements of Mr Stephen Ip yesterday, for an affordable electricity price, reduced power station emissions and a reasonable return on investment, which together are required for the wellbeing of Hong Kong.

Environmental regulation

The paper has identified targets for emissions reduction by 2010. Adopting "additional measures, under the economic regulatory arrangements, to minimize the costs to consumers in meeting the emission reduction target" by, for example, requiring that the permitted rate of return be reduced if the emission target is not met is incomplete as a policy. The government should produce plans on how these targets can be realistically and reasonably met, and (even though it may be beyond the scope of the present consultation) do its part in enabling the supply of cleaner fuels such as LNG for Hong Kong consumption for a more complete and coherent approach.

The period of economic regulation

The proposed 10 year period of regulation, extendable by 5 years, is too short. It does not encourage asset replacement which requires a much longer duration for prudent planning, with the consequence of inducing the investor to recoup investment early or reduce asset investment. The former does not offer a reasonable electricity price and the latter does not lead to long term reliability, neither of which will benefit Hong Kong. The period should be 15 years, extendable for 5 years, to commensurate with the life of the bulk of the assets.

Incentive for investment

The proposed different rates of return of between 7%-11%, dependent on asset types, are a significant reduction on shareholder value. Should these drastic, new figures be implemented, we shall have to find out as a community from ourselves through the stock market on how we shall react to the much reduced return at the present electricity providers which are basically publicly listed companies, to see if the adopted figures represent a correct balance between a reasonable consumer burden and an adequate incentive to support an asset investment programme necessary to maintain supply reliability, which serves the public. As a more prudent measure, the rates of return should be better set in phases of say 5 years, migrating in steps from the present 13.5% tentatively to say 11%, though be included in a review at the end of each phase to see if the balance is correct.

I suggest that we should include in elements such as those indicated above to handle better the totality of the issue, so that we may develop a balanced, sustainable regime for electricity supply, which I believe, is indispensable for a modern community. I wish you every success in your effort for Hong Kong.

Yours faithfully,

Richard Fung

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Re: Government's Stage II Consultation Paper on Future Development of Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Dear Sir/Madam,

With reference to **Government's Stage II Consultation Paper on Future Development of Electricity Market in Hong Kong**, I would like to express my points of view based on the following key proposals in the Paper:

- **Bilateral agreement type proposed to continue - AGREE**
- **Asset based return to continue - AGREE**
- **Revise tariff setting mechanism - DISAGREE** because investment incentive is essential to maintain reliable electricity supply to customers.
- **Reduce return level, differential return - DISAGREE** because it will lead to distorted investment decisions.
- **Shorten duration of agreement - DISAGREE** because it will increase uncertainties in long-term investments and fuel supply commitments on capially-intensive power industry.
- **Introduce performance based penalty - DISAGREE** because there is no clear policy direction on fuel mix and also environmental regulations have to be consistent with energy policy.

Your sincerely,
Richard Kwok

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

I have been asthmatic for 24 years. I recently returned to Hong Kong after 18 months overseas; during that time, I visited 19 other countries, many of them (including India and Brazil) places with a reputation for severe pollution. However, during those 18 months, I was almost completely free of asthma symptoms. Since returning to Hong Kong in December, I have been consistently short of breath, wheezing, short of energy and generally unwell. I can see what's causing this - from my home, on the ferry journey to work (I live on Lamma island), and from the window of my office in Wan Chai. It's the disgusting quality of Hong Kong's air.

I love this city and enjoy living here, but the appalling air is affecting my quality of life. As an expat, I have the option of leaving, something I believe more and more people will begin to do if the environment of the city doesn't improve. But for many Hong Kong natives, they have no choice but to live their lives and raise their children in this choking atmosphere.

Please don't jeopardise Hong Kong's future; please do something about this. There's nothing more important than the air we breathe.

Yours,

Richard Lord.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

24/03/2006 13:10

Dear Sirs,

I was pleased to see the recent SCMP editorial, letters and articles on the recent high levels of pollution in Hong Kong. I had read runner Mark Williams' thoughts on moving back to the clean air of New Zealand and hoped that it would stimulate further comment.

I have lived with my wife (and more recently 2 young children) for over 10 years in Pok Fu Lam. What was once a beautiful sea view to Lantau is now, almost daily, a murky fog - 4 days out of 7 we cannot even see to Green Island - barely a mile away. My eldest daughter often comments that she can no longer see the Disney Fireworks in the distance at night.

We have just spent nearly \$20,000 on Air purifiers, in the hope that these might ease the constant coughs and ,currently mild, but ongoing breathing problems of our young children. I will buy a hybrid car when they become more readily available. I am open minded to make whatever changes are needed to reduce the gas emissions that our normal family can cause.

I understand that combating pollution is a top priority for the Government but fail to see that anything is really changing. I think that government and environmental agencies would admit that most of our pollution is coming from the increased industrial output of Southern China? Would it be asking too much for our Government to lobby Beijing more effectively to put in place better emissions controls on these utility providers and factories?

All I can say at the moment is that not much seems to be changing. Doubtless this is a big subject, spanning regions, countries and continents. Hong Kong does seem however to be at the forefront of many troubles. What are we going to do, and soon, to improve matters, when they plainly are just getting worse?

Yours faithfully,

Richard Walker

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 電力市場未來發展第二階段諮詢意見(Revised)

☐ Urgent ☐ Return Receipt

本人就電力市場未來發展第二階段諮詢有以下意見:

1. 准許利潤若調低至-7-11%似乎太低，並不比張投資存放在銀行吸引，恐怕會減低兩電力公司的投資意慾，從而影響長遠的電力發展，對供電的隱定性有一定的影響。
2. 政府新建議將協議年期由15年縮短至10年並不適當，因投資發展需時，資產壽命也達30年或以上。故協議年期太短，難令兩電力公司安心投資，很多新的發展項目將會停了下來，這會影響電力市場的發展。

最後本人認為政府應給與兩電力公司合理的准許利潤和保持現有的協議年期，以免影響本港電力市場的健康發展。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Consultation Paper for Electricity Market (Stage II)

☐ Urgent ☐ Return Receipt

Dear sirs,

I am writing to reflect my views on the captioned issue:

- the reliable electricity supplies in HK is one of the foundation stone to the success of Hong Kong since the past ten decades;
- the recent environmental issue in Hong Kong is not the sole responsible of the utilities company but also the industries in the nearby provinces.

I do agree to review the rules of game but it needs to have a better consultation and the Government needs to give a clear framework for the new model.

Best regards,

Ricky Choy

ricky fong

March 20, 2005

Dear Sir,

Consultation on Electricity Market – Stage II

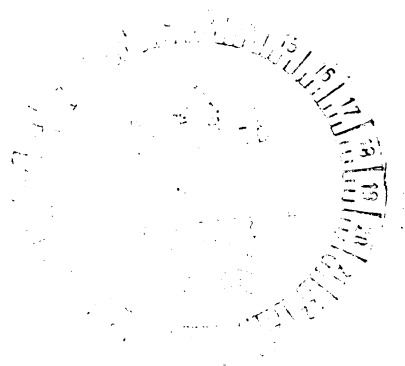

My comments are as follows:

- Clean energy requires heavy investment, it is therefore not reasonable to limit the return rate of the electricity company. Instead, we should encourage the electricity to invest more to reduce emission by allowing them a higher return rate.
- The new regime scheme should be of at least 10 years; otherwise, the loaning bodies may not grant a favorable interest rate to the electricity companies on implementing the new infrastructures, such as, the emission reduction facilities. The additional cost for making the loan will eventually be passed to the end-users, the Hong Kong Citizens, which is undesirable
- I personally do NOT support the de-regulation of the electricity market, as this may have tremendous impact on the supply reliability as have been observed in countries with deregulated electricity market.

Yours sincerely,

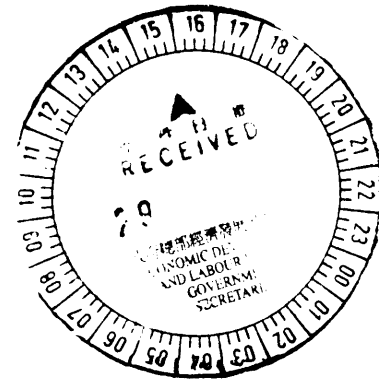

Ricky Hung

23rd March, 2006

Economic Development and Labour Bureau
2/F, Central Government Offices,
Main and East Wings,
Lower Albert Road, Central,
Hong Kong

Dear Sir/Madam,

Electricity Market in Hong Kong – Stage II Consultation

In view of the Consultation Paper on Future Development of the Electricity Market in Hong Kong – Stage II Consultation, I wish to submit that the introduction of new players in the electricity market, practice of interconnection and drastic cut down of rates of return do not support economic growth as well as improved public living standards based on the perspectives of a) Reliability and Safety Requirements, b) Reasonable Tariffs, c) Environmental Issues and d) Social Impacts.

The introduction of new electricity suppliers and increased interconnections put forth in the Stage II Consultation for which I trust minimal attention will take place upon public users compared to bulk demand users. For instance, the privilege of enjoying cost effective facilities will only be posted on major clients such the MTR, Disneyland, KCRC, and others. Thereon, it is likely that consumers will not enjoy full benefits from these new policies. On the contrary, the existing power companies will be obligated to serve the lesser demand users with relatively higher productive costs.

Tariffs are comparatively fair and inexpensive given Hong Kong is not a state-owned nation and we are deemed as mid-range among major cities. Electricity only consumes 2% of our total household expenditure and income putting in account the rise of electricity price is relatively low throughout the decades. However, the increased of interconnected networks may in turn invite pressure on the rise of tariffs due to unnecessary overheads.

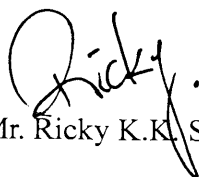

The power industry is capital intensive requiring billions of dollars for investment, and the payback period on investment may take 30 to 35 years. Therefore, the shortened of terms may result higher investments risks or release of investments. In the short run, the electricity supplies may not necessarily affect if decline the investment on new equipments or infrastructure of power supplies, but it is not sufficient for long term period.

With reference to the environmental aspects, the issue of whether electric supply and operational works derived from the Mainland are able to protect the environment may still be at stake. In factual basis, the Guangdong province is currently producing serious air pollution due to the use of old style and low efficiency generators. Unlike the existing power companies, they have been making huge investments to safeguard a healthy environment such as adoption of more efficient and environmental-friendly technologies, promotion of energy efficiency and conservation and wider use of renewable energy.

Interconnection and deregulation can deliver more harm than good to social impacts. They cause volatile prices and deliver negative effects to share investors and escalating customer complaints due to poor electricity supply. High costs for deregulating system and drastic cutback on local job opportunities are also foreseen products of such implications.

The reliability and security of electric supply enjoyed by Hong Kong consumers reflects the success of the current scheme of control both in assuring the timely availability of long term investment capital necessary to sustain it, as well as encouraging a prudent operating and cost structure to deliver it. In short, I do not project the need to review and replace the existing SCAs promote significant benefits to general public and the commercial users.

Best regards,

Mr. Ricky K.K. So

香港中環
下亞厘畢道
中區政府合署中及東座二樓
經濟發展及勞工局局長
葉澍堃先生

葉澍堃局長：

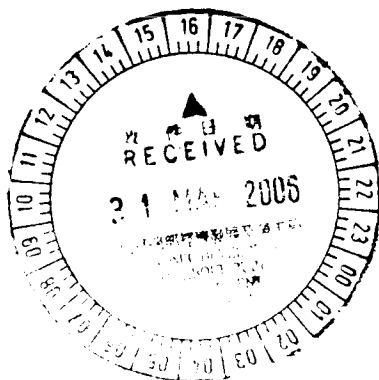

香港電力市場第二階段諮詢

我作為香港市民，得悉政府為上述課題展開諮詢工作，我現提出以下意見。盼望政府能認真考慮，作公允之卓裁。

電力行業的特質是投資週期長及需要作出大量投資。如果協議年期太短，投資者未必能在年期內收回資金及回報，投資者將不願意繼續投資，因此而令電力基建投資不足，破壞電力供應的穩定性。所以我要求維持現狀。

現時的 13.5% 准許回報率已在過去幾十年的實踐中充分證明是可行及成功的，社會各方利益得以平衡。一旦落實下調回報率的建議，會打擊投資者的意欲而增加停電的風險。

電力公司是有權根據政府批准的投資項目賺取准許回報，若容許政府有權否決電費調整，電力公司的股東將難以保障可以收回成本及准許利潤，因此增加了投資者風險。政府此建議會干預私人企業運作，故這個建議不宜被採納。

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

ricky

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

At last, it is such a hearbreaker to the the air condition in Hong Kong getting worst and worst. It will directly affect the impression of tourists. Futhermore, it is a long term problem that the government should be discussed.

敬啓者：

就電力市場未來發展的第二階段諮詢，本人作為一個投資者有以下意見：

政府建議將管制計劃協議的年期訂為十年，期滿時可由政府決定是否續期五年，這等同把基本的十五年期縮短至十年，令協議年期縮短達三分之一，這建議無法配合電力行業投資的資產壽命，因為電力市場的投資期長，一般資產壽命為三十至三十五年。如果將年期縮短，就會令到投資風險顯著提高，打擊投資意欲。到時弄致電力基建投資無人問津，電力供應的表現還會像現時般穩定、安全和有效率嗎？

所以我認為必須保留足夠長度的協議年期，令投資者有足夠誘因繼續投資。

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Rita Vannithone

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Tel.: (852) 2544 2056 Fax.: (852) 2545 1967 Web Site: www.shine-success.com.hk

25th March 2006

Economic Development and Labour Bureau,
2/F., Central Government Office,
Main and East Wing, Lower Albert Road,
Central, Hong Kong.

Dear Sirs,

Future Development of the Electricity Market in Hong Kong
Stage II Consultation

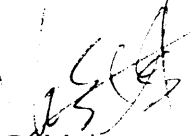

I had run business in Hong Kong over twenty years and I would like to express my view on this issue.

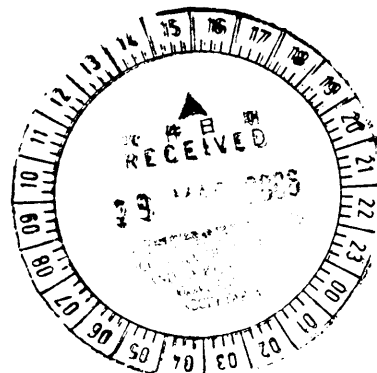

The most important point is to ensure the power companies to maintain the existing excellent supply reliability in Hong Kong. The proposed permit rate of return should have a sufficient high incentive for the power companies. Otherwise, the power companies will reduce their long-term investment in order to maintain the short-term profit for their share holders. In the end, the supply reliability of Hong Kong will gradually decrease. If there is any case of black out incident in the future, the marginal decrease of tariff, if there is any, cannot compensate the business loss due to one such single incident.

For the proposed different rates of return for different assets, the original idea might be good but the end result might be completely different. It would create incentives for power companies to arrangement lateral investment for the most "profitable" parts, not the most important parts. It is not a surprise reaction in the real business world. In the end, the existing high supply reliability will be affected.

I sincerely hope that the Government would carefully consider all factors, particularly the supply reliability, in finalizing the agreement with power companies.

Yours faithfully,

Robbie Kwok

I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: HELP

☐ Urgent ☐ Return Receipt

To: Economic Development and Labor Bureau

It is shameful that the Hong Kong Government put industry be for the health of its citizens

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licenses. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. Demand management must be built into the profits of the company. There must be a mechanism where they profit if they can significantly reduce energy demand. At present they only profit from Increased demand.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

I'd like to add, that as an expat living and working in HK, my decision to stay or leave hinges very much on the air quality. It is the single most important issue for people living in HK, at least, according to the people I speak to. When I first arrived in HK I had chronic throat infections for the first 12 months. Since living back in Australia for a short period, no illness.

Frankly, if the government do nothing about this problem, I will never return to this city, despite how beautiful and exciting it can be at times.

Subject: Comments on Consultation Paper Stage 2

☐ Urgent ☐ Return Receipt

Dear Sirs,

Stage II Consultation - Future Development of the Electricity Market in Hong Kong

I have read your consultation paper with great interest and have the following comments.

I agree with your objective "to ensure that the public can continue to enjoy reliable, safe and efficient energy supplies at reasonable prices, and to minimise the environmental impact caused by the production and use of energy".

As most of us in Hong Kong live and work in high rise buildings, it is extremely important that we continue to have "reliable" energy supplies. I have been stuck in a lift overseas caused by unreliable energy supplies and it was a horrifying experience. Your most important objective should be to ensure that the current level of reliability is maintained.

Everything comes at a price. Cheaper electricity normally comes at the price of lower reliability. "Cleaner" electricity is more expensive - who is going to pay?

You must obtain the power companies' buy-in on your recommendations. If not, the whole system will be in a constant state of uncertainty with the current level of reliability at risk. I don't want to see Hong Kong taxpayers' money wasted on lengthy judicial reviews and other court cases.

I agree that steps should be taken to improve the environment. Government should devise a comprehensive and well delineated plan rather than piecemeal measures targeting power suppliers at the risk of jeopardizing reliability.

Mainland electricity is regarded as being less reliable more "dirty" than Hong Kong's. Helping Mainland power companies to supply Hong Kong will mean lower reliability and production of more dirty power. Owing to their close proximity, this will affect Hong Kong's environment.

The current regime has worked well in the past. Each change that you make means that you are replacing something which has been successful with something which is unproven.

I hope that you find the above useful.

Yours sincerely,

Robert Mew

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Canadian citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;

2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;

3. The investment in renewable energy should earn a higher level of permitted rate of return;

4. The targets and time-table of reduction in coal burning should be set;

5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;

6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

robin

Subject: 反對開放電力市場

☐ Urgent ☐ Return Receipt

31/03/2006 23:39

致 經濟發展及勞工局局長:

本人 反對開放電力市場

本人認為開放電力市場未必對市民有利和電費下調，無疑電力市場開放會對一些商家、工業家或一些用電量大的電力用戶有利，增加他們與電力公司的議價能力，但得益的絕不是我們的小市民，更不是我們住在郊區的市民得益；如果電力市場開放了，因為住在郊區的用戶供電成本高，供電設施的維修保養的次數機會多、費用貴，而且郊區用戶每月的用電量低，成本效益低，到時開放了電力市場電力公司未必願意供電給我們這些郊區小用戶，就算有電力公司肯供電，可能要我們繳付昂貴的工程費用，更可能要付出比市區用戶較貴的電費，供電的穩定性亦令人有疑慮；現在郊區供電設施時常受天氣或人為因素破壞影響供電，今天我們是不需另付維修費用的，開放市場後可能要我們繳交維修費後才恢復供電。

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the development across the border. Whilst criticism has been made of the power companies, I believe they are trying their best. In addition more effort should be made on our own door step. All diesel vehicles and those petrol one emitting black exhaust fumes should be banned. All vehicles with idling engines, the drivers should be fined on the spot heavily. Greater use of green initiatives, such as energy saving light bulbs etc. The Govt should lead by example as they do not use such in their buildings

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air, but not by just targetting the power companies.

諮詢回應(Roger Chan).doc

葉局長：

您好？對於《香港電力市場未來的發展》第二期諮詢文件，本人有如下一些意見和建議：

港府對於兩電所實施的利潤管制有其不足之處，因此藉着該合同文件屆滿之際，廣泛諮詢社會，尋求長遠的改善的空間，並慎重行事，此目的可以理解。諮詢文件期內，見得到社會上存在很多聲音，對兩電進行炮轟和聲討。然則，本人認為，其中不少意見是非理性的、誤導的、對兩電投資者不太公平的，也對長遠香港不利的。探其究是由於過去幾年，本港經濟處於低迷，社會積存很多鬥怨氣。再加上，近年市民不滿本港空氣變差。而世界原材料和能源價格飛漲，及電力需求於經濟逆境期內增長緩慢，電力公司逼終尋求電費加價。故此，政客和環保人仕相對較出位的宣染下，兩電成為一眾之箭靶。

事實上，在港府不願擔起電力供應的責任下，作為私人集團的兩電，承擔投資風險，接受各項監管，整體上表現其實已經相當不錯。其資產增加故然有利增加回報，然則亦為香港帶來世界一流的電力服務和系統穩定性。同時，有助香港經濟發展，並讓我們笑看外國大停電時的混亂情形。而作平衡公眾和投資者利益的港府，必須謹慎檢討對於兩電所實施的利潤管制，不可為變而變，或無視過往利潤管制所帶來的各項好處，例如持續的投資、一流的電網穩定性和可靠性、以及事實並非不可負擔的電費和不算太差環保表現。每個管制模式都、的的聲音，而大改過往簡單但算是有效的管制方案，例如現時所建議的大幅降低兩電資產容許回報率至百分之七至九，並將減少環保上的投資回報減至祇有百分之七，而要求投資者要預期十年後接受可能巨大的市場改變，是太草率而冒險的。

電力要求龐大長遠的投資和人員、設備的非常專業。也不無風險，例如設備的非常性可能事故、燃料和運輸上的大幅波動、法例和政策上可能的改變，不可預期的經濟表現和電力需求變化，借貸利率上的改變，等等。足够的回報水平，可令到兩電大減憂慮，並能承擔長遠的責任和投資於環保。衛圖片，風向和經驗告訴我們，本地大部份空氣污染物，主要源自近年飛速發展的世界工廠---廣東華南地區。本地兩電是最近源頭，故然最易受人指責，為此港府應清楚地鼓勵使用更環保的能源，如更多使用天然氣，發展風能等，適時適當地淘汰或改裝新設備，更大力推動節省使用能源，以期有效減少本地電廠空氣排放。同時，環保需要整個社會的付出，包括可能接受比現時更貴的電費水平。急促的環保护法則要求再加大幅降低的回報水平，並提升投資者風險預期，這等措施不會對現時情況有改善。短期回應社會上要求的可能的少少電費下降，到頭來社會負出和損失會更大而得不償失。

我們的電費是真的很貴嗎？ 我們其它的東西就不貴？ 另外，很多例子告訴我們，部份或完全開放的電力市場不一定成功。再者，與效益、穩定性和環保表現差的內地電網相連接，怕會是安全上害了香港，環保上害了我們的內地同胞。請當局在電力市場檢討這一課題上，能謹重地行事，而不是建基於短期經濟氣氛和非理性以及出位的討論，能够平衡投資者和真實的、長遠的公眾利益。

祝安！

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: We want clean air!
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Roger Lam

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities.

There are two approaches to this problem: both reduce the amount of greenhouse gas pollution caused by electricity generation, and also reduce the amount of electricity used. Hence I recommend:

1. Require our electricity companies to install pollution reduction technologies in their power stations;
2. Investigate the possibility of opening up the energy market, similar to what was done in the State of Victoria, Australia, in order to introduce market competition in the energy market so as to encourage innovations in green energy generation; and
3. Extend the Energy Efficiency Labeling scheme, currently applied to electrical appliances, to new commercial and apartment buildings, so that home buyers can make an informed decision when choosing which home to settle in based on its energy saving qualities.

Of course these should be done with full coordination with the neighbouring Guangdong province.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Sign: Roger So

28 March 2006

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road, Central,
Hong Kong

Dear Sir,

Future Development of the Electricity Market in Hong Kong

With reference to the above subject, I would like to express my views for your reference.

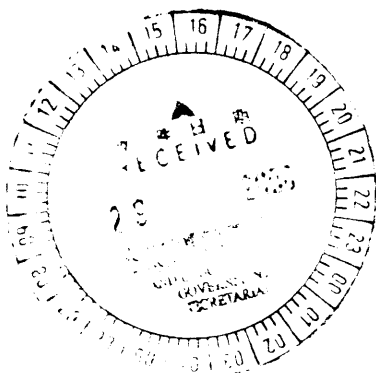

In the Stage II Consultation Paper, it is proposed that the permitted rate of return should be greatly reduced, the regulatory period should be shortened, any tariff adjustments should be approved by the Government and the permitted rate of return should be reduced as punishment for the power companies not achieving the emission caps.

I admire the Government's effort of trying to do the best for the citizens and for the environment of Hong Kong. However, I am afraid that such large number of tough provisions will put an end to further investment in the power industry in Hong Kong. I support the Government that the reliability and safety of electricity supply should be the primary objective in the future development. But only continuous investment in the power industry could maintain a high standard of supply reliability. Therefore, I would like the Government to consider these proposals with caution and to ensure all the citizens could still enjoy a highly reliable power supply.

Yours sincerely,

Roger Yim

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: SOC Consultation - opinions
☐ Urgent ☐ Return Receipt

Dear Sir/Madam:

I am writing to give my opinions as a private citizen on the current and future electricity market situation for Hong Kong.

I was born & raised in Canada and have lived there for 23 years. I moved to Hong Kong in 1993 and after living here for over 13 years, I have the good fortune of being able to compare the two electricity market experiences from a consumer's point of view.

1) Electricity in Hong Kong is not expensive. The average domestic electricity bill in Hong Kong is probably about \$200-\$300 per month (averaged out for summer and winter months). That is a price of a modest dinner for two. We must be rational and put things into perspective.

2) The electricity supply here is RELIABLE. We in Hong Kong have taken this for granted - especially if you've lived overseas (even in developed countries) and know that black-outs are commonplace during extreme weather conditions and supply/demand imbalances. This hasn't happened out of chance - it is a direct result of not only purposeful thinking but from a mechanism which allows power companies to properly plan ahead in full confidence instead of having to always look for areas to cut corners (as do many operators do in all sorts of "open and competitive" markets).

3) Asymmetry of Benefits to Risks: There are criticisms that the SoC mechanism encourages over-investment (I believe this is at the crux of most of the arguments) and that if we open up the electricity market, we will see a reduction in tariff prices. Not only is this not guaranteed (we are seeing tariffs in overseas deregulated markets slowly creep up past the original price levels before deregulation) but we must remember that there is an asymmetry of benefits to risks. What this means is that if slight overinvestment creates a very high reliability of supply and a slight underinvestment creates a less reliable of supply - the risks & costs associated with this lower reliability may far outweigh the savings realised from this underinvestment. One needs not look further than the recent failures in New York, Rome and California to see the impact of electricity interruptions. I would be so bold to say that Hong Kong has even more at stake due to its high density population and reliance on the public transport system.

I do think that the SoC has served Hong Kong well in ensuring an extremely reliable supply of electricity at reasonable prices. However, I also do agree that more must be done for the air quality and environment but a clear policy must be in place to give the power companies a direction to work with. In addition, cleaner energy is a matter of economics. As long as someone is willing to pay and invest, we can improve our air quality. It is naive to think that any single party can and should bear all these costs. We all have a part to play when it comes to a better living environment.

Thank you for your consideration.

Ron CHUNG

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Rono Li

I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

31/03/2006 10:14

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Comments

☐ Urgent

☐ Return Receipt

My comments are as below:

- The return rate of 7% to 11% is very unreasonable and not justified for the electricity supply industry which demands huge capital investment to ensure the supply is sufficient and reliable. A 10% investment return rate is very common in the investment market. It is impossible to attract the investors to invest in the electricity company if the return rate is not more than 10%.
- The different rate of return of different types of investments is very innovative but not practical. It will incur a significant administration cost and complication in accounting, which in return reflects in the tariff. The principle of the investments should be simple, i.e. the higher the amount of investment, the higher the amount of return, regardless its nature and its industry.
- The proposed 10-year contract is too short for an electricity company as the capital investments can be used for 15 years. If a 15-year contract cannot be guaranteed, the electricity company will not make any investment.
- The long-term availability and reliability of supply will be threatened if there is no and insufficient new capital investment. As the major government buildings and financial institutions are located at Hong Kong Island, every second of supply interruption will have a serious consequence which no one can bear the cost. To guarantee long-term availability and a high reliability of the supply, the government should offer a long-term contract, not less than 15 years, and preferably 20 years, and a reasonable return rate, i.e. not less than 10 %.

敬啟者：

本人經詳細閱讀政府所發表的「香港電力市場未來的發展第二階段諮詢文件」後，對政府的建議有以下的意見：-

1. 不贊成任何可能影響香港電力供應可靠和穩定性的建議。
 - a) 如建議投資回報率 7-11%，屬於偏低。
 - b) 如建議協年議期十年，屬於偏短。以上兩建議均未能提供誘因給電力公司作長遠的投資以維持現時世界最高水平之供電可靠性(高達 99.99% 以上)。
- c) 在未能確保新供電源之可靠和穩定性屬有世界最高水平之前，絕不能開放電網予新供電源，以確保不會影響目前供電系統的高可靠性。

2. 政府建議致力將能源生產和使用對環境所造成的影響減至最低。電力公司如未能符合牌照中所指定的排放上限時，政府可向電力公司徵收罰款。但若同時再扣減電力公司的准許回報率，會做成不合理的重複處罰。

3. 不建議採用不同類別的資產有不同的投資回報率的方法，因採用這方法可能會遇到一些不容低估的問題，如界定資產分類的困難和行政費用的增加。

Several doctors I consulted for my daughter's allergies mentioned that kids having these problems have quite a percentage in number due to our air pollution. (Note that I nor my husband did not have any of these allergies.) By standards of a healthy environment, this is not normal. And it is not acceptable to consider a large portion of the kids population to have upper respiratory allergies. This is an indicator that something is wrong in the air. When these kids grow up, consider how HongKong's future citizens will be.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Dear Economic Development and Labour Bureau,

As a long time Hong Kong resident and Hong Kong citizen (who returned from the US), I am growing increasingly concerned about the air pollution, including those caused by power stations.

I urge the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation, as well look at diesel versus gasoline fuel, incentive taxes for electric or hybrid cars, restrictions on cars and trucks with poor emission control, and heavy industrial polluters.

These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

葉樹坤局長:

香港電力市場未來發展諮詢 - 個人意見

就香港電力市場未來的發展, 第二階段諮詢文件中有關利潤的建議本人想表達意見如下。

香港政府與電力公司現有的管制協議制度可讓市民享用可靠程度高達99.99% 的電力供應, 可靠的電力供應對本港的經濟和商業活動甚為重要, 電燈公司為提供可靠及安全的電力供應以配合香港的經濟發展, 作出了龐大而長遠的投資, 若政府將協議年期減至十年, 回報率降至 7-10 %會導致投資不足, 令供電不可靠, 危害經濟。此外, 不同資產, 將回報分類, 會增加風險和打擊投資意欲。若不將回報定在適當水平, 公眾便須承受投資不足所帶來的風險, 最終會為社會及經濟帶來沉重代價, 政府不能忽視。

Subject: 我要清新空氣

☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

Dear Sir/Madam

I wrote in support of the Greenpeace campaign to prioritise clean air in the current review of the future of the Hong Kong electricity market.

As a resident for the past five years, and an active competitor in outdoor sports for all that time, I've long felt that the appalling air quality here is the single biggest affront of true quality of life.

Clean air is worth paying for. I believe this city's electricity producers should be required to improve their environmental performance, and that they should meet strict air pollution standards that are at the least equal to genuine "world cities".

Yours sincerely,

Ross Inglis

Subject: Stage II Consultation: Comments
☐ Urgent ☐ Return Receipt

Stage II Consultation

on The Future of the Electricity Market in Hong Kong

Sir,

I have been following with interest the comments made, including those by the utility companies, on the future of the electricity market in Hong Kong. I wish to submit my remarks as below:

- 1) I am in favour of the Scheme of Control remaining in much the same format as at present.
- 2) I do not agree with the proposed different rates of return for different types of fixed assets. Pollution is one of our greatest concerns at present. Emission reduction facilities together with reusable energy infrastructure should be afforded the highest rates of return. This should be even higher than the 11% proposed.
- 3) I consider that the power companies have a point when they state that 10 years is an insufficient period to encourage investment in what are by any standards hugely expensive, sunk assets. It is better to remain with a 15-year agreement period.
- 4) The utilities also have a point concerning emission caps. To the best of my knowledge the government has not yet even decided on these figures. It would therefore appear to be somewhat unfair to link future permitted returns to objectives that have yet to be quantified and agreed on.
- 5) Finally, the proposed opening up of new supply sources (i.e. China) by 2018 is also of concern:
 - a. China does not even have enough electricity at present to meet its own internal demand;
 - b. China's supply is notoriously unstable; and
 - c. Will the power stations in China be subject to the same restrictions on emissions etc. as those in Hong Kong? The simplest way to produce cheap electricity is to burn inexpensive, sub-standard fuel and avoid costs on effective emission control. If that is allowed to happen the result will simply be the continued pollution of the whole Pearl River delta area. No Thank You!

Ross Mitchell

3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

I understand that most of the air pollution in Hong Kong is caused by the power stations in Hong Kong.

Since this is a matter of life and death, I would urge the government to make the reduction of pollution the PRIMARY consideration when considering the new scheme of control: how much profit the companies make should be a secondary consideration.

If the principle of "Polluter pays" is to be anything more than an empty slogan, then we must recognise that ALL consumers are polluters (albeit involuntarily) insofar as we benefit from a scheme of control which encourages pollution(however involuntarily).

We should all, therefore, be prepared to pay more for our electricity, and the government should have the courage to sell this message to the people.

Subject: Comment on Stage II Consultation for Electricity Market In Hong Kong
☐ Urgent ☐ Return Receipt

As a shareholder of the Hongkong Electric, I would like to feedback on the Stage II Consultation on the Future Development of the Electricity Market in Hong Kong.

It is proposed to lower the ROR from 13.5% to 7~11%. I am surprised with this act which totally infringes my benefit. Hongkong Electric (& CLP too) is a public-listed privately-owned company. Nobody can force them to limit the ROR to such an unreasonably low level!

I was not doing well in Economic studies in High School, however, I can be sure that 7~11% of ROR is not attractive for a long-term business!

Besides, the paper mentions the two power companies should bear the cost/penalty for the reducing/production of the environmental pollutions. I feel ridiculous of this point!&n! bsp; These few years, the Government proposed a charging system of production and management of wastes by the producers. Regarding the pollutants from the power stations, their root cause is the production (need) of electricity. Who need the electricity? They are the Hong Kong citizens, not the two power companies. Rationally speaking, the Hong Kong citizens should bear the cost/penalty instead!

Like many other shareholders, I own the stocks of Hongkong Electric because I prefer a steady, stable and reasonable growth of profits. Besides, I trust their Management ability in view of their performance in the past: no great disaster of power shortage, good customer services, and most important reasonable amount of dividend offered each year!

Before the Government finally imposes such unfair condition, I will (and most likely many other shareholders) sell out my stocks in hand. I cannot imagine what the market will be!

Besides, I think the image of Hong Kong as a free trade business city wil! I be totally corrupted!

Please think carefully before action!

Roy Chan

Roy Chen

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

30/03/2006 11:16

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Royce

28 March 2006

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road, Central,
Hong Kong

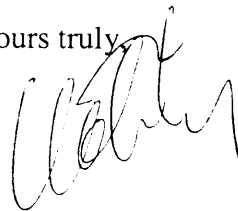

Dear Sir,

**Future Development of the Electricity Market in Hong Kong
Stage II Consultation**

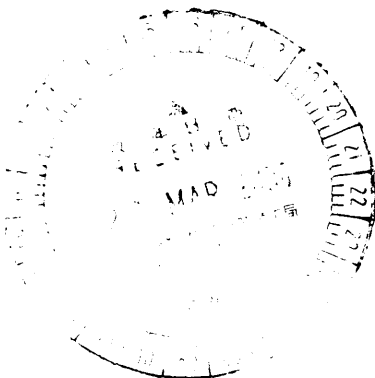

In the proposed economic regulation, the permitted rate of return would be greatly reduced and the regulatory period would be shortened. From my opinion, these two items will reduce the incentives of investors to further invest in the power industry. The current Scheme of Control Agreements is functioning well and the power companies are providing high standard of power supply and good services. In addition, the tariffs are at reasonable and acceptable levels. Therefore, I suggest that there should not be any great changes.

I support the Government that the reliability and safety of electricity supply should be the primary objective in the future development of the electricity market. In order to maintain a high standard of supply reliability, continuous investment in the power industry is a must. I am afraid that the proposed harsh conditions would destroy the high standard of supply reliability we are having now. Therefore, I opine that the Government should consider these proposals with caution.

Yours truly,

Ruby Chung

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Ruby

Subject: 網上行動回應《香港電力市場未來的發展》
☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；

2. 可再生能源的投資可享有較高的准許回報率；

3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；

4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；

6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。
懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Main & East Wings,
Lower Albert Road, Central,
Hong Kong

Dear Sir,

Comments on Stage II Consultation
On
Future Development of the Electricity Market in Hong Kong

After reading your Stage II Consultation paper, I would like to give my comments as follows:

Proposals supported:

- *The policy objective to ensure that the public can continue to enjoy reliable, safe and efficient energy supplies at reasonable prices, and to minimize the environmental impact caused by the production and use of energy*

Hong Kong should achieve this objective to maintain its status of a world financial centre. However, given to the high-rise living and working environment in Hong Kong, reliable and efficient supply, environmental improvement and price are of equal importance. As such, it is imperative that reliability of supply and better air quality can be provided for without extra costs to the consumers.

- *Safety regulation and environmental regulation to be continued by legislation while economic regulation to be continued by bilateral agreement, and corresponding responsibilities to be undertaken by various Government bureaux and department*
- *The present SOC regime is very effective in delivering reliable supply, reasonable environmental performance and affordable tariff. Government should maintain it for the next 15 years with minimum modifications.*

Proposals with reservation:

- *Rate of Return (ROR) 7% - 11%*

The ROR should be such that it can offer enough incentives to power companies to invest but on the other hand will not lead to excessive increase in tariff.

A useful yardstick, used almost worldwide for infrastructure investments, is to link the return on equity to the WACC (Weighted Average Cost of Capital) of the two power companies listed in Hong Kong, allowing extra return for investment in improvement in better air quality. The merits of such approach are that the calculation of WACC is all based on historic data and can be arrived at very objectively.

I am afraid that such ROR cannot incentivise power companies to invest adequately in electricity infrastructure. This can lead to power shortage and degradation of supply reliability. Since the current electricity tariffs are very affordable, it is no point to further lower the tariffs by reducing the ROR at the expense of jeopardizing the supply reliability.

- *10-year Regulatory Period*

Since investment in electricity infrastructure is very capital intensive and would take a long time for cost recovery due to the long life of the assets, a regulatory period of shorter than 10 years will discourage power companies from investing. However, a regulatory period of say 15 years plus seems excessive.

- *Prepare for possible new supply sources from the Mainland*

For the sake of reliability of supply it would not be safe for Hong Kong to rely solely on the Mainland for electricity supply in the future. The Mainland has a poor record of supply reliability and indication from available figures is that it will be at least 10 to 15 years before the Mainland can satisfactorily address its power supply shortage. If Hong Kong is to integrate into the same power pool of the Mainland pre-maturely, we will have power shortage (or sky-high electricity price) whenever they have power shortage, and power interruption whenever they have power interruption. As a world financial centre Hong Kong cannot afford this, at least not in the coming 10 years.

I must emphasize that reliability and efficient services are of paramount importance in the local electricity market. Improvement of air quality and affordable tariff should also be high on the agenda list for the local electricity companies. None of the above goals should be realized at the expenses of the other two.

Please be sure that a balance approach is adopted in making your final decisions

Yours faithfully,

Rupert P W Mak, Ph. D., C. Eng

Mr Rupert Spicer,

Economic Development and Labour Bureau,
2/F Central Government Offices,
Main & East Wings,
Lower Albert Road,
Central
Hong Kong.

28th March 2006.

Your ref: CB (1) 626/05 – 06 (01)

Dear Sirs,

Re: The Future Development of the Electricity market in Hong Kong
(Stage 2: Consultation.)

Please may I refer to the above paper and express my views in brief? I wish to concentrate on Environmental issues namely Air Pollution: a fundamental problem of public importance.

THE SOURCES? ... **WHAT THE PAPER LEAVES OUT.**

THE LAST TEN YEARS

YOU HAVE LEFT OUT THE ACID RAIN!

The consultation paper does not identify the causes of pollution and, as a result, the conclusions it invites are fundamentally misinformed.

May I please invite you to look at a photograph?

On Friday 2nd May, 1997, this photograph was taken. It shows the Lamma Power Station from a ferry, travelling from Hong Kong Island to Silvermine Bay. The time was in the mid afternoon.

This photograph illustrates two important points:

1. Even though you can see the particular pollution caused by the power station (mostly steam, one assumes) the **general** level of pollution in Hong Kong was, **at that time**, low. You can see the Islands and the sky clearly. This photograph shows a reliable example of '1997 pollution' because the clouds in the upper section of the picture are '*Alto cumulus*.' *Alto cumulus* are 'high' clouds which float at between 7,000 and 20,000 feet. They are not rain clouds. The presence of

altocumulus implies that no rain would have fallen recently. Visibility was good: at 'up to 4 miles.'

Today, that photograph could not be attempted (save under exceptional conditions.) The General level of pollution has risen so much that all one would see would be a blurr of grey smog.

- 2, In 1997, a section of the population was being definitely affected by pollution but the question of 'pollution' (in the sense we understand it today) was not (at that time) a political issue.

Between 1997 and today, our own power companies have not changed their practices significantly, so our own power companies are not to blame for the general conditions. On the other hand, it is common knowledge that the Pearl River Delta has industrialized significantly (the PRD.)

The consultation paper fails to address the question of the sources of the pollution: local or from the PRD. In so doing, it invites the conclusion that by installing Emission Control Equipment in Hong Kong, a particular improvement can be made. This is just not true. There is no scientific basis for this proposal. What is required, before a consultation let alone a decision, is reliable information. I shall now explain why we need reliable information (and attempt to exemplify.)

From 1997 until today: generally
Personal observations

Over the last 10 years, it is well known that the level of air pollution in Hong Kong has risen markedly. During that time, I have lived at an altitude of 2500 feet on Yi Tung Shan, Lantau Island ... (Yi Tung Shan is a small hill about 1 kilometre due East of Dai Tung Shan or Sunset Peak.) Under favourable weather conditions, I can actually watch the heavy smog of PRD pollution (a wall of brown gunk) drifting South over Hong Kong.

I also collect my own rain water. The Ph (acidity) in my water cistern was Ph 4.5 (11th October 2005.) Last night, I measured the Ph again, but this time I used a sample of rain water from the roof top: it was 4.5 (the same.) In each case, I used a Ph paper made by Micro Essential Laboratory Inc. and which had been carefully stored.

Acid Rain

Rain water of this acidity is "acid rain." It falls not only onto my roof top but also onto the ground of the North and South Lantau Country Parks. The Country Parks are being acidified. Acidification will (eventually) kill (first) all water crayfish and then the frogs. This will

herald the collapse of the food chain among small animals (such as mice, rats and snakes.)

The second stage of acidification will commence once the soil has exceeded its 'critical load.' After that point, the soil biology collapses: plants die and heavy erosion begins.

(See: A Handbook from Reporting on the Environment: A Handbook for Journalists by Sharon M Friedman and Kenneth A Friedman. kaf3@lehigh.edu)

Acid rain: conclusion.

If I am right, I would say that, on Lantau Island, the PRD pollution will cause the South slope of Lantau to (simply put) slide down into the catch water and fill in South Lantau Road. As for the rest of the territory; we will be reduced to a barren rock with hardly a tree upon it. This prognosis is why it is important to obtain reliable information.

RECOMMENDATIONS (Acid Rain)

In political terms, I recommend that the Government study the experiences of the Russians and the Fins (together with other Scandinavians.). Between the 1960's and the 1990's; Russia was a politically powerful but an industrially dirty generator of electricity. The Scandinavians were, by contrast, weak but clean living. They were all neighbours. The problem arose because Russian acid rain would fall onto the Scandinavian forests and into Scandinavian lakes. In many respects, the same problems occur here today. I suspect the experiences of the Russians and the Fins (and the solutions found) would be very helpful. You might start by inviting the Russian and Finnish Consul Generals around for a drink!

In scientific terms, the Government needs to know the 'when' and the 'how?' When will the acid rain overwhelm the ecosystem? And 'how' will it do so? The Government is invited to perform a literature search among the voluminous (similar) case studies in the world and then commission field work in Hong Kong. Field work will establish a base line and will then enable the Government to predict (and avoid?) the onset of any collapse. The research should be peer reviewed and then published in Chinese.

This consultation paper, an explanation should be tendered to the public concerning PRD pollutants.

EMISSION REDUCTION FACILITIES
(A SILENT STATEMENT OF RESPONSIBILITY)
(The last three years.)

It is only after the causes of a problem (general pollution) have been identified that a fair solution recommends itself. The failure (in the Consultation paper) to deal with the subject of the causes of the pollution creates the intellectual climate for a wrong conclusion on the subject of emission reduction facilities.

I would assert that the local Electricity Generating Companies are not to blame for the overall pollution; therefore they should not foot the bill. In the absence of any reliable information, I shall rely upon not only the photograph referred to above but on my own observations. For the last three years, the pollution has been generally high but it has lowered noticeably during PRC public holidays such as 'Golden Week' and 'Chinese New Year.' This difference can be measured by the number of stars that one can see at night (the number increases when the PRD factories are closed.)

It is noticeable that the Consultation Paper is devoid of any analysis of the sources of pollution. I conclude from my own experience that the major source of pollution is from the PRC and in particular from the Pearl River Delta (PRD.) I also conclude that Hong Kong may be under the threat of dire damage to its Country Parks and water gathering grounds.

Unfortunately, this truth is not publicly acknowledged and this failure runs right through the consultation paper. It leads to muddled thinking (e.g. emphasis on uncommercial renewable energy) and unreasonable conclusions i.e. that the Power Generating Companies should pay for the cost of Emission Reduction Facilities.

EMISSION REDUCTION FACILITIES
(an argument in support of their use)

In the consultation paper, the case for and against the installation of Emission Reduction Facilities in Hong Kong was not addressed.

As you can see from the photograph; the installation of Emission Reduction Facilities in Hong Kong will not have any significant effect on the overall air quality. So why install it at all? The reasons must be political:

- A, China relies heavily on coal and will do so for the foreseeable future. The best way to improve air quality in Hong Kong is to clean up the Pearl River Delta. This we (like the Finns) cannot do directly, but we must strive to do it in any way we can. We must serve China. We must acquire "for China"

the latest technology and know how. We must commercialize it (make it pay.) We must lobby the PRC and then (when called on to do so) we must export the technology to China (in particular to the PRD).

- B. If our means of direct control over the PRD are severely limited: we must maintain an 'envied standing of living' and attempt to influence them with it. The true purpose of the Emission Reduction facilities is to legitimize a Government campaign (on behalf of the citizens) for similar facilities to the North.

This is politics. It is not business. Neither of these political aims will be advanced by the Government (on behalf of its citizens) by failing to pass on to the consumer (the real polluter) the true costs of clean air nor will these political aims be advanced by blaming the (Hong Kong) power generating companies. The fact that the citizens are paying for, are willing to pay for (and can afford to pay for) the cost of 'clean air' legitimizes (and strengthens) the Government's argument that other neighbours should follow.

EMISSION CONTROL: CONCLUSION

Accordingly, I support the initiative to install emissions control equipment on existing coal fired power stations (Your paper paragraph 5. b.(1)) but I do not support the proposal (5, b (ii)) that costs should not be passed on to the consumer.) How we, the people of Hong Kong, address the question of cross border pollution is a problem for the people of Hong Kong to face up to honestly: not one to dump onto a special group. By implication, I also support the continued use of coal: it is the third leg of our electric stool and it is a proven technology.

GRID ACCESS AND INTERCONNECTION (Something had been left out!)

Once again it is remarkable that there is no reference to Hong Kong selling electricity to the PRC. The assumption instead is that only the PRC will sell to Hong Kong. Why is that? I would propose that it is because it is so well known (so as not to even bare mention) that the cost of generating electricity in the PRC is much lower than in Hong Kong. This, I suspect, is because in the PRC:

- 1, prices of fuel are controlled,
- 2, labour costs are lower and,
- 3, the general regime for electricity generation is more production/profit orientated and less cost orientated (i.e. they are dirty generators.)

Electricity (like water) is such a fundamental part of the economy of Hong Kong. For both political and commercial reasons; it may be desirable to buy it from the PRC. Unlike water, incoming electricity cannot be measured at the border (for pollutants.) Once the Government starts opening up the Hong Kong market to the PRD, the Government will lose control of the pollution issue: it will be decided by the Power Stations North of the Border.

The legal and economic systems of Hong Kong and the PRD are still sufficiently different to give strength to the principles of 'one country two systems.' In the consultation paper there is a strong theme of wishing for change (even interference,) on the other hand the Joint Declaration dated 26th September 1984 envisioned a minimum of change in the basic policies towards Hong Kong's economic affairs ... for a period of 50 years.

Until the economic priorities, are the same on both sides of the border, the effect of 'buying' electricity from the PRD will be to increase the general load of pollution in the PRD (and in Hong Kong.) This is not a 'good neighbour' approach to cross-border relations; and it does not help Hong Kong deal with pollution.

Except on a case by case basis (e.g. Daya Bay and Pumped Storage) I am not in favour of grid access and interconnection for at least the next 15 years. ON the other hand, I am in favour of discussion on the point since it is consistent with the onward integration of HK's and the PRD economies and it will provide the Government with a reason to raise the subject of pollution in the PRD.

SUMMARY

The questions of Emission Control and Grid Access are political questions and not commercial ones: the Power companies should be neither blamed nor made to pay. They are in business; not politics.

Rates of Return.

This is too complex: I have no comment to make.

The time for the next regime

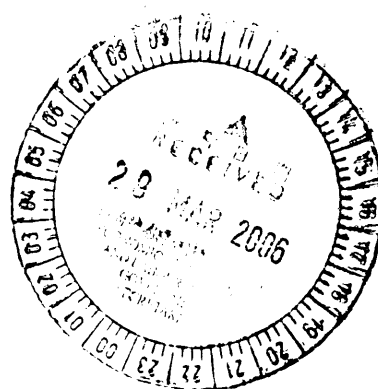

This is too complex: I have no comment to make.

Yours faithfully,

R. H. Spicer

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Ruth Dineen

Subject: 我要清新空氣

☐ Urgent

☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: FUTURE DEVELOPMENT OF THE ELECTRICITY MARKET IN
HONG KONG

☐ Urgent ☐ Return Receipt

Dear Sirs,

I have read the document entitled "Consultation Paper in Future Development of the Electricity Market in Hong Kong" with great interest and congratulate its authors on its presentation.

I have been involved in business in Hong Kong, including the electricity supply industry – in one way or another, for almost forty years. Throughout this period I have witnessed first hand the major changes that have taken place in the territory, and have felt very proud of the way it has grown. We should remember, without a reliable electricity supply, the cost of which compares favourably with tariffs world-wide, this growth could not have been achieved. I would suggest China Light and Power and Hongkong Electric have made significant contributions to Hong Kong's success through many years. I would also suggest, the various government departments have made a significant contribution in monitoring the power companies and ensuring they serve the community well.

Those of us who are approaching a more senior stage of our lives tend to be a little nostalgic, and often resent change. However, I try to be forward thinking and recognise the world does not stand still and change can often bring with it improvement. And so, I have tried very hard to keep an open mind on what I read in the paper.

An old adage I would urge people to bear in mind when considering the future is "If it isn't broken don't mend it". That notwithstanding, there is always room for fine-tuning a working entity.

For convenience I use Chapter 3 of the paper, Summary of Recommendations, for my comments.

A. Policy Objective

Nicely stated.

B. New Supply Sources

(I) Although an alternative source of supply from the Mainland might be very useful some time in the long-term future, with the tremendous development going on there and its present short-fall in available electricity, it could be dangerous for Hong Kong to assume a reliable supply of electricity could be available in the short- or medium-term. It could very well be that the needs of Hong Kong consumers could be seen by those providing the supply as being entitled to a lower priority in the event of an emergency situation on the Mainland than their local consumers. Hong Kong has always in the past been self-sufficient in its electricity needs. It is suggested this should continue.

(II) This seems worthwhile. Wind and Solar energy in meaningful quantities, within the confines of Hong Kong, are unlikely to have a big future. As to Energy-from-waste, possible detriment to the environment needs careful attention. Hong Kong is already more polluted than it should be. Experience at Lai Chi Kok and Tsing Yi

should be carefully considered.

(III) No comment.

C. Proposed Regulatory Arrangements

(I) No comment

(II) No comment

(III) (i) It is reasonable for the Regulatory Instrument to include the provisions proposed, except that the period of ten years would appear to be too short for the electricity companies to properly plan their affairs. Anyone investing capital needs to be reasonably sure that an adequate return on that investment will be achieved. The amounts involved in building power stations and transmission and distribution networks is considerable. The timescale for developing these facilities is long. For the power companies to have sensible development plans they need to know their income is reasonably secure for the next planning cycle, which would not be the case if they could only look ten years down the line.

(ii) The objectives set out under the heading Return are reasonable except that a review every five years is impractical, for the reasons set out in (i) above. The permitted rate of return is clearly a very important part of any negotiations with the power companies. It is easy for an outsider to say that the present levels are too high. However, there must be some historical reasons why they have been set as they are. The government will be in a position to state where it feels these reasons are no longer valid, and for the power companies to prove otherwise. On the face of it, though, a reduction to 7% - 11% from 13.5% - 15% seems rather drastic. Presumably somewhere in between these two there is the right level. It is to be hoped that negotiation between the parties will be able to identify the figures.

(iii) The objectives stated under the heading Tariff seem all very reasonable. It is not clear, though, what an annual tariff review might be used for. If this is to see how the Fuel Clause Account is working and/or how the Tariff Stabilisation Fund stands, then all very well. If this were to be used to suggest adjustment to the rates of return then this would not be good.

(IV) Although it makes sense to review the efficacy of the current setup in monitoring and controlling the operations of the power companies, it is to be hoped it does not become necessary to set up a separate regulatory authority for this purpose. After all, one way or another the same people who purchase the power from the power companies would be funding this group through its taxes.

I do hope these comments may be taken into consideration.

Yours sincerely,

R.W.Brooks

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am concerned about the air pollution caused by the power stations and cross-border pollution.

In the UK and USA power generation is much more closely regulated in relation to pollutants. In the case of Hong Kong where there are only two monopoly suppliers discussion and enforcement of higher clean air standards should be much easier.

As well as requiring a stronger and more effective response from the two monopoly suppliers it would be very easy in Hong Kong to impose a minimum temperature for air-conditioning in commercial buildings.

There is no reason why all of the office buildings - especially those with central air-conditioning should not be obligated by law to have a cooling temperature of no less than 23C. Some buildings are at 18C.

I agree with Friends of the Earth that co-ordinated policies should be developed, but there is nothing to prevent early implementation of some simple steps that are within Hong Kong government's capacity to legislate for.

關於：香港電力市場未來發展 - 意見書

本人對香港電力市場未來發展有以下意見：

本人認為如果香港引入新的電力供應者，除了要考慮其供電之穩定性外，亦要知道新的供電公司必會選擇只在低投資額地區鋪設電網、吸納客戶，屆時兩電(港燈與中電)必會將增加的成本轉嫁至其高投資額地區的用戶(即港九的市民)身上，屆時我們會被迫承受更貴的電費，得不償失！

Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To the Economic Development and Labour Bureau,

As a Hong Kong citizen I have become more and more alarmed at the state of the air and the sky in Hong Kong over the past two years. Whilst I have lived in Hong Kong for the past five years I will have no hesitation in leaving permanently for the privilege of a blue sky if I don't see one in the near future.

S J Sidley

30 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Sir,

Electricity Market in Hong Kong

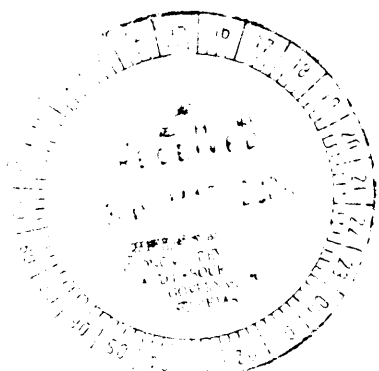

In your Stage II Consultation paper, the proposed regulatory period is shortened to only 10 years and the proposed permitted rate of return is set at 7-11%. Certainly these will increase investment risks of the power companies and therefore the power companies may not install new equipment. Without adequate investment to maintain the existing supply reliability, the power supply quality in Hong Kong will drop and we may face frequent power shortages or even blackouts. As a result, serious impacts on the economy of Hong Kong may occur.

The Government should provide enough incentives to the power companies in planning for the new regulatory framework so that the power companies can keep on installing equipment for providing a reliable electricity supply in Hong Kong.

Yours sincerely,

S. Jebson

S.K. Chan (署名) 啟

30th March 2006

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main and East Wings
Lower Albert Road, Central,
Hong Kong.

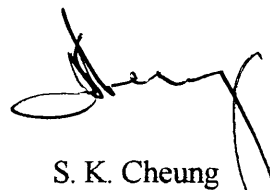

Dear Sir,

Second Stage Consultation on Power Supply Development

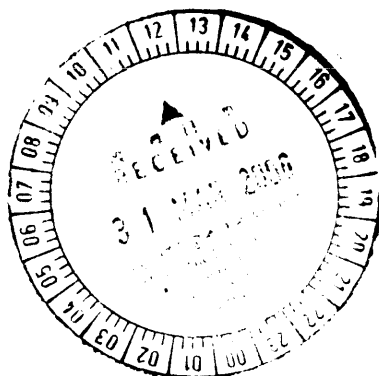

With reference to the captioned consultation, I would like to highlight below the key concern about the coming developments for the balance of interests to Hong Kong as a whole, including the citizens, the investors and above all, the community.

The ultimate solution under the present situations of the power supply industry in Hong Kong is to progressively introduce open and fair competition among qualified investors. The key constraint at present is the barriers against new investors or consumers to effectively set up or connect to the existing transmission and distribution networks, particularly in the densely populated environments of Hong Kong. Strictly speaking, the present power companies have enjoyed higher profits on average, due to the economy of scale under such environments, as compared with many investors in other countries. In addition, such privilege enjoyed by the existing power companies has also been enhanced through the protection of their interests under the Scheme of Control Agreements.

It is now the right time for the Hong Kong SAR Government to plan and negotiate with the existing and potential power supply investors on the opening of the access to the transmission and distribution networks. It will be a long term gain to the community as a whole, for both commercial and technical reasons, if standardized strategies are adopted for the transmission and distribution of power supply in a small community like Hong Kong and in which specific consumers should not be penalized with higher tariff due to guaranteed profits by any power company which actually does not perform so well as the counterparts.

S. K. Cheung

經濟發展及勞工局 華樹賢局長

今有奉告者本人居港已近60年向來認為香港電力收費不菲太貴而絕對不影響一般市民生活舉例來說我在港開設一間經營日用品商店舖內有一部中型電雪櫃全日24小時開動而又使用一部膠袋封口啤機一部付真机及一部收音机并裝有5枝48吋光管而在熱天時較更開動兩部電風扇每月平均電費138元左右即每日4元多些不足購買一部冷氣機這怎會影響一般市民生活但有幸市民安居樂多部冷氣機從不机電熱水炉電飯煲微波炉電視机電腦自VCD等音響設備所需電費有如一部小型工廠洋列要滿需年又餘通例享受而又不能受什出所需費用只說電費太貴更有一事孔安議及此等電台為什麼只說某某公司縣大錢錢多係之而絕無提及此事机規模大小及所用電多少試問是否一間大酒樓每年縣每佰萬之多而一間文輝檔每年縣每佰萬之多如走者你等議及要再入港商建者才可出東有社會做事者公用事業就章同公為何有一位市民都有可能自有能力購買私指縣大錢之股東做股東因有此等議及不欠當埋系底缺都去買這題股系只叫叫全港市民去購買你等是否厭錢腥式忠有老人燕系莊

近聞港府有意開收電力市均而引入新競爭者而本人亦看見閣下在電台上講述新競爭者是在內地興建長電廠可減少連廠新需費用及大幅減少運作經營成本故可減輕香港電力收費事情但此舉實是違反港府一向所定之政策一面面鼓勵廠商遷回香港而港府市民能許到多的就業機會而今又變成在內地開設香港電力工業平均比內地高出十至八倍但為港電力收費比內地約為出20-30巴仙實是相當便宜在港市民也應理解及滿足為是以上所說却是事實亦合情合理望能刊登在報章上以供市民察閱是祈

利月年老在港 作休不請請示

再者：為港工單平均比中國內地高六數倍 老居我： S K K 謹上
但電費比內地只多了約30%以綜合各類基數計算 P-3-2006
香港電費實是相宜而合理 今村上內地電費舉以供參考是祈

經濟發展局長

電力市場第2階段諮詢

- (一) 本人反對開放香港電力市場，因
- (i) 港燈和中電工人會失業。
 - (ii) 本港建築工程少了兩大客戶。
 - (iii) 香港銀行少了兩大借錢公司。

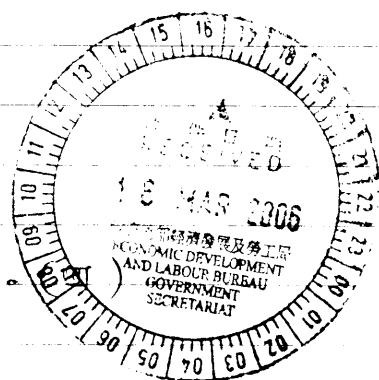

全世界政府都為本地公司謀福利，開市場，為何香港政府卻去傷害香港公司，工人及投資，並厚顏領高薪。

香港的電訊盈科就是給你們害的。

- (二) 本人反對新的監管建議。
- 新建議只是制造更多高薪公務員，但對發電毫無貢獻。

- (三) 建議的 7% 回報率很可笑。現今銀行最優惠利率為 7.5 - 8%。加上風險，折舊，利得稅等，基本最低投資回報應為 13%。

上市公司是‘在商言商’。救濟窮人是社署和政府責任。

(四) 政府收取兩電的差餉及地租與電
無關，理應退還給用電市民。兩電的
利得稅也應還給住宅用戶。

(五) 為香港人健康，請盡快利誘兩電加
裝減排設施。你們高薪公務員已浪
費很多年時間，甚麼也做不到。

(六) 建議採用東京、新加坡和深圳三地
的平均電價作為本港電費。因

(i) 港、九和新界的電費可以劃一。

(ii) 市民的評擊可以減少。

(iii) 可取消監管兩電的公務員，減少
公共開支。

敬啟者:

港燈在二十多年前由那時只有三台燃煤機組至今增至八台,在工作量大增下,但人手方面反而比那時少得多,證明在成本方面控制嚴謹,另一方面,電力供應穩定性提升至99.9997. 港燈在成本控制及電力供應穩定性已作出極大努力,如回報率再偏低的話,本人覺得對小股東不公平.

Subject: Stage II Consultation on the Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Dear Sir,

Please find below my comments on the Stage II Consultation Paper on the Future Development of the Electricity Market in Hong Kong.

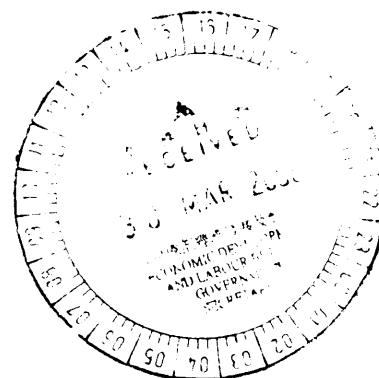

According to the household expenditure survey conducted by the Census and Statistics Department as quoted in your Stage I Consultation Paper, electricity bill on average accounts for less than 2% of the general household monthly expenditure in Hong Kong. This figure is lower than that at Shanghai of 2.79% and Macau of 3.74%. On the other hand, the supply reliability provided by the two power companies in Hong Kong maintains at a high level of at least 99.99%, which is better than many major cities in the world.

When the above two factors are taken into consideration and compared with the expenditure on transport in Hong Kong accounts for 9% of the general household monthly expenditure, the tariff in Hong Kong is considered reasonable. Therefore, the existing Scheme of Control Agreement has achieved the objective of providing reliable energy supply at reasonable price. The current regulatory arrangement is considered acceptable to consumers and changes are not necessary.

Best regards.

S.L. Tse

Economic Development and Labour Bureau,
The Government of the HKSAR,

Central,
Hong Kong

28th March, 2006

Dear Sir/Madam,

Ref.: Comments on the HK Electricity Market

With regard to the recent Government Consultation on the Future Development of the Hong Kong Electricity Market, I would like to say that safety and service stability are the two most important issues in long run.

I live in New Territories. Everyday, there are many kinds of different expenditure which I have to spend on. On top of transportation which is indeed a great burden on my family, other utilities charges like water, gas and electricity account for a large proportion of my income. The cost of living is really heavy. Though I understand from the Government officials that the electricity charge may be greatly reduced when new competition is introduced, I am worried about both of the stability of electricity supply and the quality of customer services provided.

After I moved to my present apartment four years ago, from time to time, I have encountered quite a number of problems like water leakage on the wall outside the bathroom and on the edge near the window, but I have never come across any big problem on electricity supply. This is the major reason why I feel comfortable on the services provided by CLP. I am worried that the new competitors may not be able to provide services with the same standard.

At present, as CLP is the sole electricity supplier in New Territories, when there is any problem, it cannot transfer its responsibility to others. It has the prime responsibility to handle the issue well. However, when there are more than one player in the market and using the same network or facilities to supply electricity, they may argue with one another on the respective responsibilities and may not be willing to take prompt actions if something wrong happens. This is what I am worried of so far.

Furthermore, there are lots of facilities relevant to electricity transmission on the street at the moment. Many of them are located in places which are very close to residential buildings. The maintenance work to ensure these are safe to the public is very crucial. I have read some

news before from the media that there had been some accidents to residents in the mainland resulted from improper or incomplete maintenance work done on electricity facilities. With the past good record in Hong Kong, I believe that the two suppliers can keep the current standard to make people feel that the facilities on the street are in safe condition. To be honest, can you guarantee or make sure that the new competitors can keep promise on the same issue? I do not want to see that when something bad happens, different parties deny to recognize mistakes and just keep on arguing. By the way, if there is only one supplier, it cannot do that. It has to sort out the problem by itself and is incapable of transferring out the responsibility.

While the charges may be decreased for a bit at the expense of the long-term benefits particularly like safety, I prefer to keep paying at the current fee but with the present standard of safety and stability.

Yours faithfully,

A handwritten signature in black ink, appearing to be 'S. Lam', written in a cursive style.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Comment on the Stage 2 Consultation Paper

☐ Urgent ☐ Return Receipt

Dear Sirs,

I would like submit my comments in the attached file for your consideration.

Thank you for your attention,

Yours sincerely,

S. S. Au Comment.doc

Economic Development and Labour Bureau
2/F Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

28th March 2006

Dear Sirs,

Comment on the Stage 2 Consultation Paper

I am glad to read from the Stage 2 Consultation Paper that the objective of the Government's energy policy is to ensure reliable, safe and efficient energy supplies for the benefit of the public. However, some proposals in the Paper are questionable. I would like to present my views as follows for your consideration:

1. The electricity supply system is the backbone of our society. Life is hard if electricity is in short supply. Economically, Hong Kong is facing heavy competition not only from the Asian countries but also from the Mainland. Life will be even harder if our business and industrial sectors have to face uncertainties in electricity supply. I consider it is not sensible to opt for lower tariff at the expense of our living quality and competitive edge.
2. The electricity supply in the Mainland is tight and far from sufficient and reliable. While rationing is frequent and productivity and living standards are on the rise, why should Mainland invest in new plants and transmission facilities for the interest of Hong Kong? The hope for cheap and reliable electricity supply across the border is impractical for many years to come. Hong Kong should maintain enough generating capacity of her own to secure supply reliability, and carry out timely capacity development to ensure sufficiency.
3. The blackouts in California in 2001 and North America in 2003 are to a certain extent related with lack of timely investment in building and upgrading generation and transmission facilities. Since sufficient and timely investment is key to availability and reliability, the new scheme of control should provide sufficient incentive to attract investment. For sizable and slow-return investment, I think that the proposed 10-year return period is too short and 15 years is more reasonable. No conditions should be imposed on the rate of return to intimidate the investors.

Yours sincerely,

S. S. Au

28 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices

Lower Albert Road, Central
Hong Kong

Dear Sir,

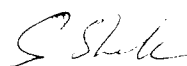

Future Development of the Electricity Market in Hong Kong
Stage II Consultation

I have the following views on the Stage Consultation paper.

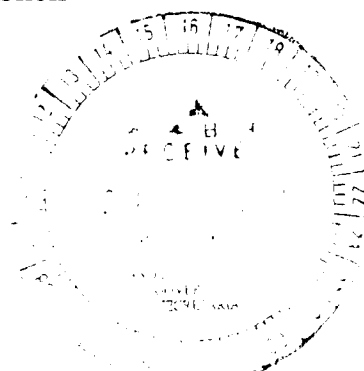

I think that the reduced 7-11% permitted rate of return and the shortened 10-year regulatory period will highly increase investment risks and the power industry investors will reduce their investment in electricity infrastructure. It will unavoidably deteriorate electricity supply reliability and increase the risk of power outages.

I would like to request the government to consider my views and ensure sufficient financial incentives will be given to the power companies to maintain the existing electricity supply reliability in the future.

Yours faithfully,

S. Shek

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Dear Mr. Ip.

STAGE TWO CONSULTATION

In past few years, there is almost double digits growth in economy in provinces of southern China, especially in the Province of Guangdong. But, the growth of electricity supply within these provinces cannot match the economic growth and eventually the South China Grid that supplies electricity to these provinces experiences severe power shortage. There is also many power interruptions reported in the Province of Guangdong and its nearby provinces.

In coming years, even we believe that there is enough power supply in these provinces supplied by South China Grid, but power plants situated in Guangdong and nearby provinces are not equipped with emission reduction facilities, and thus will pollute our environment. The smog in Hong Kong is an evident of poor emission control in Mainland China. If Hong Kong keeps on import electricity from the Mainland, it means that we import pollution from the Mainland that will definitely cause the health care expense in Hong Kong to increase.

The smog in our sky makes Hong Kong look ugly, which will scare away executives coming to work in Hong Kong. Also, this will downgrade Hong Kong as a world-renowned city, and turn away investment and cause unemployment in Hong Kong.

Thanks for your attention.

Yours sincerely,

S.W. Leung

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Stage II Consultation Paper on future Development of the electricity market in HK

☐ Urgent ☐ Return Receipt

Please find below some comments on the above paper:

1. Due to the rapid economic growth of Mainland, the tight electricity supply situations in Mainland will continue. We cannot rely on new supply sources from the Mainland which has power shortage as it will jeopardize the supply reliability in Hong Kong. There are a lot of highly polluting thermal power plants with low efficiency in Mainland, we should not buy the polluting electricity from Mainland in the aspect of environmental protection.
2. There is no need to change the current scheme of control as it works quite well in the past year. Reliable, safe and efficient electricity supply is paramountly important.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Sabrina

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations, by vehicles and by factories and other manufacturing activity owned by Hong Kong companies and citizens.

With respect to electricity generation, I URGE the government to place a high priority on emissions control in the next revision of the Scheme of Control. In particular:

1. The permitted rate of return of power companies should be linked to a power company's ability to meet the total emission caps set under its licence.
2. Investments in renewable energy should earn a higher rate of return.
3. I support RE, but not incineration which generates green house gas. The Government should do more to monetize and share the cost of treating waste (increase sewer and trash pick-up fees for both residential and commercial users and tie fees to usage) and to encourage recycling and reuse.
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the Government to set up a concrete and clear energy saving target. We could start with setting thermostats for all indoor areas at a reasonable level, requiring doors wherever air conditioners are blasting cool air into an interior space that is also open to the outside, and mandating better zoning of thermostat controls in commercial buildings.
5. I would like to see some semblance of coordination between the Guangdong and Hong Kong governments in the development of renewable energy, the production of electric power and the handling of waste treatment and recycling.

The deterioration in the quality of the air in Hong Kong over the last decade has been horrific. The Hong Kong government owes the residents of Hong Kong its maximum effort in bringing back blue skies and a breath of clean air.

香港電力市場未來的發展

本人(本公司)就諮詢文件有如下意見:

(一) 電力供應及回報率

需以穩定供應為首要條件,其次是價格問題,應平衡電力公司的回報及市民用戶的利益,故此准許回報率應下調至單位數字。

(二) 能源政策及環保

政府應有一套清晰的能源政策,使電力公司的投資有明確的方向。現今大眾已清楚表達對環境污染的關注,所以對電力公司的減排污染物的投資及再生能源的投資應有一樣的回報率。

(三) 協議年期

若市民大眾可以有渠道表達自己的利益而有一定的機制使電力公司不可以不理會市民的聲音,協議年期可維持十五年。(比如港島市民一直反對港燈加價,但港燈可以不理會)

致：經濟發展及勞工局

葉澍堃局長

香港電力市場未來的發展

本人曾於二零零五年四月三十日致函 閣下，對上述標題“香港電力市場未來的發展”給予淺見。本人樂意看見上次的諮詢內容已在報上刊登。

本人和我同事經研討後，特函 閣下及貴局再次補充一點意見，供參考：

1．現行規管電力供應制度有效，可繼續沿用。

(因為現時電力充足及穩定，安全可靠；由申請電表至緊急維修，服務優良。因此值得支持。)

2．在發電的同時，須提高環保的要求，建議政府和兩燈商討燃料使用的比例。

(建議考慮增加“壓縮石化固體原料”作為發電燃料，減少空氣污染。繼而減少燃煤。)

3．可再生能源構想和實施，但須研究能否有經濟效益，香港有否天然環境。

(香港實行不了水力發電，實行不了大型的風力發電，實行不了大型的太陽能發電。因此，投資和選址很重要，再生能源發電對香港來說，只可作點滴輔助作用，效益不大。)

4．電力聯網，可作緊急供電和輸電作用，減少電力浪費和互補互惠作用。

(電力聯網是必須和可行的措施，上述數點已可見其利。但開放電力市場須注意多個方面：包括本身(香港)電力供應是否足夠、鄰近地區電力是否穩定、系統是否相同及有沒有排斥性等。開放電力市場很多事實告訴我們，初期電費會因競爭下調些，但後期會更貴，特別是較遠的地區市民申請供電，電力公司或會因利潤低而不想接單。)

5．提供良好的投資環境，亦須研究和顧及每個行業的特性，不應一般化。

(供電商回本期長，投資大，資產壽命長達三十年或以上，而採購簽約一般 20 年，而政府有關協議要求兩燈簽十年，後可續期五年。此預留彈性不合情理，無此需要。)

本人和我同事祈望葉局長和 貴局全人多些考慮香港的實際環境，外國一些先進科技和好經驗，香港能否即時全單照收，是否符合香港實情。

Opinion of Government's Consultation Paper on the Future Development of the Electricity Market in Hong Kong- Stage II Consultation

The excellent performance of Hong Kong electricity supply system, in light of supply reliability, reasonable tariffs and strong environmental performance, has been well established under a long-term and fair regulatory regime that has steadily evolved over the past 40 years. It is clearly sound enough amongst all the stakeholders - customers, investors and government. I agree with your objectives of reliable, safe and efficient energy supplies at reasonable prices while minimizing environmental impact but I do support this regime should be continued to be regulated via a bilateral contract. This is well established system which has served Hong Kong very well in the past. Otherwise, I worry about the government proposal will jeopardize the reliability of our electricity supply system in Hong Kong.

Regarding the duration of the proposed regime, I, as a businessman running a long-term investment in Hong Kong, would like to opine that it is too short if the government reduces the duration of the regime to 10 years, with an option to extend for 5 years. It definitely fails to recognize the long-term nature of the electricity industry, where asset lives are in the order of 30 years or more. In addition, it absolutely fails to acknowledge the distinguished commercial environment of the electricity industry, where the norm of energy contract in the world is 20 years or above. Therefore, both the power company and gas supplier would hesitate to commit each other a contract with a stable and reasonable price, which imposing a violate tariff. My opinion is that the 15 years regime duration adopted in the past is a

prudent based on the assumption that the SoC regime would not be suddenly abandoned at the end of its term.

Finally, there is no adequate incentive to encourage rational investment, while risk profile will be increased substantially due to drastically lower the return to 7-11% on top of unclear migration roadmap to welcome a coming competitive market.

Sincerely

Hong Kong

Dear Sirs,

**Re: Stage II Consultation on
Electricity Scheme of Control Extension**

Asia Port Services handles vessels at anchorages in Hong Kong harbour and is developing inland bonded depots in the mainland.

Our attention has been drawn to the request for responses to the HKSAR Government's proposals for the future of the electricity supply industry in Hong Kong.

Whilst we are pleased with the decision to continue with the existing Scheme of Control arrangements, we do have concerns with some of the proposed changes.

The current scheme provides a reliable source of electricity at a reasonable price. Therefore, we were surprised to see such large reductions in the proposed rates of return on investments. Our concern is that the electricity companies will reconsider levels and timing of further investment in equipment. The knock-on effect will be lower reliability of supply. With excess supply not receiving any return, the electricity companies will be scaling back output.

Electricity is a vital resource for the running of our vessel service. Without a reliable supply, we would soon lose many customers to South China operations.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

27/03/2006 22:04

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Future Development of The Electricity Market in Hong Kong
(Stage II Consultation)

Dear Mr. Ip,

It is my pleasure to express my views on the captioned subject.

In your consultation paper, I have two main comments. One should be careful about setting the rate of return after 2008. I understand that the rate of return is proposed to reduce from 13.5% down to 7-11%. As the electricity infrastructure requires long-term investment and the proposed rate of return is too low to attract continuous investment in the electricity infrastructure after 2008, it is therefore not suitable at this stage to reduce the rate of return so drastically. Besides, it is also not suitable to shorten the regulatory period from 15 years to 10 years. The present SCA has proven its effectiveness on regulating the power company during the last 15 years. I therefore urge the government to ensure adequate incentive for continuous investment in the electricity supply industry in the post-2008 regulatory regime.

Yours faithfully,

Sally Chan

2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;

Subject: View on Future Development in the Electricity Market in HK- Stage 2 Consultation

☐ Urgent ☐ Return Receipt

In the consultation paper, it has been proposed to reduce the permitted return from the existing rate of 13.5% to a range of 7-11% to allow immediate reduction of tariff. I am worry that the supply reliability would be compromised and the lowered tariff would pick up the rising trend quickly.

Business is business, private companies like the electricity utilities need sustained return on investment. A permitted return of below 10% will not be able to attract active investment. In this connection, the equipment reliability may be compromised or infrastructure may not be built timely to maintain supply security because money has been spend on other high return investment.

Owing to the lack of investment incentive, supply network improvement & step up of power generation which require huge investment will be deferred up to time of crisis like examples in the western countries. At that time, there will be a substantial step rise on average net fixed asset and corresponding soar of tariff.

In conclusion, the permitted return shall be adjusted in line with other business return in Hong Kong. If bus companies have a return of just less than 10%, that for power companies with higher risk shall be at least 10%.

Best wishes,

Sally Ma

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Dear Sir

I wish the government could setup policy to ensure a cleaner power generation in longer term, a policy for the 2 companies to strictly compile with. This is more important than lowering of price or introducing competitors from South China.

I think a lot of local people agreed that the superficial cost of a lot of PRC produced items are relatively cheaper than local made or oversea items. However, when you consider also the environmental cost (e.g. pollution) at place of manufacturing, the cost is much higher than expected. I have reservation to have our electricity generated by a PRC company which HK government has no way to control, but in return we have to bear the environmental consequence of pollutants.

Lastly, a stable and sustainable power supply is essential to the continuous prosperity of Hong Kong.

Regards

Sam Chan

Subject: Comment on Future Development of the Electricity Market in Hong Kong Stage II Consultation

☐ Urgent ☐ Return Receipt

Dear Sir,

Please find attached my comments on the above subject.

Sam, K.W.Chan

Mail - LETTER - 04.doc

Economic Development and Labor Bureau
2/F, Central Government Offices, Main & East Wings,
Lower Albert Road,
Hong Kong.

Dear Sir,

Stage 2 Consultation Paper on
Future Development of the Electricity Market in Hong Kong

Referring to the Stage 2 Consultation Paper on Future Development of the Electricity Market in Hong Kong, I would like to express my comments as follow :

1. I support the regulatory instrument shall remain at 15 years instead of 10 years. Because investments in electricity supply industry are long-term (10 years to 20 years) commitments requiring careful planning, coordination and timely investments on plants and network. Both power companies in Hong Kong both have operated more than a century and are committed to provide a safe and reliable electricity supply to the community. Unless the power companies see a clear and favorable future operating environment, they will not continue to further invest in plants and network.
2. The suggested rate of return between 7% to 11 % is considered too low and unreasonable because the return on investment on generation, transmission and distribution plant and network should be commensurate with the level of risks bear by the investors. Long useful asset life of 20 to 30 years, long payoff period and high market exit barrier of the electricity supply industry pose higher risk of investment and demands higher rate of returns.

Lower rate of return on assets discourages future investment on plant and network. The consequence of power shortage and degraded reliability in many deregulated electricity markets had brought about increase in tariff, blackouts that cause substantial economic and financial losses.

Yours faithfully,

Name : Sam, K. W. Chan

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Stage II Consultation Paper On
Future Development of The Electricity Market in Hong Kong

Dear Sir,

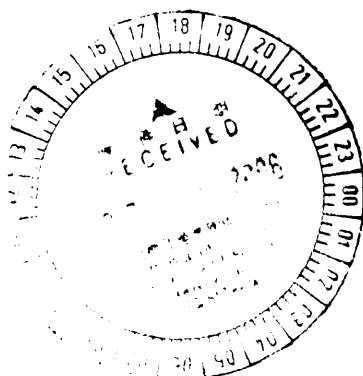

This is my first time to submit my comments for the Consultation Paper on the Future Development of the Electricity Market in Hong Kong.

To be honest, a good electricity supply security is very crucial for the success of Hong Kong. I think the government and the power companies in Hong Kong have already made the best effort to ensure the electricity produced at a reasonable cost.

Regarding the Consultation Paper II, the only items concerned me or most of the citizens are the cost of electricity and the supply security. At present, I understand that the power companies enjoy a permitted return of 13.5%. In the post-2008 regime, I am afraid that your proposed 7%-11% permitted return, which is 2.5% – 6.5% less than the present 13.5%, may not provide sufficient incentive for the power company to invest in the industry. Taking into account of the possible changes of business conditions after 2008, it may further reduce the investment incentives by the power companies in Hong Kong. Lower the rate of return of the power companies may lead to insufficient investment, which will degrade the supply security in Hong Kong. Frankly speaking, I enjoy the high electricity supply security in Hong Kong while the electricity charge is reasonable and cheaper than other well-developed cities. Hence, I do not think the government's proposal on reducing the present rate of return to 7%-11% without the agreement from the power companies is going to work after the expiry of SCA in 2008.

Yours sincerely,

Sam Lau

Subject: Comments on Stage II Consultation

☐ Urgent ☐ Return Receipt

Dear Sir,

After reading your Stage II document, I would like to support your policy objectives that have set a right direction for the future electricity market. Some of your recommendations need to be revisited and I would also like to comment as follows:

1. Due to rapid economic growth of Mainland China, the electricity supply situation in Guangdong will continue. We cannot rely on new supply sources from the Guangdong and which has power shortage, as it will influence the supply reliability in HK.
2. To cope with the tight electricity supply situation in Guangdong. The small power plants are the severe polluting sources and their emissions are the major contributing factors for the deteriorating air quality in the coast of Guangdong.
3. The short regulatory period of 10 year is the barriers to investment. This duration of regime fails to reflect the long-term nature of the industry.
4. 7-11% return rate is not attractive in the present investment market.

Finally, the continued provision of a quality supply at reasonable cost is essential for our community's social economic well being.

Your Faithfully

Sam Leung

有關來自內地的電力, 國內電力供應仍然緊張, 真沒令人有足夠信心相信能有可靠的電力供應,
到時要常停電時, 可能後悔已經太晚了. 另他們長途跋涉由內地供電來港, 電費真能下調嗎?
到時電費減唔到, 時常停電, 真係得不償失. 這是我個人少少意見.

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Samantha

27 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices, Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Mr Secretary,

Stage 2 Consultation – Emissions Reduction

I have the following views on Stage 2 Consultation proposal related to emissions reduction.

The Government proposes giving the lowest return rate to emissions reduction facilities and the highest return rate to renewable energy installation. To me, both emissions reduction and renewable energy are good to our environment. Why do they have different permitted rates?

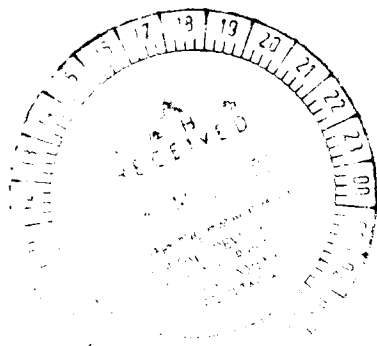

I can hardly agree with the Government's view that electricity consumers should not bear the full cost of emissions reduction. I feel I should share the responsibility for reducing pollution from the course of electricity generation, simply because the more electricity I consume the more pollution will be produced. Therefore, I think we should bear the cost of pollution reduction, and the Government should not give the lowest return to emissions reduction facilities, which will discourage the respective investment.

Hence, please revise the corresponding proposals and encourage the power companies to install sufficient emissions reduction facilities to improve Hong Kong air quality.

Yours sincerely,

Sammy Chan

Subject: 香港電力市場未來的發展第二階段諮詢

☐ Urgent ☐ Return Receipt

你好，

我反對現階段從中國輸入電力或引入競爭。

雖然表面上可能令電價下調，但加入競爭者定必從中國輸入電力。長遠會令香港依賴外圍的電力供應，而本地的電力公司定必減少投資興建新設備。

而香港在中國電網的最遠端，如和中國聯網，對香港的電力穩固性一點好處都沒有的。

通常問題不會一下子出現，就好像外國發生的大停電都是十年一遇。但在香港遇到的話，社會需要付出的代價會相當大，屆期要補救就已經太遲。

Personal comment on Electricity market after 2008.doc

To : Economic Development and Labour Bureau
Central Government Offices
Hong Kong

Date: 31st March 2006

Re: Stage II Consultation on Hong Kong's electricity market after 2008

Dear Sirs,

There has been a variety of discussion on the opening up of the HK electricity market after 2008. Although the public may not have the full details, but based on the information that I could obtain through the media and public hearings, I would like to express some comments on this topic.

- a. A complete deregulation or opening up of the electricity market is not practical in Hong Kong. Our city is unique in that so many people live in a such a small place geographically. Unlike other parts of the world, most of our basic infrastructure (like water, telephone, gas, electricity) need to be buried underground. This is a huge cost for any new market entrant. Looking at the fixed line telephone market as an example, in the end the company that owns the last mile is still the dominant player. New entrants just do not want to invest in building new infrastructure. Renting the last mile often leads to commercial dispute. I am afraid a complete opening up of the electricity market would lead to the same path. The last mile owner will always be the dominant player.
- b. I do not support the opening up of the electricity market to companies based in the Mainland. If we do that, we are actually shifting production capability to the north. In the long run, this will make HK blends into the market mechanism of the Mainland. That is, we lose control of our own supply. When there is a power shortage and power could sell at a higher price in China, HK's interest would be scarf iced. We pride ourselves as being a major cosmopolitan in Asia; this is a result of excellent infrastructure and/or legal & accounting system. We should not make ourselves depends on the Mainland in this area.
- c. Moreover, if we open up our electricity market to the Mainland, we will be shifting jobs and environmental problem north too. The air quality of HK had deteriorated for the last couple of years. I suspect this had a link to all the factories and some of the power companies in the Guangdong region. I have heard stories about factories buying up power from black market power generation facilities or small-scale diesel powered generator.
- d. I do not support the grid opening up for interconnection between CLP and Hong Kong Electric. This would only lead to "finger pointing" at a major power outage that involved both companies. The goal for many HK people is for stable electricity supply at a lower price. Connecting the grid might blur the responsibility during a major incident. I do not believe this interconnection increases the stability of electricity supply on both sides of the harbor.
- e. I do not support the government penalize the electricity companies based on excess capacity. I suggest the penalty should be tied to service level. For example, how many power outage in a year, restoration time after

power outage... Electricity market is different from the telecommunication market. Production capacity needs to cater for peak demand. Drawing on the analogy of the HK's mobile telephone network market, the public certainly does not want to see the jamming of phone line during a typhoon warning from signal 3 to signal 8. Therefore, electricity supply should be catered for stability during peak demand and emergency.

Here above are my personal comments on the captioned topics.

Yours truly,
Samson, Chan Kwong Yiu
Resident on the Kowloon side

Subject: Comments on Future Development of the Electricity Market in
Hong Kong Stage II Consultation Paper

☐ Urgent ☐ Return Receipt

Dear sir,

I have a few comments on the "Future Development of the Electricity Market in Hong Kong Stage II Consultation Paper" as follows-

First, the power companies have already been regulated by the EPD, they will be fined if they fail to meet the emission cap in the SPLs. Hence, double penalties will be resulted if their permitted rate of return is linked to their achievement of the emission cap and this is unfair to the power companies.

Moreover, the proposed permitted rate of return at 7 to 11 percent may not attract further investment and this will lead to deficiencies in infrastructure.

Furthermore, the proposal of shortening of the period of bilateral agreement from 15 years to 10 years is not appropriate for power utility as the power industry is very capital intensive and it has a long payback period.

Finally, the proposal of asset classification is not feasible as it will complicate the regulatory structure and raise administrative costs.

Regards,
Samson Chan

These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Samuel Chiu

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Future Development of Electricity Market in Hong Kong (Stage II Consultation)

☐ Urgent ☐ Return Receipt

Dear Sir/Madam,

I would be very much appreciated it if you could consider my comments as attached in the making policies on the Future Development of the Electricity Market in Hong Kong.

Best regards,

Samuel Leung
MIEE, MHKCS

Energy Market Consulation 2.pdf

31st March, 2006

Dear Sir/Madam,

I would like to present my opinions on this second stage of consultation as an Information Technology professional. During the consultation stage one, I submitted my comments and noted that the Government had considered some of my points and reflected in this second stage of consultation. To this end, I hope that the Government will once again consider my views towards the making of future strategies in the development of Hong Kong future electricity market.

Supply from the Mainland

This open market option exists many disadvantages over a few advantages in long term. According to experiences in the US, UK, and Europe, the economic advantages will diminish within several years later but the disadvantages will bring forward a painful electricity tariff soaring up thereafter. The worst point for this option is that there is no way back!

Competition between Mainland and Hong Kong electricity suppliers exists unfair terms and conditions fundamentally. Operating cost, pollution controls, and regulatory requirements are all on different grounds. How to ensure that electricity production controls in the Mainland fulfill our requirements and standards? Not only is this task almost impossible, but also stable electricity supply is also questionable. Yet our livelihood is very much dependent on this electricity reliability and stability. Therefore this open market option is very risky and will lead to an indelible blunder.

Renewable Energy

The Government should take a strong initiative and support the universities in Hong Kong to research topics in renewable energy. The Government should also encourage CLP Power and HEC working together with universities in Hong Kong to the development of renewable energy.

For the sake of better management of energy policy in long term, perhaps the Government should formulate an Energy Department to deal with energy strategies, such as regulatory requirements, tariff, return, Scheme of Control Agreement, and development of renewable energy. In general, cooperation with the Energy Advisory Committee, this Energy Department will be responsible to set out future energy policies for the energy market players including but not limit to electricity, petrol oil, and natural gas markets.

According to the First Sustainable Development Strategy promulgated by the Government in May 2005, 1% ~ 2% of our total electricity supply should be generated by RE by 2012. I hope the Government (Energy Department) will keep this promise and work with the two existing power companies actively and positively in order to achieve this idea.

Regulatory Instrument – Bilateral Agreements – Duration of the Agreements

I support the current 15-year period for the future bilateral agreements. The option to extend by another five years after a 10-year term is not feasible according to the fact that electricity supply industry is capital intensive requiring long lead time for planning and long pay-back period. The 15-year term is beneficial and fair for the electricity companies, shareholders, consumers, and the Government because

- The electricity companies can make a better plan for a feasible investment and proper establishment according to the characteristics of energy market.
- Shareholders can guarantee and enjoy a stable and reasonable return.
- Nuisance and unnecessary electricity modifications to consumers can be avoided provided that tariff can be maintained at a reasonable level.
- The Government can ensure that a stable, reliable, and adequate electricity supplies are in place, which is extremely important to the livelihood and businesses in Hong Kong.
- A harmonious balance can be made between all parties.

New Features in the Bilateral Agreements

I support the basic permitted rate of return should be at least in the range of 10% ~ 11%, which should balance benefits between all parties; otherwise shareholders will hesitate to invest and electricity companies will be reluctant to establish better and advanced facilities. Eventually Hong Kong's infrastructure and competitiveness will be suffered in long term.

Average Net Fixed Assets (ANFA)

I agree to continue to adopt a fixed asset approach, which is consistent with worldwide practice.

Permitted Rate of Return

As I mentioned that we should balance the benefits of all parties, the permitted rate of return should be at least in the range of 10% ~ 11% in order to attract investment and establishment.

I disagree the use of benchmarking is inappropriate. Not all electricity markets are identical, but some of them are very similar that we can learn from and compare with. These similar benchmarks are valuables for our consideration and development.

Tariff

I support the tariffs include the costs for making available the supply (operating costs and fuel charges), plus the agreed return to the companies for providing the service.

My Conclusions

According to my observation of electricity tariff in and outside Hong Kong, our tariff falls within the medium range. In term of reliability versus tariffs, Hong Kong electricity supply maintains at an outstanding and a reasonable price level. In fact I am quite satisfied with the existing situation. Comparing electricity tariff with water and gas bills in my household expenditure, they are more and less identical. On the contrary, transport expenditure is quite substantial.

I believe that a reliable supply of electricity is proportional to a reasonable tariff. We have to take into account that Hong Kong is a free market and it should be, too much controls or interventions will suppress investment and business opportunities. Therefore, the task of setting a reasonable tariff is difficult, nevertheless some key points can be served as indicators.

- Fair and balance benefits of all parties in the setting of returns and tariffs.
- Plan for a better society of Hong Kong in long term, this is the responsibility of the Government.
- Encourage investments to improve the core electricity facilities.
- Encourage investments to improve the pollution control facilities.

These indicators may decide that Hong Kong is moving towards a healthier and better pollutants controlled city or not. If the electricity companies cannot afford to make a reasonable return for investment or maintaining a better standard of living, we will suffer at the end of the day. I concern that the electricity companies are starving to death under the pressure of the public and media on tariff issues. As a citizen of Hong Kong, I prefer to a better standard of living and fresh air instead of a temporary low tariff. I worry that a short-term low tariff may not last but a high tariff will come at the end. This story is happening in many parts of the World.

A stable and reliable electricity energy supply has been agreed extremely important all sectors in Hong Kong. Hong Kong is an international city; inevitably its businesses and communications operate 24 hours a day. We are unquestionably relying on stable electricity supplies from CLP Power and HEC. Electricity is a basic necessity same as water and air, we cannot live without it.

I think the Government should encourage the following initiatives:

- Promote a better pollution control city.
- Create jobs opportunities.
- Ensure stable and reliable electricity supplies

- Encourage business opportunities instead of imposing too many controls and restrictions.

At the end of the day, I hope Hong Kong, as a whole, will become a better international city in continuing prosperity and stability.

Yours truly,

Samuel Leung

Subject: Stage II Consultation paper on future dev of the electricity market in HK

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

From: A Hong Kong citizen

Re: Stage II Consultation paper on future development of the electricity market in HK

I have the following comments:

Permitted return - I think the existing 13.5% should be maintained. The proposal of 7 to 11% in the paper is too low for electricity companies to invest - thus affecting the reliability of supply that we enjoy currently.

4 tier rates of return - this is complex and leads to tremendous administration costs and disputes by both the Government and the electricity companies. The 7% rate of return for the reduction of emission discourages investments to reduce pollution. One tier at 13.5% is simple and effective.

10 year regulatory period with an option to extend for 5 more years - this is too short for an investment in electricity business. The existing 15 years appears to be the minimum.

Government approval for tariff adjustment - this is unreasonable as this will be subject to political consideration. The rate of return may be reduced because of political pressure. The existing tariff adjustment mechanism should be maintained.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

30/03/2006 10:01

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Sandra Gallant

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Lower Albert Road, Central
Hong Kong

Dear Sir,

Stage II Consultation

First of all, I appreciate the efforts taken by the two companies in providing us a highly reliable power supply with an affordable tariff under the Scheme of Control Agreement framework over the past years. There is no ground for the Government to change the current regime drastically. Against this background, I cannot agree the following proposals listed in the paper.

Permitted Rate of Return

The proposed 7-11% permitted rate of return is too low, especially only the 7% return for emission reduction facilities. Without sufficient incentive, it will be very difficult to attract sufficient investment in these facilities to improve our air quality.

Regulatory period

The proposed 10-year regulatory period is too short to attract long term investment required by the electricity industry.

Please be reminded that any drastic modification to the existing regime should only be considered if the benefits are proved to outweigh the costs generated from the change. Otherwise, the whole existing framework should be retained.

Yours faithfully,

Sandy Fung

Dear Sir,

Stage II Consultation

I would like to express my views on the Stage II Consultation proposals.

The proposed 7%-11% permitted rates of return are too small and the period of agreement is too short. I am worrying that these proposals cannot provide sufficient incentives to investors to invest huge long-term capital in electricity infrastructure. Without adequate investment, the reliability of electricity supply will deteriorate and our daily life will be badly affected by power outages.

The government should maintain the regulatory period at 15 years and increase the permitted rate of return to provide sufficient incentives to power utility investors to invest in their electricity infrastructure.

Yours faithfully,

Subject: Feedback on Stage II Consultation Paper
☐ Urgent ☐ Return Receipt

consultation paper feedback.doc

To Whom It May Concern:

As a HK citizen, I have the following comments on the stage II consultation paper:

1) Different rate of return for different assets

I disagree with the suggestion to apply different rates of return to different assets. From economic point of view, this will distort investment decision and create administration cost. A high administration cost will be needed in order to monitor the “differentiation of assets”, both within the power companies and the monitoring Government bodies. I am afraid that the money saved by the lowering of rate of return will not be enough to compensate for the increase in administration cost (employing more highly paid Government officials!?). I think a “Keep It Straight & Simple” principle should apply.

2) Open market

I disagree with the opening of electricity market in the medium future, especially on the network side. Government should plan for the long term economic efficiency of different market models of HK electricity market rather than just aim at a short-term relief to some social leaders’ pressure for their own political sake. I just doubt the efficiency of bringing a “2nd duplicate network” to HK. HK people are already complaining there are so many excavation works going on in different areas in HK. If Government allows another power company to build a 2nd duplicate network, more excavation work will be expected. Furthermore, it will be economically inefficient to duplicate the investment. The inefficiency will eventually be reflected in the tariff and HK residents will suffer in the long run.

3) Lowering of permitted return

While I agree that the permitted return should be lowered, it should still be at a level that gives investors the incentive to invest and improve their services. If the bus company can have a permitted return as high as 10%, I just don’t know how one should expect any investor will be willing to invest in the capital intensive electricity market if it will be given a permitted return of just 7%! Ordinary people can earn a risk free rate of return of 5% by investing in Government bonds / T-bills, I don’t think any one will be willing to invest in a market that gives just 2% extra return but involves high risk. If company was not given a reasonable rate of return, it will not be willing to invest and eventually will affect the reliability of network / system. I don’t want to see the North American black-out case to be happening in HK!

4) Different tariff level between HK residents living on both sides of the harbour

Can the tariff between HEC and CLP be brought to the same level? The lowering of permitted return does not guarantee HK residents living on both sides of the harbour are fairly treated. Will people living on HK side still be paying 30% higher electricity bills even after the electricity market reform? The stage II consultation paper said nothing on this.

Regards,
Sandy Ng

I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

25 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices, Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Sir,

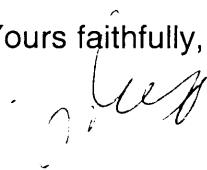

Future Development of the Electricity Market Development in Hong Kong
Stage II Consultation

Thanks for the current regulatory regime. Electricity supply service in Hong Kong is good and I feel good about the current level of electricity supply reliability and the tariff that I have to pay.

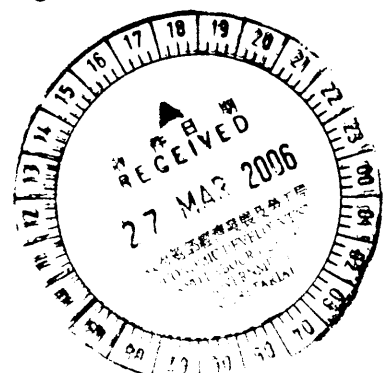

As stated by the Government, reliability of electricity supply is very important and the focus of the future electricity market development should be on maintaining reliability. I fully agree with the Government's position. But, the proposed changes in the consultation paper such as reduced permitted return and shortened regulatory period will have negative impact on the reliability of electricity supply. I am afraid that there might not have sufficient investment in electricity infrastructure after financial incentive to the power companies is reduced and the risk of investment is increased in Hong Kong such that supply reliability might be affected.

I suggest the Government to evaluate the proposals in the consultation paper with caution, so that Hong Kong will continue to have an adequate and reliable electricity supply.

Yours faithfully,

Sandy Wong

Subject: Clean the Air - Urge immediate action!!!!

☐ Urgent ☐ Return Receipt

29/03/2006 09:53

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. Demand management must be built into the profits of the company. There must be a mechanism where they profit if they can significantly reduce energy demand. At present they only profit from Increased demand.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

Mar. 2, 2006

Dear Sirs,

COMMENTS ON FUTURE DEVELOPMENT OF
ELECTRICITY MARKET IN H.K. STAGE II CONSULTATION

We are the branch office of a major Japanese electrical construction company in Hong Kong. We had gone through the Stage II Consultation Paper and we have the following comments.

As a commercial company and also an electricity consumer, we consider that highly reliable electricity supply is most essential to sustain business development and for our daily lives. The reliability of electricity in Hong Kong in the past, under the current scheme of control, is excellent compared with other areas in Asia and all over the world.

We have to pay our electricity bill and would naturally wish to have lower electricity rates. However, with the highly reliable electricity supply in HK and the excellent services provided to us, we reckon that the electricity tariff in HK is reasonable.

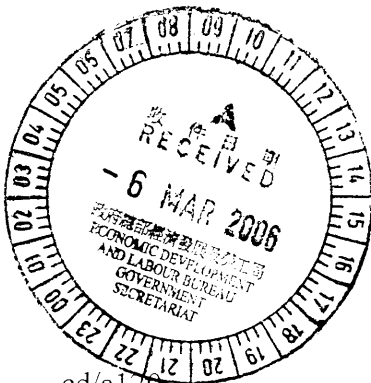

Hong Kong is a financial centre and reliability of electricity supply is very important. The importance of reliability should be rated above prices. If the rate of return is set to a unfairly low level, the power companies will stop their investment in their plant and equipment. It will lead to degradation of electricity supply reliability. This low reliability will ultimately affect our daily life and the business environment in HK.

In conclusion, we wish the present state of high reliability of electricity supply to maintain and the electricity companies should be given the reasonable of return in the future.

Yours faithfully,

SANKO SETSUBI CO., LTD.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of the electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
- 7.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

經濟發展局局長：

對於香港電力市場未來的發展諮詢，本人有小小意見。

~~電力~~ 本人覺得電力的可靠很重要，此之門戶力價更甚。因為電力已成為現代人生活的重要部份，一旦電力不穩定，會造成生活上很多的不方便。

倘若開放了市場而對電力可靠性造成威脅，本人極之不贊成。

這几天，環保是一個熱門話題，也是一個我很關注的問題。請問倘若開放市場后，如何監管超過一間電力公司環保管制的措施呢？

再提提呀，只有兩間電力公司，本人亦無意見也。下電。所以請在考慮未來發展方面，考慮環境的運作，不要因為政策而改變。也希望釐定下制條，令2間電力公司有壓力，條件繼續經營。例如年期和長短，回報率的上限等等。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

P.S. I MOVED BACK TO HONG KONG FROM BEIJING IN PART BECAUSE OF AIR POLLUTION, BUT NOW WONDER IF IT IS ANY BETTER IN HONG KONG. AT LEAST IN BEIJING THERE WAS A SENSE OF COMMITMENT TO IMPROVING THINGS. IN HONG KONG IT SEEMS TO BE A VERY LOW PRIORITY.

EVERY DAY IN MY MEDICAL PRACTICE, I SEE PATIENTS, ESPECIALLY THE VERY YOUNG AND THE VERY OLD, BUT INCREASINGLY THOSE IN-BETWEEN AS WELL, SUFFERING FROM RESPIRATORY PROBLEMS THAT ARE LIKELY WORSENERD IF NOT CAUSED BY THE TERRIBLE AIR QUALITY.

I AM SADDENED TO LOOK OUT THE WINDOW AND SEE, INSTEAD OF THE MAGNIFICENT HONG KONG RIDGELINE, A BROWN BLANKET OF SMOG. HOW CAN WE SELL TOURISM TO THE WORLD WHEN OUR BEST ASSETS ARE RUINED LIKE THIS?

WHAT WILL IT TAKE?

WILL ANYTHING GET THROUGH TO GOVERNMENT, POWER COMPANIES AND OTHERS WHO CAN MAKE A DIFFERENCE?

THIS MATTERS!!IT CANNOT BE DELAYED.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen and a parent with children growing up in a city, I am very much concerned about the increasing air pollution caused by the power stations and coming from factories in China.

I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

I believe that the only way anyone will do something about reducing the dirty air in Hong Kong is when tourists stop coming to spend their money. Only then will anyone take notice, but not because it's unhealthy and dangerous for the people that live here, but because of lost revenue.

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

Subject: 我要清新空氣

☐ Urgent

☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Stage II Consultation of Electricity Market of HK
☐ Urgent ☐ Return Receipt

Dear Sir

Please find below my comment and opinions concerning the above consultation

1. The proposed permitted return of 7-11% is unreasonably low. This unreasonably low return adversely affect the long term investment incentive of the power companies. This in turn will adversely affect the reliability and availability of electricity supply.
2. The proposed linkage between Permitted Return and emission target achievement is not reasonable and not very logical. The Air Control Ordinance has already been imposing control on the emission standards. Emission standards incur additional investment and running cost. This regime may increase the investment risk of the supply companies and may adversely affect the tariff and investment. The majority of air pollutants is come from the mainland. Just slightly improving the emission standards of the power plants do not has noticable improvement in the air quality in Hong Kong. In addition, the measuring mechanism will be very complicated and not practical to implement.
3. I agree to adopt bilateral agreement between the Government and the power companies. This regime is simple and easy to implement. Yet it has been very effective with low administration costs
4. I do not agree to the proposal of requiring government approval for tariff adjustment. Adoption of this regime is very dangerous to and not logical for an open market. Should this proposal be adopted, the tariff may be subject to undue influence by politicians increasing the risk of investors. In addition, this will form a precedent case of "Government Influence" on private company to which I totally disagree.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

27/03/2006 09:39

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 我要清新空氣
☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Clean air

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very concerned (and frankly, ashamed) about the air pollution caused by the power stations, and other sources. I demand that the Government enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities.

I endorse the recommendations made to you by the committed and capable people at Greenpeace and Clear The Air, who work tirelessly to help us breathe.

I have lived in Hong Kong for 25 years and recently did what I thought I would never do - I advised a family not to move here from UK to take up 2 professional jobs, as I felt that to not do so would be irresponsible of me. They have 2 young children and they took my recommendation. I have been campaigning for clean air since 1999, can you blame me for being disheartened?

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air. There is a great deal of frustration and sadness, shame and embarrassment - we are a rich country with a rich heritage, but at the same time we are an eyesore and at the receiving end of incredulous disbelief from around the globe, that we cannot seem to do anything about one of our most basic rights in life - clean air. Come on!

I look forward to hearing from you.

Yours sincerely,

Sarah Wong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 我要清新空氣

☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

scott callender

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a resident and new father, I am ashamed and tired of the inaction of the government to remedy the air pollution problem. This issue is an embarrassment to Hong Kong and the PRC. There are far too many excuses and too little action, and the arrogance of the large companies is appalling. Especially bothersome are the transparent and insincere attempts by the power companies to market their "green" attitudes while holding off installing proper upgrades to their plants to reduce emissions.

I cordially demand the SAR government to remedy this situation, for my new son's health and for the sake of your own family's health.

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

I was watching TV the other night. There was a travel show on, you may have heard of it: 'Lonely Planet'. This organisation is one of the biggest and most respected in the travel business.

The programme covered the usual: The Peak, TST waterfront etc etc, and, unusually for travel programmes about Hong Kong, a visit to Sai Kung. However, the common theme that prevailed throughout the whole show was the 'disgusting' (their words) quality of the air here. Almost every local that the show's host encountered was asked about air pollution, not their business, or about the wonderful city that is Hong Kong, but the air pollution. The host was fixated on it. Think about how many people have watched that show or read their books. How much is this sort of press costing us?

My family and I have lived here for 6 years. We are thinking about leaving. We don't want to leave. Both our boys were born here. We love this city and think of it as home. The problem is our two boys suffer from asthmatic symptoms, which miraculously disappear whenever we return to Malaysia or New Zealand, our countries of origin. I love running the trails here, around Hong Kong island and Sai Kung. After about 2 hours, I usually have to stop, because I have difficulty breathing and tightness in my chest. Again I have never experienced this overseas. Only here. Our health is important to us.

Please consider the opinions expressed in the emails you receive seriously. I have received many emails from colleagues and friends, local and foreign, asking people to express their views. This is one issue where the decisions you make are of enormous value to the people who live here, and people care about the quality of their air.

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

sean tracey

Subject: Air Pollution in HK

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

I have lived in HK for most of my life and have just planned to return after being away for 2 years. After being back for just a few weeks I am beginning to reconsider. It is sad to see our city becoming more and more polluted. How can we raise our families in such a place where children cannot go outside or face serious health risks if they do? If this continues we will never see the sun anymore. Is this what the government wants for the future of Hong Kong?

2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Future Development of the Electricity Market in HK - Stage 2
☐ Urgent ☐ Return Receipt

Dear Sir/Madam,

I would like to give my points of view in accordance with the Consultancy Paper on Future Development of the Electricity Market - Stage 2.

I think that the electricity fare in Hong Kong is not so high with such a high reliability and consumer services. I cannot imagine what will happen if there is a breakdown of electric supply in Hong Kong. Actually I think it is worth to pay more to deal with the environmental problems that we are encountered. To cope with environmental pollution is not just the responsibilities of a certain people or companies, it is the responsibilities of all of us.

Thank you for your kind attention.

Yours faithfully,
S.F. Ng

Subject: CLP's views on Government's Consultation Paper - Stage II Consultation

30/03/2006 22:05

☐ Urgent ☐ Return Receipt

As one of the shareholders, I fully agreed with and supported CLP's views and responses on 30 March 2006 to the Government's Stage 2 Consultation on the future Development of the Electricity Market in Hong Kong.

The Consultation Paper proposes the changes after 2008 should be clear and practical. The investment to improve the environment should not be disincentivised with a lower rate of return. A clear proposal and arrangement how to transit to an open market with new players should be planned not to disorder in the market. The proposed duration of the regime to 10 years is too short. It could not properly reflect the lifespan of the investment in the electricity industry. Reduce the return level would increase the risk and cut down the shareholder value.

We expected that the Power Companies would work actively and closely with Government to address the concerns. We hoped that the new regime achieved could strike appropriate balance for all stakeholders including the Government, the Customers, the Shareholders and the Society.

Subject: 回覆： Future Development of the Electricity Market in Hong Kong
每 Stage II Public Consultation 販誠?薯序 帑 腔追程 每 菴媼戴廖
鼠?烷?

☐ Urgent ☐ Return Receipt

Dear Sir

I have the following comments on the "Consultation Paper on Future Development of the Electricity Market in Hong Kong Stage II Consultation":

1) Paragraph 2.23, I consider that interconnection could certainly reduce the need for new generation facilities. From the recent much higher tariff from HEC than CLP Power, it is evident that the consumers in Hong Kong side could not enjoy the benefits from economy of scale resulting from interconnecting the networks from the two power companies. Obviously, the power companies would dislike this idea because this would reduce their investment on their plants and hence their revenue. Therefore, the power companies would make a number of excuses to show the shortcoming of the interconnection, e.g. adverse effect on the reliability and stability to their systems etc. These reasons appear too technical such ! that the general public become threatened by the issue. I believe the Government should explore the issue of interconnection by commissioning independent specialists to review the actual situation to see if it is workable or not.

2) Paragraph 2.33, the present SCA is not effective since it gives low bargain power for the Government in the period of economy recession. The recent unilateral and successful increase of tariff by HEC despite a lot of negative responses from the public indicates that the present SCA is not effective as far as the Government's regulatory is concerned.

3) Paragraph 2.56 on the "Permitted Rate of Return", it should be no more than 10% in view of the extra low risk of the business (7 to 9% should be considered).

4) Paragraph 2.61, I consider that the tariff should be linked to local economic indicators (either directly or indirectly or to a! certain portion) to reflect that it is compatible with the daily living with the general public. While it is noted that the equipment and fuel are mainly imported from overseas, this is in fact up to the power companies to source the equipment either from overseas, locally or mainland China, the risk should be borne by the power companies. As Hong Kong citizen, we should only concentrate on local economy which is already influenced by the international market since Hong Kong is an international city. Also, I consider that the tariff should only be revised once per year in order to reduce the disruption to the public.

5) I am supportive of other proposals.

Regards

S H Lee

Subject: ☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong resident with two young children, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand that the SAR Government bring back clean air to Hong Kong. The lack of action in this area to date is disgraceful. My family and I need a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Shana Hennessy

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

P.S. Just a footnote - my husband and I have had coughs since December - if we stay inside, we feel much better. If we have a day out and about in HK, we find we're much worse. We live in DB and look over towards Mui Wo - the number of days that we simply cannot see more than a couple of miles, due to a brown haze, is simply unbelievable. We have lived in HK for eight years, and truly believe that the pollution level is getting worse and worse.

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

I have lived in HONG Kong for 10 years and have watched the quality of air change dramatically in the past 2-3 years. I miss the blue skies that made the South China Seas appear magical. I am saddened by the fact that I rarely can see the skyline as I travel from the South part of the island to Shatin everyday via the Eastern Corridor and Tunnel. Most importantly, I have been through 2 hospitalizations with my youngest son for asthma that have always come days after high API levels. Our family's medical bills have soared over the past few years because of multiple visits for three of us that have developed asthma the past 5 years. Hong Kong is dying a slow death - please save our children!!

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

29/03/2006 21:26

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: We want clean air!
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Sharon

Subject: Comments on Stage II Consultation

☐ Urgent ☐ Return Receipt

I wish to provide my comments on (1) the duration of agreement, (2) return level and (3) opening of electricity market.

(1) Duration of agreement

The current agreement with a 15-year duration has been operating effectively, and resulted in a reliable electricity supply at reasonable price. Reducing the duration to 10 years is too short to provide incentive to the electricity companies to maintain the current level of investments and thus reliable electricity supply. I support renewing the agreement with a 15-year term.

(2) Return level

The current return level is reasonable. Hong Kong citizens have been enjoying a relatively low cost electricity supply as compared to other big cities. Reducing the return level to 7-11% will not support long-term capital investments to provide reliable supply at reasonable cost. I support continuing the return level at the current 13.5-15%.

(3) Opening of Electricity Market

The plan to open electricity market in the future will hinder the current electricity companies to make long-term planning and investments. This will have negative impacts on the reliability of electricity supply. I am very satisfied with the performance of the current electricity companies and don't see any need for market opening.

Subject: [Possible SPAM] Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Sincerely,
Sheila L.

Dear Sir,

Stage II Consultation on Hong Kong's Future Electricity Market

I understand that the government is conducting a consultation on Hong Kong's future electricity market. Please find below my opinions on the subject.

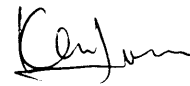

Working in the finance industry, I find that the government's proposal in decreasing the power companies' rates of return to 7-11% is quite unreasonable. Extensive capital investments in their facilities are required from the power companies in order for them to provide a safe and reliable power supply to their customers. If the rates of return for the power companies were only 7-11% (the lowest 7% is even lower than today's prime rate), why would they still invest in their facilities? I think the rate of return for the power companies should be raised so that the power companies will have the necessary incentives to continue to invest in the industry.

Besides, the government proposes to give different rates of return to different types of assets of the power companies. I find this quite difficult to understand. All assets are raised under the same cost of capital. Why should the assets be categorized and given different rates of return? Nowhere in the world seems to be using this method. I think the current

method in calculating the return for the power companies is most appropriate and should not be changed.

I hope you could appreciate my views above.

Subject: 我要清新空氣
☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Comment on Stage II Consultation on Future Development of Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Dear Sir,

With regard to the government's proposed arrangement for the post-2008 electricity market in Stage II Consultation Paper launched on 30 December 2005, I have the following comments for your consideration.

- (1) It is definitely true that the current electricity market in Hong Kong is performing very well in terms of reliability, especially much better than other major countries/cities in the world like China, India, Seoul and Sydney, etc. I have solid experience to stay in these countries having unreliable electricity which make me feel very inconvenience and unsafe. So, I indeed very much appreciate the existing electricity company in Hong Kong which allow me to enjoy reliable, safe and efficient energy supplies at reasonable prices.
- (2) Majority of my monthly expenditure are spent on housing and transportation. Current electricity expenses are minor and acceptable to me as compared to housing, water, transportation, food and town gas.
- (3) Government should be very careful to review the permitted rate of return to ensure that it is not too low to attract long-term investment required by the power companies. I think it is fair to allow sufficient rate of return to power companies to cover their challenges and non-diversifiable risks in the electricity market.
- (4) I believe the current 15-year regulatory period is reasonable. I am afraid shorten of the said period from 15 years to 10 years may dampened investor's incentive to invest in the power companies. From investor's point of view, return on any investment in a long-term service-life infrastructure, say 30 years, may still be negative in the first 10 years of operation.

Being one of the consumers, what we expect is a reliable, safe and excellent service of electricity supply. I hope the government should be very careful when reviewing the existing Scheme of Control Agreements and should not have major adjustment which may have great impact on our life.

Regards,
Shek Sze Lok

Lower Albert Road, Central,
Hong Kong.

Dear Sir,

Please find below my comments on some of the proposals in your Consultation on the future electricity market.

Firstly, I am fully satisfied with the existing quality of electricity supply services. While a lower tariff is always welcomed, I find the present tariff reasonable when compared with those of many other cities. However, an adequate and reliable electricity supply is more important to Hong Kong than anywhere else as Hong Kong has the most number of high rise buildings in the world. Therefore, I cannot agree with some proposals contained in your Consultation Paper. Among the many proposals, the ones that I have most concern are:

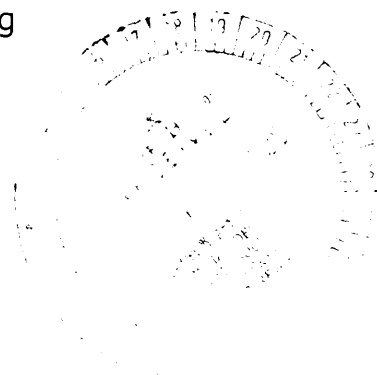

- A reduced permitted rate of return
- Different permitted rates of return for different assets
- A shorter regulatory period

In my opinion, these proposals can be hardly feasible as they imply higher operating risks to the power companies and the power companies will decrease their investments in their electricity supply infrastructures, which in turn jeopardize the reliability of power supply in Hong Kong. I urge the Government to reconsider these proposals and come up with a mutually agreeable regulatory framework with the power companies.

Yours sincerely,

Shelia Tang

Subject: Clean Air

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. Demand management must be built into the profits of the company. There must be a mechanism where they profit if they can significantly reduce energy demand. At present they only profit from Increased demand.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Shelley Liu

Subject: Consultation Paper on the Future Development of the Electricity
Market in Hong Kong

☐ Urgent ☐ Return Receipt

Dear sir,

Please find attached our comments on the above.

<<chr.pdf>>

Ananda Arawwawela
Managing Director
Sheraton Hong Kong Hotel & Towers

chr.pdf

March 31, 2006

Mr. Ip Shu-kwan, Stephen
Secretary for Economic Development and Labour Bureau
Economic Development and Labour Bureau
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road, Hong Kong

Dear Mr. Ip,

Stage II Consultation Paper on Future Development of
the Electricity Market in Hong Kong

I am writing in connection with the captioned consultation paper. As a hotel operator, I have grave concerns over some proposed arrangements set out in the Paper which would definitely have a material impact on the hotel industry.

- a. Basically, we support the bilateral agreement structure similar to the current Scheme of Control Agreement regime for regulating the power companies after 2008, and the current institutional setup to monitor the power companies seems to work well. We believe such institutional setup should be retained for the post-2008 regime.
- b. As a member of an international hotel chain, our hotel has been offering the entire spectrum of comforts to serve the needs of both business and leisure travelers satisfactorily. The stable and reliable electricity supply in Hong Kong is one of the crucial factors to our success in Hong Kong. Loss or interruption to the electricity supply means loss of almost all essential services. We cannot imagine what would be the consequence if we had even one minute of power supply interruption. Any power interruption will not only affect our hotel's operation, but also tarnish the image of Hong Kong as Asia's world city. However, the extremely reliable electricity supply Hong Kong citizens are enjoying may soon be dampened by the Government's proposal to reduce the present rate of return of the power companies from 13.5% to 7%-11% after 2008. Such reduction may definitely discourage investment in the electricity industry and affect the supply reliability in the future. Adequate return on investment is an incentive for power companies to maintain the current high level of supply reliability.

..../2

March 31, 2006

Page 2

- c. Introduction of new supply from China is a choice that must be evaluated with caution. Since the air quality of Hong Kong is much affected by the emissions in the mainland, especially the PRD, importing electricity from China will probably worsen the air quality in Hong Kong since mainland power plants are in general far more polluting than the ones in Hong Kong. Poor air quality already is an issue to the Hong Kong tourism industry. Moreover, as learnt from newspapers, the Mainland power plants themselves cannot be relied on because of their poor track record in supply reliability. Importing supply from the Mainland will jeopardize Hong Kong's supply reliability.

Considering the excellent services, no matter in terms of customer service or reliable electricity supply, we do regard the existing tariff is value for money. We do not want to see any blackout in future in consequence of an attempt to lower the tariff by a few cents a unit. The present outstanding electricity supply infrastructure is one of our competitive advantages over overseas competitors. Hong Kong is renowned as a world-class financial centre, the contribution of stable electricity supply is absolutely undeniable. We would therefore urge the Government to take into consideration our comments above for the benefit of Hong Kong as a whole.

Yours faithfully,

SHERATON HONG KONG HOTEL & TOWERS

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Air is very important to be alive.

Breathing starts when we are born and ends when we die.

So for the basic life quality of all animals in our area, this needs to be addressed.

It's like water being clean.

We are not only giving Hong Kong, which is first rate city in Asia, a level of third world in quality of air, but everyone who visits notices this sad and unhealthy problem.

If you breathe, you would think this would be an important issue.

Imagine how popular you would be by the public, everyone breathes.

☐ Urgent ☐ Return Receipt

Dear Sir

Here attached as my opinions for the captioned.

Regards

Sherry Chiu

Doc1.doc

致經濟發展及勞工局局長

根據政府對香港電力市場未來的發展第二階段諮詢文件的建議，本人同意政府要求以合理的價格提供可靠、安全而有效率的電力供應，但對於以下幾個範疇有不同意的見解：

- 推行環保的安排
 - 香港地少人多，地理上不及外國，可以大規模地發展天然能源發電，如天然氣、風力等，因此，香港大比數的發電方法是燃煤發電。所以政府應就香港長遠的發電燃料組合制訂明確的方向及配合政策，而這些標準不能任意訂立，必須配合能源政策。
- 規管協議年期
 - 對於政府的建議，本人覺得太短，因為所有投資都是長遠投資，不論所有發電機組、廠房、環保設備、人力資源等等，都不能以短短十年時間去計劃。
- 回報率
 - 政府建議將回報率大幅度削減，本人覺得只影響投資者的投資決定，這直接影響電力公司的營運資金。

基於本人以上的意見，反對政府所提出的建議，望審慎考慮。

此致

祝 工作愉快!

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Dear Mr. Ip,

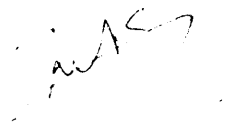

Future Development of the Electricity Market in Hong Kong
Stage II Consultation

Please find below my comments on the government's stage II consultation paper:

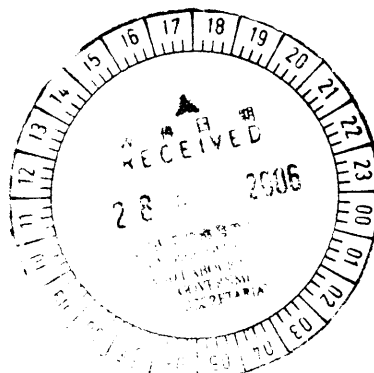

- The 7% – 11% rate of return is unattractive to electricity investors. This low rate of return will fail to induce investors to invest in infrastructures that are necessary for supply reliability. As supply reliability is something cannot be compromised, this proposal should not be implemented.
- The 10-year regulatory framework will not be long enough to protect investors from risks since the electricity industry is capital intensive with many long-life assets.

Your consideration of my comments above is highly appreciated.

Yours sincerely,

Shin Wai Shing

Dear Sir,

On the future direction of the electricity market in Hong Kong, I would like to share with you my views as follows.

I think that for the overall benefits of Hong Kong, the Scheme of Control regulatory regime, in its present form, should be maintained after 2008. With the supply reliability high and the tariff reasonable and affordable, why should we be bothered to change? While open market and deregulation have been much touted by the overseas markets, there are more failures than successes. As a small economy with little natural resources, we shouldn't be following the steps of the overseas markets and particularly shouldn't make changes for the sake of changes.

For the long term benefits of Hong Kong, I hope that the Government can maintain the status quo of the present electricity market after 2008.

Yours sincerely,

Dear Mr. Ip,

Stage II Consultation of the Future Electricity Market in Hong Kong

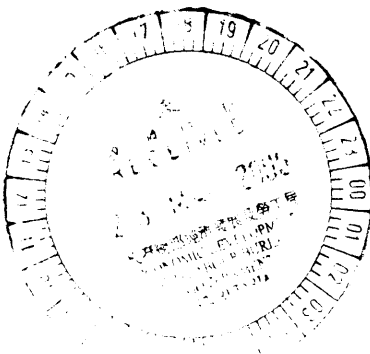

After reading your consultation paper on the future development of the electricity market in Hong Kong, I have the following comments:

The existing regulatory framework for regulating the power companies in Hong Kong is working very well nowadays and I don't see why we should change it in any way. In particular, if the government proposes to reduce the rate of return of the power companies to 7-11% and shorten the regulatory period for the agreements signed with the power companies to 10 years, this would lead to under-investment by the power companies. As the assets of the power companies have long asset life, reducing the power companies' rate of return and shortening the regulatory period greatly increase the power companies' risks in their future investments. Thus the power companies may not invest in their electricity supply infrastructures anymore and the reliability of electricity supply of Hong Kong will be affected. I think the government should consider seriously the effect of these proposals.

Yours faithfully,

Shirley Lam

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Dear Mr. Secretary,

I would like to submit my responses to the Stage 2 Consultation Paper as follows for your consideration.

Sufficient incentive should be provided for investors to encourage them to continue their investment in the electricity sector so that the current reliability level will not be jeopardized in the long run. The proposed shorter regulatory period of 10 years and lowered rate of return to 7-11% will certainly violate the above "free market rule".

Moreover, to further improve our air quality, the government should provide equal incentives for all effective emission mitigation measures including renewable energy and emission reduction facilities. Providing the lowest rate of return of 7% to emission reduction facilities does obviously penalize such investment. Hence, the proposal of 4-tier rates of return applied to 4 different assets types should be discarded since it cannot help improving our future air quality.

Yours truly,

Shirley Lim

Dear Sir,

Comments on
Stage II Consultation

Your Stage II document has set a right direction for the future electricity market. However, in order to achieve your policy objectives, some of your proposals need to be reconsidered in order to ensure that investors will continue to invest in Hong Kong's electricity industry, and in the environmental facilities to improve the air quality.

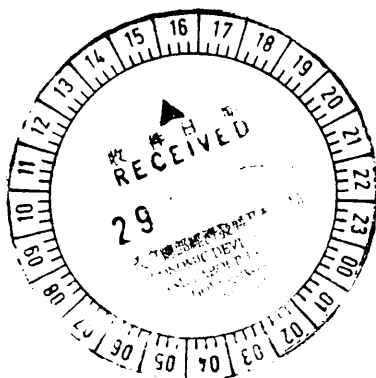

The short regulatory period of 10 years is the first barrier to investment because electricity infrastructure requires capital intensive investment and has long life. How would one invest in it if it has only 10 years of certainty to earn a return, and a big uncertainty in the subsequent 20 to 30 years.

The second hurdle to investment is the 7 – 11% return rates. Are these rates really attractive for investors to put in money that can be locked up in 30 to 40 years? Besides, the 7% return on environmental facilities is too low and thus cannot attract investment to help mitigating the air quality problem.

Yours sincerely,

Shirley Shek

Subject: Electricity Market after 2008 in Hong Kong
☐ Urgent ☐ Return Receipt

To: electricitycommentstage2@edlb.gov.hk
19 March 2006

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road, Central,
Hong Kong

Dear Mr. Secretary,

Stage II Consultation of Future Development on the Electricity Market

In response to the Hong Kong Government's Consultation Paper on the future of the electricity market after 2008, I would like to give my view from the perspective of a consumer.

I am a business analyst working for an investment bank in Australia. I migrated with my family when I was eleven years old. Being a Chinese Australian, I still have close ties with Hong Kong and I spend my holidays in Hong Kong from time to time. As such I believe I am in a very appropriate position to speak about the state of electricity supply in both countries.

As far as I can remember we have never had any problems with power supply in Hong Kong. I never experienced any blackouts, any power surges as a result of the fault of the electricity company. I can't remember a time when I got stuck in the lift because of power failure in Hong Kong. In fact we all take a constant supply of electricity for granted and we never have to worry about power failure. We never had a backup torch at home in Hong Kong.

Here in Australia power supply is never as reliable, especially in summer. Power failure and power surge is quite frequent in Sydney area and in Victoria. I don't have to elaborate on the nuisance caused by power failure.

Power surge is equally annoying. It causes damage to electrical appliances, for example, the life span of electrical globes is much shortened. They need to be replaced two to three times more often than in Hong Kong.

As consumers, our main concern is reliability of supply rather than lower price. In an affluent society, who cares to pay a little more to secure better service? Moreover it has been demonstrated that open competition does not necessarily guarantee lower price. Electricity is a unique commodity and electricity generation is a huge industry that calls for billions of investments and takes a long long time to pay back. The lesson we have learned from open competition in Australia is clear. There are too many players in the market. They are there to maximize their profit in the short term. There are too many uncertainties in the market that they do not have much incentive to invest in the long term, to upgrade the network and to bring in new technology. On top of the confusion caused by the so-called market forces are politicians and pressure groups who have no long term vision of the industry

but their private agenda in mind.

I sincerely urge the Hong Kong Government not to follow in the footsteps of the Australian Government in the electricity policy. The Hong Kong public has

so far enjoyed a high standard of electricity service that they never really

experience what it was like to get stuck in the lift, to spend the whole evening in candle light, or having to replace their electric globes every now

and then etc... In short, the system in Hong Kong has not broken down and it does not warrant drastic changes. Some of the proposals in the Paper will cause confusion rather than improving the mechanism. In particular, the proposal to apply different rates of return on different categories of assets

is a rather bold idea. With respect, I would think that the reform should include more certainties for the investors to make long term investment in the

electricity industry, to reduce pollution and most important of all, to maintain a reliable supply at a reasonable price.

Yours sincerely,

Shirley Wan

敬啟者，

對於現階段的電力市場檢討諮詢文件，本人有以下意見：

作為一個電力公司的用戶，最重要當然是其供電之可靠性。其實，香港現時的電費已不算貴，只是佔本人日常支出的 4 %，本人寧增加電費，都不希望電力公司的供電不穩定。

另外，若將利潤管制調低至 7-11%，對投資者來說，回報率極不吸引。政府其實又怎樣訂定這個百分點呢？

最後，本人認為政府絕不應該在此階段改變現狀，應以各方利益著想，共同磋商一個彼此都滿意的方案。

Subject: Electricity Market Future Development in Hong Kong

☐ Urgent ☐ Return Receipt

To whom it may concern,

In general, I felt ok on the tariff of electricity with considered the stable electricity supplied from the past years. In the future, I still think that stable electricity supply to Hong Kong should be the first consideration. The emission quality improvement should also be considered in this review and some incentive scheme may be applied to motivate the suppliers do more in this area.

Best regards

Shirley

17 March 2006

Mr. Ip Shu Kwan
Secretary for Economic Development and Labour Bureau
Economic Development and Labour Bureau
2/F, Central Government Offices, Main & East Wings
Lower Albert Road,
Central,
Hong Kong

Dear Mr. Ip,

Future Development of the Electricity Market in Hong Kong
Stage II Consultation

I would like to express my views on the Stage II Consultation of Future Development of the Electricity Market in Hong Kong.

Hong Kong is a famous world financial centre. Nearly all people in Hong Kong work and live in thousands of high-rise buildings. Highly reliable electricity supply is vital to Hong Kong. I have been enjoying reliable electricity supply and have not been affected by power outages. However, in your Stage II Consultation paper, you have proposed to shorten the regulatory period from 15 years to 10 years and reduce the rate of return from 13.5% to 7-11%. I am afraid that your proposals will increase the investment risks of the power companies and disincentivize their long-term investments in their electricity supply systems.

Without adequate investment in electricity infrastructure, the reliability of electricity supply will deteriorate. With loss of electricity supply, all commercial activities and essential services such as lift, air-conditioning, lighting, MTR, train, light railway and trams will be interrupted. The situation of loss of electricity supply will be chaotic and the financial loss will be enormous.

I have the opinions that the government should maintain the 15-year regulatory period and increase the permitted rate of return so that the power companies will keep on investing in the electricity infrastructure to maintain the existing level of supply reliability.

Yours faithfully,

A handwritten signature in black ink, consisting of stylized, flowing cursive letters that appear to read 'Shiu Chung Hang'.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》
☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 - 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: 香港電力市場的未來發展諮詢

☐ Urgent ☐ Return Receipt

29/03/2006 00:03

經濟發展及勞工局葉樹坤局長：

目前政府把電費放在第一優先，政府在第二輪諮詢文件提出的建議，包括(1) 縮短利潤管制年期，由15年減至10年；(2)降低准許回報率至7%至11%，(3)另外政府又認為開放電力市場引入競爭，可逼使電力公司減電費。

本人就以上諮詢有以下意見：

(1) 投資發電，是一個30年的過程，兩間電力公司買煤同買天然氣，採購合約長達25年才能盡用優惠價，中電的大亞灣核子發電廠同樣道理，以10年為管制期，請問叫電力公司如何規畫長期投資？如何做風險管理？本人認為維持15年(即兩電的要求)應是最佳年期，強行減少年期雖然贏得民意，但實質對各方都帶來害處。

(2) 政府認為開放電力市場引入競爭，可逼使電力公司減電費。我認為引入競爭不一定帶來好處，還會使供電質素，穩定電力和服務水平嚴重下降，用戶實質利益受損。隨便舉個例，香港的電訊市場開放後服務差到冇譜，投訴倍增。電訊收費減小了有什麼甚用？市民的電訊開支還不是急升幾倍至十幾倍，電訊公司個個賺錢。又根據英國的開放電力市場經驗，幾家電力公司因應油價和天然氣價的上漲，大幅度調高電費，反證了開放競爭不等於減電費。相反負面例子如美加大停電，歐州大停電，例子不勝枚舉。

(3) 倘若電費真的是減了，除了帶來很多負面問題外，本人認為會激發市民用電量急升，電訊業相關經驗是好例子。但電力不同電話，用電量急升更加破壞環境和耗用地球寶貴的資源。因此本人認為逼使兩電減價並非上策。

(4) 香港的空氣質素每況愈下，本人認為將減排設備回報率降低至7%極不恰當，因這有違促進改善環境的目標。由於使用天然氣較潔淨，本人支持政府要求兩電加速增加使用天然氣發電。如果電費因此而增加些少，應該！本人十分支持！

HK Electricity Market Consultation Stage 2.doc

11 March 2006

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road, Central,
Hong Kong

Dear Mr. Secretary,

Stage 2 Consultation of Future Development on the Electricity Market

Though I am a retired energy economist/engineer who migrated from Hong Kong to Victoria, Australia in 1993, I still maintain close concerns on matters happening in HK. I visit HK several times a year and follow on news through the internet. During my recent visit to Hong Kong, I was told by my ex-colleagues that the Government is now seeking views from the public as to how the electricity market after 2008 should be reformed. With my 30+ years of experience involving in the electricity sector of both Hong Kong and Australia, I feel obliged to offer you my views on some of the proposed changes in your Consultation Paper.

One lesson learnt from comparing the electricity supply service in Hong Kong with that in Australia is that: there is no free lunch. The series of outages in last summer here speaks for itself. While back in Hong Kong, electricity supply has been something that I could always take for granted; unfortunately it was no longer the case in Down- Under. My nightmare started since the electricity market deregulated in mid 1990s. While deregulation had promised us cheaper electricity and more choices, in reality it only brought us blackouts and erratic prices. In a time of uncertainties brought forth by deregulation, the investors have been unwilling to invest in the necessary infrastructure for generators and networks, causing threat of insufficient supply of electricity every summer. Unlike in the past where all the suppliers have been fully committed to provide electricity on a perpetual basis, nowadays all that they want is to make a few fast bucks. This lack of heart commitment and adequate investment explains the blackouts in recent years. To have reliable electricity supply, the first and foremost requirement is investment. Electricity supply needs investment that in turn needs incentive. There must therefore be sufficient financial incentive offered to the suppliers in order to secure

reliable and sufficient power supply. Not rip off but just sufficient incentive. Tell from our Australian experience, a return in the range of 10 – 15% can barely be enough to keep the investment coming. My words of advice to Hong Kong are therefore: make sure the lights will be on uninterrupted by providing sufficient incentive to the power companies.

In the Consultation Paper, the Government has also proposed different return rates for different categories of assets. I believe such thinking is unheard of not only in Australia but anywhere else in the world. As a responsible government, you cannot simply please the environmentalists by penalizing the power companies for producing electricity. While you may think that such a proposal is ideologically sound to encourage renewable energy sources (RES) and disperse emission reduction facilities (ERF), it is neither valid nor fair in practice. From the user perspective, both RES and ERF should be treated the same since both are means adopted to improve air quality. From the investor perspective, RES and ERF are likewise the same as they both require capital investment. The result of which will cause argument between parties concerned and additional administration. In addition, if it is such a wonderful idea, why hasn't it been adopted by any other regulators? Why should Hong Kong choose to be a forerunner to tread the untreaded path?

While the Chief Executive has stressed on stronger governance on many occasions, I think strong governance does not mean bullying the power companies into accepting some unfair and unreasonable terms and conditions. Strong governance can only be shown by making the right choice rather than the popular choice. The general public and the political parties always demand a reliable and pollution-free supply of electricity at a low price. But it will be up to the Government to decide whether such demand is reasonable and achievable. The important international financial position of Hong Kong cannot afford the risk of power interruption, not to mention blackout!

Yours truly,

Shunam Ng

Consultation Paper on Future Development of the Electricity Market in Hong Kong

Dear Sir,

It was with a great interest that we reviewed the document on Future Development of Electricity Market in Hong Kong and we feel very honoured to submit herewith our views and comments on such an important issue, from a Power Transmission & Distribution perspective.

As far as we understood, it is in the intention of the Government of Hong Kong to renew substantially the legal framework for regulatory arrangements of the electricity market. Indeed we are not in a position to interfere in the elaboration of Energy Policy of the Hong Kong community which might include definition of the energy supply mix or building up strategic relationships with Mainland on the electricity supply side.

However a few aspects related to the Transmission & Distribution Grid, aspects that are already outlined in the document, are important in our view. This covers interconnections between adjacent power grids as well as improvement of performance:

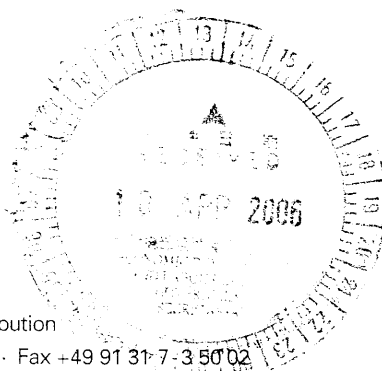

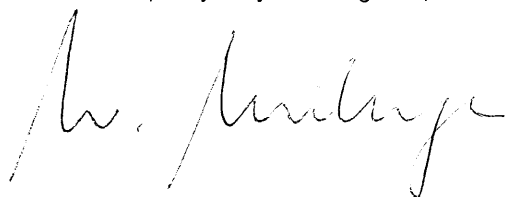

- **Power Quality.** Hong Kong benefits to a large extent of an excellent reliability in electrical power delivery. Assessment of any future scenario should be aiming at maintaining this outstanding existing performance.
- **Return on Investments.** A safe and secure energy grid can also be maintained through improvement of existing T&D network. A lower rate of return on T&D assets might hinder the opportunity to invest in building a stronger electrical network.

As you are aware of, SIEMENS PTD is very active in the Hong Kong electricity market, being awarded prestigious projects with Hong Kong Power Companies. Such collaboration is of utmost importance to us and we are willing to continue contributing in our way to the future of Hong Kong electrical grid.

This collaboration can take the form of participating together with the Government experts as well as with the two power companies in assessing the different programs mentioned in the document for example in enhancing interconnections, be it between the two power companies or with Mainland utilities. Another area where Siemens PTD can strongly support the Hong Kong Government is in Performance Improvement in such fields like operational efficiency and service quality.

Having no doubts that this very important reform will be lead through to the best satisfaction of all stake-holders,

Please accept my very best regards,

28 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Sir,

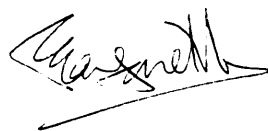

Future Development of the Electricity Market in Hong Kong
Stage II Consultation

I would like to express my views on the Stage II Consultation proposals.

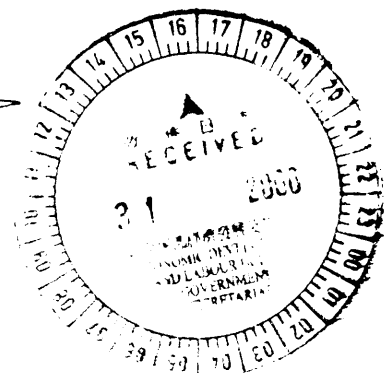

I have the views that the government should not reduce the permitted rate of return and shorten the period for regulatory agreement. I am satisfied with the existing scheme of control agreement and the current electricity supply reliability.

If the government does not provide adequate incentives to the power companies, they may restrict their investments in electricity infrastructure. The electricity supply reliability will then deteriorate and we have to face power outages that will seriously affect our daily life.

Yours faithfully,

Sien Mee Yuk

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

27/03/2006 09:21

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: 開放電力市場, 不一定是好的.

☐ Urgent ☐ Return Receipt

14/03/2006 20:53

敬啟者：

身為香港市民，對於「開放電力市場」的提議，有以下意見：

- 1) 如果真的「開放市場」，新加入的電力供應公司，絕大可能會自行鋪設電纜，到了這時候，無論是行人路，還是車路上將會有很多工程進行，結果會導致交通阻塞，噪音增加，塵土飛揚，受苦的還是市民自己。
- 2) 人人常常投訴電費貴，但試想想自己有否不必要的用電呢？如果在初夏時候，你會選擇開冷氣，抑或是風扇呢？如果是前者，那就不要再投訴要多交電費了，因為是自己不必要的用電。
- 3) 地產商為了自己利益而將樓價推高至不合理價錢，但人人還將自己畢生積蓄去炒賣樓宇，君不見會有議員在「立法會」提議地產商檢討利潤，降低樓價，又或者會有組織到地產商抗議樓價嗎？為什麼有人會可以接受不合理的樓價，但相對於少數目的電費就要怨聲載道？
- 4) 開放電力市場，未必一定是件好事。曾為兩電力公司的用家，我可以好客觀的說，兩家公司的供電服務一直都保持到良好而穩定的水準，絕少發生像早前加拿大及美國的大停電事故。所以如果有新加入的電力供應公司，雖然表面上用家可以有更多的選擇，但新加入的公司可以保證到它的服務水準會及得上中電和港燈嗎？一般市民可能以為電力公司市場競爭大，電費就會越平來吸引客戶選用，但有減必會加，我相信任何電力公司一定會因成本的增加而加電費的。正如我過去選擇「互聯網」的公司時，曾因為一個「收費便宜」的原因，而與一間x公司簽約，但該公司的服務實在太差劣，令我經常在晚上「繁忙時候」，連接不到「互聯網」，所以最後我還是選擇其他收費貴但服務水準良好的公司，所以「便宜」不一定是好的。我並不看好「開放電力市場會對用家得益」！

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Simon Aird

Subject: my comment on the electricity market
☐ Urgent ☐ Return Receipt

Dear Sir / Madam:

I would like to submit my views for Government's Consultation Paper for future electricity market in Hong Kong. Firstly, I agree that it is a proposal with good intention to address some deficiencies in the current scheme, for example, high permitted return, incentive for over investment and lack of competition. Also, I fully support to take environmental factors, renewables and energy efficiency into consideration.

However, on the other side, I also feel that there are some details of the proposal has not been well thought through. Firstly, the low permitted return for emission control facilities is not consistent with the high return on renewables - since both contribute to better environment, the returns should be the same. Indeed, another important way to contribute to better environment is energy conservation and I believe the government should also give incentives for the power companies to promote energy efficiency and conservation.

Another thing not clear is that how to open the market and lead to a more competitive market. Having lived in some deregulated markets such as New Zealand and Australia, I understand it is a long process and needs a lot of careful consideration, planning and pilot. I suggest to layout a clear plan of how to transition to an open market.

Lastly, a clear energy policy should be set up for the sake of longer term development in Hong Kong. I believe a balanced approach should be taken to draw a balance among supply reliability, electricity cost and environmental performance.

Subject: View on Stage 2 Consultant

☐ Urgent

☐ Return Receipt

28 March 2006

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings, Lower Albert Road,
Central, Hong Kong

Dear Mr. Stephen Ip,

Views on Stage 2 Consultation

Recently I have heard quite a lot of news about the Stage 2 Consultation from the internet, Chinese cable TV and some Chinese newspaper brought over here by my friends. Being an emigrant from Hong Kong with most of my life spent in Hong Kong until recent years, I would like to give you some of my views on your Consultation Paper and hope that you will not follow the deregulation path of Australia.

Nowadays, no one can dispute the importance of reliability of supply, in particular Hong Kong people as they all live and work in high-rise buildings. Having lived in Hong Kong for many years and Australia in the past 10 years, I can tell immediately how important reliability is for electricity supply. From the 70' s to 90' s, I witnessed the great improvement of reliability of supply in Hong Kong, and seldom suffered from power interruption before I left Hong Kong to settle in Australia. Here in Australia, just for a few years' life here, I have experienced several power interruptions. Fortunately we live in houses here not requiring escalators to take us home and water pumps to give us water supply. Hence, my first view on your Consultation Paper is that I agree with you that the future regulatory system for Hong Kong should be able to meet the policy objective of reliable supply.

However, I have some doubt on how you can keep the two power companies continue to invest with the much reduced rate of return. Electricity infrastructure requires continuous investment and upgrade on it to keep it secure and reliable. The current deregulated environment here in Australia cannot provide such an incentive and hence we consumers suffer. Hence my view is that you should be careful with the setting of the rate of return.

My last view on your Consultation Paper is about your suggestion of introducing new supply sources after the next regime, and your recent statements on opening the Hong Kong market made to the public. I do not think it is wise to do so, given the world financial centre status of Hong Kong and the high reliance of electricity by Hong Kong people. I am quite sure that if you follow the deregulation path of Australia, electricity

price will go up and reliability of supply will go down. The situation will be even worse for Hong Kong as Hong Kong has no choice but to mingle with the Mainland market when deregulation comes. I sincerely hope that you will not do that for the well-being of Hong Kong.

Yours sincerely,

Simon Chan

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

The pollution situation in Hong Kong is a disgrace to Government and the people of Hong Kong. This issue needs to be tackled now with brave action rather than the constant stalling that we have seen for the last 15 years.

One piece of action that has not yet taken place is control of the electricity generation market. The government must enhance control in this market, so as to restrict the various sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. I support RE, AND ALSO incineration where the appropriate technology is used - the Government's fear of even the word incineration defies logic and science;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of the electricity market in terms of economic, social, environmental and regional development;
6. The speed of enhancement of cooperation in RE development between Guangdong and Hong Kong should be increased, including the regional blueprint of wind energy development.

@Asia's World City@ is becoming something of a joke - please act now before it is too late to bring back the blue sky.

Subject: HK electricity comment

☐ Urgent

☐ Return Receipt

I agree that the two electricity companies return profit about 13.5%, but can reduce the rate if air pollution beyond the environment exhaust volume.

In order to maintain high reliability electricity supply, new electricity company MUST promise 99.99% power stability. If not, the new company should get a penalty from Government and resign from the HK market.

Open the electricity market, the power source of new electricity company should be provided by at least 50% renewable energy. it is because cost (include capital and manpower) of HK electricity companies are higher than Mainland.

Also, 12-15 years consignment is acceptable for electricity company long-term plan and development.

Furthermore, my family's electricity fee is more cheaper than Town Gas and it is monopoly in HK. Why nobody request it reduce the price?

Thanks!

葉澍堃先生:

香港未來電力市場第二階段諮詢意見書

鑑於貴局的第二階段諮詢文件中的部份建議，對一般市民影響不輕，本人欲按其中一二，發表意見，望貴局加以採納。

在經濟規管方面，文件建議調低准許回報率至 7-11%，並將規管協議年期由目前的 15 年縮短至 10 年，此種種安排俱有極大影響性，會減低投資者的投資意欲。須知電力基建投資額大而且回本期長，容許有效反映成本的電價及足夠長的協議年期，才能確保投資繼續，維持有效電力供應。其實，在現時的規管協議下，13.5%的准許回報率証明可以吸引足夠投資，政府亦對電力公司有着相當嚴格的監管，所以政府應考慮維持現時之監管模式。

還有，可再生能源的應用暫時乃未成熟，故此政府應以大局為重，與兩電維持現時的監管形式，創造政府、電力公司與市民的三贏局面。

Economic Development & Labour Bureau
2/F., Central Government Offices, Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Mr. Secretary,

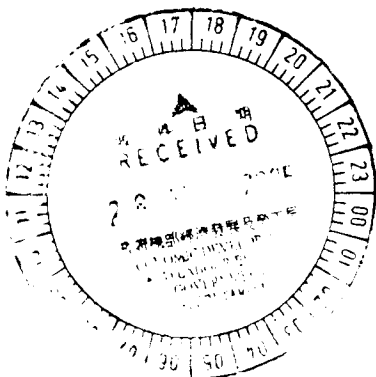

Stage II Consultation on Electricity Market Development

Some scholars commented that the reduction in return rate to power companies can bring in little saving in electricity bill. If that is the case, why should we be bothered with all the changes? Why do we simply leave it as is and focus our energy on something more meaningful, e.g. better governance over the operation of Disney Land which is a disgrace to Hong Kong.

Yours truly,

Simon Hung

經濟發展及勞工局長：

吾居新界十多年，自加拿大回來，感中電服務和電力質素可比或更好於美加大城市。

引伸對香港政府有良好評語，近聞電力諮詢文件，當中引入新公司新條文，吾深感憂心。概知外國引入新公司時只令市場動盪，失業或民心不穩，香港自回歸之後，市民共渡金融風暴或 SARS，現今方興，切記莫在此時改制。

如政府引入新公司，其蓋沒圍在那裏？要知新制度或條文需時配合。政府又可担当保證，其電力質素和服務如一般好，費用一定低。官請看泥灯年年加費，為環保又加費，添增市民負擔。

如果政策能為市民生活好的，亦不應只是伴賠命而已，或知千年樹木百年樹人，或對中電甚好，不願簡化。

請局長各員留意

Subject: Government's stage II consultation paper on the future development of electricity market

☐ Urgent ☐ Return Receipt

Dear sir,

My comments on the captioned subject are as follows.

Reliable & safe electricity supplies have been built in stable & safe environment

Unlike the telecom industry which is volatile and fast changing, electricity technology has little change during the past decades and the development of electricity market requires stable environment. Every Hong Kong citizen agrees that the existing reliable & safe supplies of electricity are extremely important. These have been built on the strong foundation under long term planning and investment in HK.

However, the consultation paper suggested to significantly trim down the return and at the same time substantially increase the risk exposure of power companies in the future electricity market (*e.g. by reducing the duration of regime and introducing competition without clear plan in place*). **I do not agree with this drastic move.** From the shareholders point of view, they will be discouraged to invest in this industry. Eventually the long term stability of HK electricity market will be jeopardized. While many parties (mostly political) have raised their concerns from the consumer's point of view, I would strongly recommend the government to also consider the investor's point of view seriously. Rational decision must be made to avoid an unstable or unsafe environment in future electricity market.

Thanks & Regards,

Simon Lam Ho Man

Subject: 網上行動回應《香港電力市場未來的發展》
☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 - 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

26 March 2006

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road, Central,
Hong Kong.

Dear Mr. Ip,

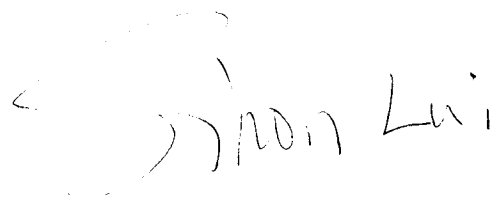

Stage II Consultation on the Future Development of the Electricity Market

I understand that you are seeking views from the public on the future development of the electricity market in Hong Kong. I would like to make my comments as follows:

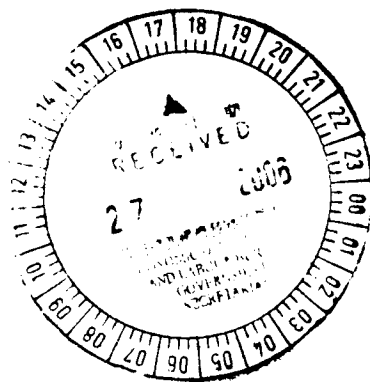

The government has proposed to shorten the period for the agreements between the government and the power companies to 10 years and reduce the power companies' rate of return to 7-11% after 2008. These proposals would increase the power companies' risks in their future investments and they might decrease their investments in their facilities in the future. Without proper investments in the power supply facilities by the power companies, the reliability of power supply in Hong Kong will decrease and Hong Kong's image as a metropolitan city will be affected. In order to maintain the reliability of power supply in Hong Kong after 2008, the existing regulatory framework for the electricity market should be continued.

Please consider my comments above in your plan for the future electricity market in Hong Kong. Thank you.

Yours faithfully,

Simon Lui

29/03/2006 20:46

To Economic Development and Labour Bureau,

You will doubtless have noted that at the recent National People's Congress, Premier Wen Jiabao again emphasised the new national policy of protecting the environment, and de-emphasising growth for growth's sake.

While the SAR is guided by the one country-two systems principle, we would very much hope that Hong Kong will also seek to adhere to such fine national goals. After all, we are always quick to jump to whatever the Mainland requests in normal circumstances.

As Hong Kong citizens, we are very much concerned about the air pollution caused by the power stations. We strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;

Subject: Stage II Electricity Sector Consultation Paper

☐ Urgent ☐ Return Receipt

Capitalist Solutions

1903 Cameron Commercial Centre
458-468 Hennessey Road, Causeway Bay, Hong Kong

Comments on the “Consultation Paper on Future Development of The Electricity Market in Hong Kong -- Stage II Consultation”

by Simon Patkin, Director, Capitalist Solutions

This is a commentary on the consultation paper entitled “Consultation Paper on Future Development of The Electricity Market in Hong Kong -- Stage II Consultation”.

Before discussing the government's proposals for the electricity market, I would like to set the context, specifically the role of government in relation to the free market. I would also like to add that the government's proposals are anti-reason and anti-freedom.

Through its establishment, a government in a free society is given a monopoly on the use of force. The government's job then is to protect citizens from the initiation of force by others and in doing so protect each individual's right to their own life. In this way, the government protects this right to life and the right of an individual to think and act on his thoughts -- remembering that no person's actions should include initiating force or threatening the initiation of force against another. In this sense the government's only legitimate use of force is as a retaliatory measure against those who have chosen to abandon reason in favour of force. To put it another way, the government's proper function is to use force only when force has been initiated or threatened to be initiated against another individual or party.

In this context, any initiation of force by the government in the electricity sector, or the threat of such force goes against reason and the use of the mind by the individual. Indeed, the mind stops where the gun starts and the individual has to suspend his own judgment in these cases. The individual is stopped from thinking for himself and for deciding for himself. To the extent that force is threatened against him he becomes a slave to that force wielder. This principle is not isolated to the electricity sector but can be applied in any situation where the government initiates force -- including when it stops new entrants into any market or sets up mechanisms where the individual's right to choose for themselves is replaced by a scheme which imposes upon the individual only one choice of supplier.

Within the electricity sector, the government has said that other entrants are free to enter the market, but this does not seem to be true and the policy itself is very confusing. Indeed when Vertex Communication and Technology Group attempted to enter the market, the government used the threat of force to delay that company's plans to set up a power grid. Vertex was told to ask permission first and in this sense the government effectively pointed a gun at Vertex delaying their

entry into the market. Further the Mass Transit Railway (MTR) too could probably generate its own power, but it cannot because the government has immorally used the implicit threat of force to stop the MTR from doing so. Executives for the MTR cannot pursue a course they think best for their shareholders because the government has used the threat of force to stop them. They cannot even think about the idea, because they cannot put this idea into action.

Taking the argument one step further, the government has replaced major parts of the free market in Hong Kong with an aristocracy of pull, where companies can lobby for special protection on the flimsiest of excuses. Companies are not rewarded for productivity, but rather for influence, need or position. We saw this when only one contractor was asked to bid on Cyberport. We saw it in the property market where land sales stopped because the developers wanted them to stop, and we see it in the airline market, where foreign airlines are prohibited from picking up passengers on certain routes, possibly adding thousands of dollars to the price of a ticket. No wonder there are so many accusations of collusion between government and certain business groups.

With regards to the current consultation, there has been intense lobbying by the electricity sector to keep the current scheme. This scheme can only be kept if the government continues to violate the rights of every other person in Hong Kong. (It should be noted that such lobbying seems strange, given that the current companies have operated for 40 years and should be in a very strong position to compete. One wonders whether they are efficient and why they appear so afraid of any competition.)

The conclusion is that the current proposals allow the government to continue its abuse of power by taking away choice from new producers and existing customers. The government should end the scheme of control and recognize that people have the right to set up second, third and fourth grids (and more) without asking permission. It will also give consumers more choice and possible reductions in prices. At the same time, the government should go beyond the electricity sector and end all practices that use the threat of force to reduce supply. This includes the telecommunications sector, the airline sector and the radio and television sector.

By doing so, the government will show respect for the right of the individual. It will show that instead of threatening force against the individual, it is the agent that truly protects the individual so he may be free to think and act upon his thoughts.

For a fuller discussion on these ideas, I refer the reader to *The Virtue of Selfishness* and *Capitalism: The Unknown Ideal*. Both books are written by Ayn Rand and *Capitalism: The Unknown Ideal* includes three articles by Alan Greenspan, the former Chairman of the Federal Reserve in America.

Comments on the “ Consultation Paper on Future Development of The Electricity Market in Hong Kong -- Stage II Consultation ”

by Simon Patkin, Director, Capitalist Solutions

This is a commentary on the consultation paper entitled “ Consultation Paper on Future Development of The Electricity Market in Hong Kong -- Stage II Consultation ” .

Before discussing the government's proposals for the electricity market, I would like to set the context, specifically the role of government in relation to the free market. I would also like to add that the government ' s proposals are anti-reason and anti-freedom.

Through its establishment, a government in a free society is given a monopoly on the use of force. The government ' s job then is to protect citizens from the initiation of force by others and in doing so protect each individual's right to their own life. In this way, the government protects this right to life and the right of an individual to think and act on his thoughts -- remembering that no person's actions should include initiating force or threatening the initiation of force against another. In this sense the government's only legitimate use of force is as a retaliatory measure against those who have chosen to abandon reason in favour of force. To put it another way, the government's proper function is to use force only when force has been initiated or threatened to be initiated against another individual or party.

In this context, any initiation of force by the government in the electricity sector, or the threat of such force goes against reason and the use of the mind by the individual. Indeed, the mind stops where the gun starts and the individual has to suspend his own judgment in these cases. The individual is stopped from thinking for himself and for deciding for himself. To the extent that force is threatened against him he becomes a slave to that force wielder. This principle is not isolated to the to the electricity sector but can be applied in any situation where the government initiates force -- including when it stops new entrants into any market or sets up mechanisms where the individual's right to choose for themselves is replaced by a scheme which imposes upon the individual only one choice of supplier.

Within the electricity sector, the government has said that other entrants are free to enter the market, but this does not seem to be true and the policy itself is very confusing. Indeed when Vertex Communication and Technology Group attempted to enter the market, the government used the threat of force to delay that company's plans to set up a power grid. Vertex was told to ask permission first and in this sense the government effectively pointed a gun at Vertex delaying their entry into the market. Further the Mass Transit Railway (MTR) too could probably generate its own power, but it cannot because the government has immorally used the implicit threat of force to stop the MTR from doing so. Executives for the MTR cannot pursue a course they think best for their shareholders because the government has used the threat of force to stop them. They

cannot even think about the idea, because they cannot put this idea into action.

Taking the argument one step further, the government has replaced major parts of the free market in Hong Kong with an aristocracy of pull, where companies can lobby for special protection on the flimsiest of excuses. Companies are not rewarded for productivity, but rather for influence, need or position. We saw this when only one contractor was asked to bid on Cyberport. We saw it in the property market where land sales stopped because the developers wanted them to stop, and we see it in the airline market, where foreign airlines are prohibited from picking up passengers on certain routes, possibly adding thousands of dollars to the price of a ticket. No wonder there are so many accusations of collusion between government and certain business groups.

With regards to the current consultation, there has been intense lobbying by the electricity sector to keep the current scheme. This scheme can only be kept if the government continues to violate the rights of every other person in Hong Kong. (It should be noted that such lobbying seems strange, given that the current companies have operated for 40 years and should be in a very strong position to compete. One wonders whether they are efficient and why they appear so afraid of any competition.)

The conclusion is that the current proposals allow the government to continue its abuse of power by taking away choice from new producers and existing customers. The government should end the scheme of control and recognize that people have the right to set up second, third and fourth grids (and more) without asking permission. It will also give consumers more choice and possible reductions in prices. At the same time, the government should go beyond the electricity sector and end all practices that use the threat of force to reduce supply. This includes the telecommunications sector, the airline sector and the radio and television sector.

By doing so, the government will show respect for the right of the individual. It will show that instead of threatening force against the individual, it is the agent that truly protects the individual so he may be free to think and act upon his thoughts.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

31/03/2006 09:54

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Clean Air Now

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. Demand management must be built into the profits of the company. There must be a mechanism where they profit if they can significantly reduce energy demand. At present they only profit from increased demand.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

25 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Sir,

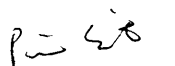

Future Development of the Electricity Market in Hong Kong
Stage II Consultation

I would like to express my views on the Stage II Consultation proposals.

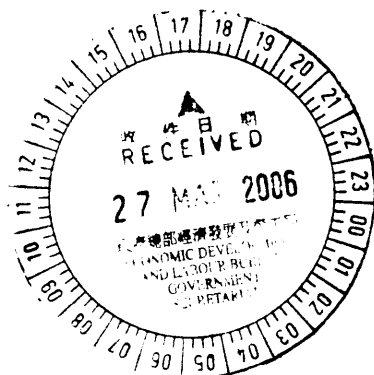

I think that with the proposed reduced permitted rate of return and shortened regulatory period, the power companies will reduce their long-term capital in the electricity infrastructure.

Hong Kong as one of the major financial centres in the world, electricity infrastructure is vitally important. Without adequate investment in electricity infrastructure, the existing high reliability of electricity supply will decline, and both our daily life and economy will be seriously affected.

Yours faithfully,

Sit Kwong Ming

☐ Urgent ☐ Return Receipt

Dear Sir,

I am just an ordinary citizen and would like to say something about my concern on electricity supply.

Now that different strata from the society pleading for their benefits out of the upcoming changes of the electricity market : general citizens / legislators want the power companies to lower the tariff; commercial / industrial sectors want the power companies to sustain reliable electricity supply (with lower tariff); environmental protectionists want the power companies to ensure low impurity emission; the power companies want to acquire stable profit. The expectations of the public and the power companies contradict.

In fact, I do not believe public consultation works as everyone would demand the power companies to give up their rich profit, and keep or even improve the standard of service. It doesn't make sense. I think the government must have got a plan in mind. On making any decision, I just hope the government would view the matter from all concerned parties, not just on the response of general consumers.

Dear Sir,

Future Development of the Electricity Market in Hong Kong
Stage II Consultation

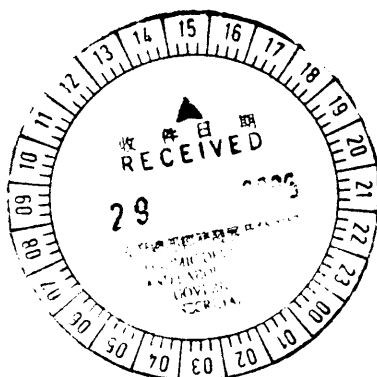

I would like to have the following comments on the Stage II Consultation proposals.

I have the views that the proposed 10-year regulatory period is too short and the proposed 7%-11% rates of return are too low. I am afraid that the tightened regulatory requirements will cause power companies reducing investment in their power systems. Since huge and long-term investment is required for electricity infrastructure, the existing electricity supply reliability will inevitably deteriorate if the necessary investment is not available.

Yours faithfully,

Siu Ming Fai, Raymond

至經濟發展及勞工局局長，

本人對於准許回報與排放量上限目標掛鉤有以下意見，香港已有空氣污染管條例，如電力公司超越排放量已經要接受處罰。但諮詢文件上又加上排放量與回報率掛鉤，是否雙重處罰？像錯一次但罰二次。准許回報應與集資成本掛鉤方為恰當，也平衡投資者的利益。

謝謝

SK Au

Dear Sirs,

Stage II Consultation - Future Development in the
Electricity Market in Hong Kong

May I express my views on the stage II consultation on the Future Development in the Electricity Market in Hong Kong.

I cannot agree with the suggestion of reducing the rate of return. I believe that this move will discourage investors and jeopardize the future development of the electricity market in Hong Kong.

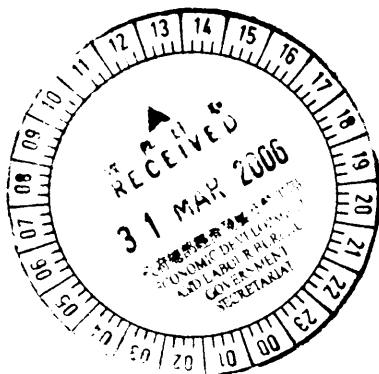

Lowering of the rate of return to 7 - 11% as proposed in the Stage II consultation paper is hardly acceptable. In the absence of sufficient incentive to invest, I believe everyone in Hong Kong will eventually suffer from the consequence of decrease in power supply reliability. The experiences of other countries have shown to us that under-investment leads to deficiencies in infrastructure and power blackouts. This in turn poses a huge cost to society and the economy.

The power companies in Hong Kong have been very cooperative with the Government and had contributed quite a lot in supporting Hong Kong's economic growth. I sincerely hope that this situation will continue. The prevailing principle must therefore be to continue to balance the interests of customers and shareholders while ensuring an adequate and reliable supply of electricity.

Yours sincerely,

SK Fung

Subject: Comment of Electricity Market development
☐ Urgent ☐ Return Receipt

To Whom It May Concern,

**Comments regarding the consultation for the Future Development
of the Electricity Market in Hong Kong**

As a general citizen of Hong Kong, I seldom express my view regarding any consultation issue of government. However, as an engineer in this field, I felt that I have voice out this time.

As an international financial city, reliable electricity supply is very important to any metropolitan city like Hong Kong. Anyone who travelled/worked around the world will certainly agree that the electricity in Hong Kong is very reliable. The power shortage situation in China is very obvious, and the overseas experience show that lack of sufficient investment in power industry, which results in deterioration of supply reliability, is not uncommon in opening the electricity market, eg, the massive blackout at U.S.A/Canada in 2003. Hence, it is not recommended to perform/introduce big changes into the electricity market in HK. In order to benefit all the HK citizen, the profit/return of the power company should linked up with their reliability rating and their service level.

Please note that reliability rating not only relate on stable generation plants but also, the power transmission and distribution equipment. All Economists knew that large enterprise like to invest on generation plants and it can generate money as well. How about the transmission & distribution equipment investment? They are costly, required a lot of maintenance, constantly review & carried out reinforcement but they are actually the key element for delivery of electricity supply to the Public. Unless the new proposal can ensure that power company maintain sufficient investment in this area too, any reform will be meaningless.

Moreover, environmental protection is very important and renewable energy should be the future direction of the world. However, I understand that the investment in this area is also expensive and its development might not be able to lead to a low electricity cost in the nearest future. However, for the better future of our children, we would not mind to provide incentive to the power company to develop in such direction. Of course, everyone will happy if the electricity rate can come down a little bit, but if it is at the expense of our environment and the supply reliability of our home, it is definitely a price that we don't want to pay.

Yours faithfully,

SK Ho

Subject: Electricity Market Stage 2 consultation
☐ Urgent ☐ Return Receipt

Dear Sir,

In Hong Kong such a crowd city, I do not expect we will suffer any electricity loss, therefore a 100% secure electricity supply is required.

A balance of electricity traffic and clean air shall be maintained, Government should have an incentive scheme to attract the Power Company to invest and build modern equipment to improve the air quality immediately.

Cheap, stable and save electricity is a successful factor of HK

Subject: Future Development of the Electricity Market in Hong Kong Stage II
Consultation

☐ Urgent ☐ Return Receipt

28 March 2006

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings, Lower Albert Road,
Central, Hong Kong

Dear Mr. Ip,

Stage 2 Consultation on
Future Development of
The Electricity Market in Hong Kong

Although I have left Hong Kong to Australia for some years, I still care about the place where I was brought up, educated, worked, and lived for some 20 years. With so much media coverage on the future regulation of power industry in Hong Kong, the issue arouses my interest. After going through your consultation paper and the newspapers reporting your views, the power companies' views, and the public's views, I would like to give my comments based on my knowledge of both the Hong Kong system and the Australian system.

I agree with your policy objective – reliable, safe and efficient energy supplies. I do not see such an objective explicitly stated here in Australia. I believe Hong Kong people need such a policy objective much more than Australians because of Hong Kong's living and working environments being basically in high-rise buildings. The inconveniences that would be caused by power interruptions would be much greater in Hong Kong than in Australia where most people live in houses or low-rise buildings. Nevertheless, the damages and financial losses that will cause the central business districts would be similarly severe for both places and hence reliability of supply is therefore always important for the economic development of any countries.

A reliable electricity supply system will require continuous investment on the infrastructure and its upkeep. It is therefore very important to provide a stable regulatory framework for investors to invest in the infrastructure adequately and timely. From the high reliability and good customer services the two Hong Kong power companies are providing to Hong Kong people now, I can see that the current Scheme of Control is providing a stable environment to investors. Looking back at the performance of utilities here, I would say that the current Australian system fails to provide that. Hence, my first question on the Consultation Paper is, "can the post-2008 regulatory system do the same as Scheme of Control in future?" Judging from the following proposals in the paper, I have doubts:

- (1) 10-year regulatory period which is too short;
- (2) 7 – 11% rate of return which is too low;
- (3) new power supply sources from the Mainland after the next regime putting new investments at risk.

The above three proposals will make power companies reluctant to invest when they see the uncertainty and risks in the future. This will have a grave impact on reliability. It should be noted that here in Australia we will soon face the problem of power shortage because the current system also does not give any incentive or certainty for new investments. We are now operating under very thin reserve margin because of the lack of investment in electricity.

Yours sincerely,

SKG Wong.

Dear Sir,

HK has one of the best Electricity supply net work in the world in terms of reliability, cost and efficiency. Any new network must have a proven track record of comparable reliability and sustainability to be acceptable for HK. For reduced pollution we must be prepared to pay for the additional cost and save somewhere else in our budget.

近年來,社會經濟復甦,香港作為亞洲金融中心及經濟樞紐,各行各業之發展,實有賴於一個穩定的電力供應系統,以香港電燈為例,供電穩定率達百分之九十九點九九九以上.其服務之佳有目共睹,亦值得港人驕傲.誠然,正所謂一分錢一分貨,沒有合理利潤,商人們哪肯投下鉅資維持如此令人口碑載道的優質服務嗎?請謹記發電項目乃非一般投資可比,其資本額之大,回本時間及方式又受到與政府簽定之條約所限.本人亦詳細閱讀過供電條款上的投資回報方式,如政府在2008年單方面更改供電續約模式,隨時會令商人的鉅額投資有所損失,失去投資興趣,良好發展計劃無以為繼,服務痠縮倒退.所以懇請政府應作出慎重考慮,與電力公司就更新供電條約時,維持不變之利潤上限13.5%至15%,讓我們市民繼續享受優質供電下,各行業能保持在市場上的競爭優勢,業務蓬勃發展,更進一步改善各項優質生活和各式各樣的休閒娛樂.讓市民共享安居樂業之福.

Lower Albert Road, Central
Hong Kong

Dear Sir,

Views on Electricity Market Future Development
- Stage II Consultation

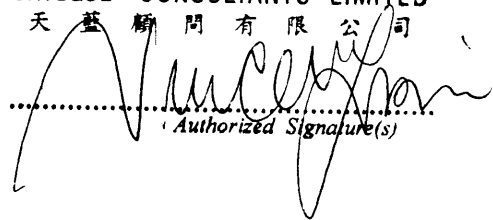

We are a human resources consulting and software development firm established in 1991 and currently specialize in providing a total solution to personnel, payroll and attendance systems. As reliable and adequate electricity supply is of paramount importance to our business, we would like to express our views on the Stage II Consultation Paper on the Future Development of Electricity Market Development in Hong Kong.

We have already learned the deleterious consequences of massive blackouts in North America in 2003 and do not want any system blackout to occur in Hong Kong. For a successful business running, we must have a high level of reliability and adequacy of electricity supply in Hong Kong. In Hong Kong, we have seldom experienced any power interruptions. We are satisfied with the current level of supply reliability and services. Therefore, we totally support the Government's proposed policy objectives to maintain the high level of reliability of our electricity supply in the post -2008 period.

However, the Stage II Consultation Paper has proposed a shorter 10-year regulatory period and a reduced permitted rates of return. We are afraid that these proposals may discourage the power companies to invest in the electricity supply infrastructure. Eventually, we would suffer from power interruption and power shortage in the post-2008 period due to insufficient investment in the electricity infrastructure. Electricity supply has always been very reliable in Hong Kong and we do not mind to pay more for a high level of reliability and adequacy of electricity supply. Therefore, Government should give sufficient incentives to investors in order to ensure a reliable and adequate electricity supply.

We request the Government should be more careful in evaluating the proposals in the consultation paper, and our views can be considered and reflected in the Stage II Consultation.

Yours faithfully,
For and on behalf of

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

To the Economic Development and Labour Bureau,

As a Hong Kong resident, I am very much concerned about the air pollution caused by the power stations.

For the HK residents and your own future generations, the least the SAR Government can do is its part to clear out the pollution problem which is getting worse. Children should not be allowed to grow up in an environment like this, that is debilitating to the immune system, and disease-causing.

There are many policies that the Government can undertake, including enhanced control in the electricity market, and better enforcement of your policies on vehicle emissions (just look at the so-called green buses that continue to emit black smoke in Central).

Please be a responsible parent and do your part for your children.

So Chong Yuen

Dear Mr Ip,

Re: Stage II Consultation on Electricity Market

I am a structural engineer who have participated in many government-related construction projects like Tai Tam Tunnel project.

Upto my understanding, Tai Tam Tunnel operator had been granted a 30-year franchise which guarantees a minimum return collected from the tunnel toll. I think this regulatory mechanism is quite similar to that currently governs the electricity industry, which is a reasonable framework for large infrastructure involving huge amount of investment.

Looking at the electricity industry, the power companies do not have any franchises as pointed out by you in the media recently. That means, unlike the tunnel operators, the power companies may face possible competition from others. In other words, their businesses are more risky compared with tunnel operation.

As such, the proposals of having the present return level lowered sharply and the contract period shortened by 1/3 worry me very much. The proposal seems further increase the risks to power companies and at the same time lower their

return level. I wonder who will invest money in this industry with low return and more risks. If I were the power company owner, I would rather invest in tunnels.

To conclude, I consider the above proposal in the consultation paper is unreasonable and will obviously discourage investment in electricity industry. I seriously demand the government NOT to adopt such harmful proposal.

Best regards,

So Dong Yuen.

March 17, 2006
Economic Development and Labour Bureau
2/F, Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Mr. S.K.Ip,

Re : Responses to Stage II Consultation Paper

Please note my comments below summarizing what I want as an SME in Hong Kong.

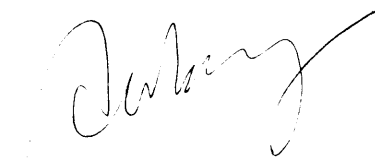

Existing Reliability Level Should be Kept At All Cost

Everyone in Hong Kong will comprehend the importance of supply reliability. To sustain daily business, we cannot afford a minute loss of power supply. I appreciate the current level of supply reliability provided by the two power companies. Their investment in power infrastructure should be maintained. And their entitlement for earning a return based on their investment risks should also be respected. The consultation paper does not provide a sufficient rationale to justify the proposed lowering of return rate from 13.5% to 7-11%. Without a clear picture for the post-2008 regime, the risks for investors will be so increased that the investment in power industry will be discouraged finally. There is no winner for the game if this proposal in the consultation paper is adopted. All electricity users will lose the game as the reliability level that we are enjoying degrades in the long run. Hence, I like to urge the Government to reject the proposal totally.

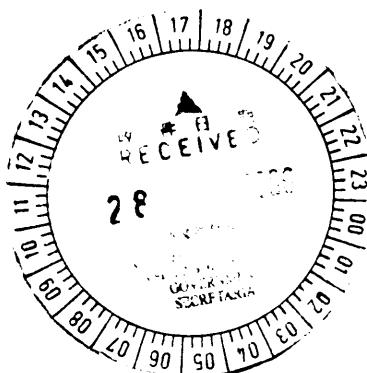

No Benefit For SMEs Even If Electricity Market Is Deregulated

The Government seems very keen on opening the local electricity market for introducing competition. It is obviously based on the assumption that surplus supply will be available from the Mainland in mid-term. Even if it is possible, would this power import be cost-effective to Hong Kong? Of course not. It is because, on the one hand, the tariff of the imported power will not be much lower due to the long distance of power transfer. On the other hand, reliability level will be inevitably lowered as we are relying on non-local supply sources. As an SME, I cannot afford any extra space and money to equip backup power supplies to cater for frequent power interruptions. The loser in this deregulation would be us - SME. No market deregulation, hence, is recommended.

Yours sincerely,

So Corp. Ltd.

29 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Mr Yip,

Future Development of the Electricity Market in Hong Kong
Stage II Consultation

With reference to the Consultation Paper, I would like to express my views for your consideration.

I fully support the Government's attempt of improving the air quality in Hong Kong. In the power industry, the two best ways for improving air condition are the building of RE infrastructure and the installation of emission reduction facilities.

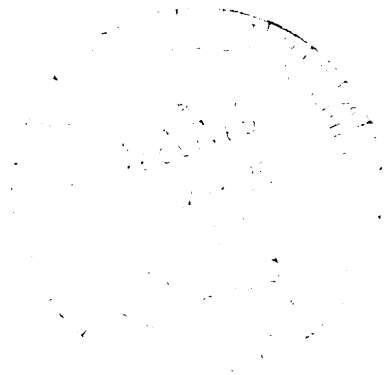

Since topographical constraints and limitations exist in Hong Kong for the application of RE, the installation of emission reduction facilities is the only feasible solution in Hong Kong for better the air quality. Therefore, the permitted rate of return for the emission reduction facilities should be set at a higher level to attract the investment from the power companies.

Thanks for your attention.

Yours faithfully,

So Kenneth

Subject: Re: Future Development of the Electricity Market in Hong Kong –
Stage II Public Consultation 香港電力市場未來的發展 – 第二階段公
眾諮詢

☐ Urgent ☐ Return Receipt

Dear Sir,

Please note my views as follows:

Relationship with the Power Companies

1. This evening (30 March) I saw the Secretary for Economic Development and Labour appearing on TV saying that a tense relationship with the power companies is not only not a problem, but is even necessary. I totally disagree with this saying. The power companies have been providing a power supply with reliability of over 99.999% at an affordable tariff which has been kept below some 2% of my household expenditure. One of the biggest problem of this consultation process is that it has unfolded towards a direction of hostility between the power companies and the Government, intentionally or otherwise, which is totally unnecessary. I think it is important for the Government and the power companies to revert back to a cooperative track. The Stage II Consultation Paper gives me an impression that the Government is trying to change the conditions forcefully with a heavy hand. The power companies operate according to the principles of economics. If they find their funds can be invested in other ways with much better return, I can imagine their withdrawal is not surprising. To me the worst scenario is some new players with no tracked record taking up the stage without deep thoughts.

Permitted Rate of Return

2. Although not stated in the Stage II Consultation Paper, the Government now makes it clear that they wish to reduce the rates of return for RE, generation, T&D and emission reduction equipment to 11%, 10%, 9% and 7%. It seems that there are too many ways to earn much higher returns than 7% to 11%. I just don't want to see the existing power companies being forced out of business by this significant reduction in rates of return.

3. Why does the Government wish to differentiate the permitted rate of return between different types of equipment? The higher return for RE seems to be more understandable, as the Government wishes to reward the development of RE. However why does the Government wish to reduce the return for T&D and emission reduction equipment? To me this is irrational as Generation and T&D equipment are equally important for providing reliable power supply.

4. The particularly low return for emission reduction equipment is contradictory to the target of reducing emissions. Why was an objective "to avoid the costs of emission reduction facilities being passed onto consumers as far as possible" set? This opposes the principle of "the users have to pay".

5. Sometimes it may not be easy to differentiate generation equipment and emission reduction equipment and I can see that the difference in permitted rate of return would sow the seeds for future disputes.

Linking the Profit with Emissions

6. The emission caps stipulated in the SPLs are mandatory that the power companies must comply. The SPLs must already have clauses to deal with emissions exceeding caps. To further penalize the power companies by reducing the profit due to emissions is double penalty. Why don't leave the environmental issues to the SPLs?

7. Proposal to reduce the profit due to emissions exceeding caps is understandable, although not reasonable. However the proposal to provide "bonus" return to encourage the power companies to reduce their emissions is difficult to implement. Does it mean that the power companies can increase the tariff under this circumstance?

Renewable Energy

8. We all love RE. The fact why RE is not popular and is not able to significantly replace power generated from burning of fossil fuels is because of the high costs involved. Meeting the 1% to 2% RE target should not be shouldered by the power companies. On the other hand, making profit is not the priority of the operations of the Government who should take up a more important role in installing / operating RE generators, such as by harnessing the gases collected in landfills and waste water treatment plants.

These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

26 March 2006

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road, Central,
Hong Kong.

Dear Mr. Ip,

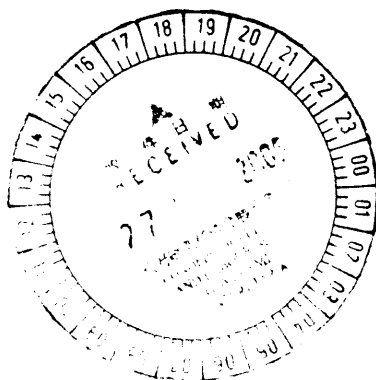

Stage II Consultation of the Future Electricity Market in Hong Kong

In response to the government's consultation on Hong Kong's electricity market after 2008, please find my views as follows:

Regulations for the future electricity market should ensure that the highly reliable power supply we are enjoying today will be continued in the future. Any proposals that would decrease the power supply reliability should be avoided. I understand that the government proposes to shorten the period for the agreements signed with the power companies for the next regulatory period and also proposes to reduce the power companies' permitted return after 2008. These proposals will vastly decrease the power companies' incentives in investing in the industry and will decrease the reliability of power supply in Hong Kong. To maintain today's power supply reliability in the future, the government should not consider these proposals at all.

I hope you will consider my views above in your planning for the regulatory framework for the future electricity market.

Yours faithfully,

So Wing Sing

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

So Yuk Yan

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Air Pollution Caused by the Power Station
☐ Urgent ☐ Return Receipt

I am writing to you to please consider my request for a cleaner air. Please see attached letter.

Sonjia

letter to the economic development sonjia.doc.pdf

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Sonny

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air. As for now, we are planning to relocate elsewhere despite enjoying everything else that HK offers. However the risk of damaging the health of our two young children forces us to move to a place where our children will not regularly contract respiratory illnesses which in turn will lower their immune systems to the extent of possibly shortening their natural lives.

Subject: Comment to stage 2 consultation

☐ Urgent ☐ Return Receipt

I write to express my opinion on the future development of the Electricity Market.

First of all, I agree that a safe, reliable and efficient supply of electricity at a reasonable price is to everybody's interest in Hong Kong.

However, there are several concerns I would like to highlight:

1. I like clean air and blue sky, but I also know it comes at a price. So far I see no clear incentive, or to the contrary, I see clear disincentives to environmental improvement investments.
2. If power companies' future return is to be linked to emission target, the target will have to be agreed between the government and the power companies. The process has to be transparent and reasonable.
3. Emissions targets are also closely related to the fuel mix, but there has been no sufficient debate on what's the ideal fuel mix for HK. Do we want more natural gas which comes at a higher cost? Neither have I seen any clear direction from the government so far.
4. What's the process of migrating to open market going to be like? I don't want to see the chaos or disasters that happened in overseas market as a result of poor planning. At the moment, the power companies in HK have the obligation to provide electricity to every customer who demands so. It is not fair then to allow any new comer to cherry pick customers. Plans to migrate to a competitive market must be clear before encouraging new entrance.
5. With a reduced duration of the regime and lack of clean incentive for environmental investment, how is the government going to ensure sufficient investment from the power companies given the long-term nature of the power industry? The fact that the government proposes to the permitted return further complicates the issue. The power companies have no obligation to enter into a new contract with the government. What is the plan to avoid the current reliable electricity in HK being jeopardized?

☐ Urgent ☐ Return Receipt

22/03/2006 09:13

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；

2. 可再生能源的投資可享有較高的准許回報率；

3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；

4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；

6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。
懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

本人認為應該控制私家車的流量，例如強制某種車輛（如私家車）每月可走的公里，用入油次數控制。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 第二階段電力諮詢文件意見

☐ Urgent ☐ Return Receipt

致葉局長:

本人對第二階段電力諮詢文件有以下意見

1. 本人深信穩定、可靠、合理電價之電力供應是非常重要的。諮詢文件沒有詳細規劃引入競爭之市場競爭環境。我很擔心政府為了引入競爭，而忽略了供電可靠性。
2. 本人期待政府對檢討新電力市場供應，不可以只照顧大客戶，而忽略一般小市民。
3. 本人深信每一項公眾服務不是免費，像政府推廣之排污費計劃 (用-自負)。政府一方面建議收緊排-標準，另一方面減低投資於減排污設備之回報率。這等於民間所說: 又要馬兒肥，又要馬兵不吃草。我對現時之電價感覺是合理。
4. 本人反對不同投資、有不同回報率。這會引導投資-投放資金於高回報設備而最終影響供電可靠性。

謝謝

Subject: Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

In my opinion, only 7-11% rate of return can not reflect the risk and investment of electricity industry. Sufficient and attractive return rate for long-term and huge investment in electricity industry shall be required to ensure the power supply reliability. Electricity generation and transmission investments are large and long-term with equipment expected to operate for many decades. The regulatory approach must ensure continued long-term investment in the face of risk. As a world financial centre, HK cannot bear the risk on low power supply reliability. Therefore, the existing rate of return should be kept.

Regards,
Spencer

SPL comment on HK electricity market v2 (2).doc

To : Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong
e-mail: electricitycommentstage2@edlb.gov.hk

Date: 30th March 2006

Re: Hong Kong' s electricity market after 2008

Dear Secretary,

Our company, SPL WorldGroup, is a global company providing Strategic Utility Management (SUM) solution for electricity companies worldwide. We have many different customers in the US, Australia, Asia and Europe. Some of them operate in a regulated electricity market, while others operate in a de-regulated market.

As a company who specialize in the electricity market and who has been operating in Hong Kong for many years, we would like to express our opinion on the captioned topic.

In response to your Bureau' s stage II public consultation on the future development of the electricity market in Hong Kong, here are some of our comments.

- a. The objective of the Government' s energy policy is to ensure that the public can enjoy reliable, safe and efficient energy supplies at reasonable prices, and to minimise the environmental impact caused by the production and use of energy. We believe this is a clear objective and the Hong Kong public will benefit in the long run.
- b. On the topic of new supply sources, we suggest that the government need to study the environmental impact for importing electricity from the Mainland before opening up the market. China' s electricity market is in a different phase of market development than the one in Hong Kong. A lot of the capital investment is diverted to expanding production capacity for which demand had been on a rising trend. Environmental regulation is different from the one imposed by the Hong Kong Government. By importing electricity from China, Hong Kong is actually shifting production capacity and environmental responsibility to the Mainland. If strict environmental policy is not implemented to monitor these production facilities, Hong Kong might eventually suffer in the long run.
- c. We believe the government should study carefully on the impact of opening up the grid and the distribution system for third party access. In the US, a lot of the electricity companies have implemented SCADA systems, Outage Management Systems and Distribution Management Systems; they can do

SPL WorldGroup Hong Kong Office
Room 1401, SBI Centre
54-58 Des Voeux Road, Central Hong Kong
Tel: + 852 3195-0793 Fax: + 852 3195-0790
www.splwg.com

simulation and analysis on the performance of the grid and distribution network in terms of service availability and outage management. We encourage the Hong Kong Government to study the benefit of these systems before opening up the grid and distribution system.

- d. On the issue of performance improvement, we support penalties being imposed based on service quality. Our experience in other electricity markets show that a good IT system can be helpful in monitoring the performance of an electricity company. This could be as simple as issuing a correct customer bill after meter read or dispatching a qualified service technician to an outage area within a short period of time. We suggest a visit to other electricity markets could help evaluate the benefit of these IT systems in terms of monitoring the performance of electricity companies.
- e. Although the details are arguable, SPL supports the Government's policy in encouraging the electricity companies to invest in Emission Reduction Facilities. This is also a trend that we have been seeing around the world, governments in different countries are implementing different scheme to encourage the electricity companies to invest and research on environmental friendly ways of producing electricity. In the long run, this will be beneficial to the Hong Kong public.
- f. Another way of reducing emission is by smoothing out the peak demand of electricity duration high consumption periods. Interval Billing (Time of Use pricing) is a topic of discussion by a number governments around the world. In an electricity market, production capacity is planned based on peak demand. By imposing Interval Billing, customers actually become more efficient in their electricity consumption, which directly reduce excess capacity indirectly reduce emission.

Thank you for your consideration.

Best Regards,
SPL WorldGroup Hong Kong Ltd.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

26/03/2006 23:34

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Dear Sir,

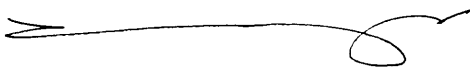

Comments on Stage II Consultation on
Future Development of the Electricity Market in Hong Kong

We understand that the HKSAR Government is consulting the public on future development of the electricity market in Hong Kong. As a major financial institution operating in Hong Kong, and a good corporate citizen, we would like to provide our views on this important subject:

1. Hong Kong is a major international financial centre in the world. It is of paramount importance to our economy that we have safe and reliable power supply. If our dealing rooms, bank counters and ATM machines cannot operate due to electricity failure, the price the community has to pay and the damages caused to Hong Kong's reputation as a major international financial centre will be very high. Hong Kong enjoys a reliable and uninterrupted electricity supply and any major change to the existing system that may negatively impact this reliability should be carefully considered.
2. Electricity infrastructure investment is a capital intensive and long term investment. Therefore, power companies should be allowed to make a level of shareholders' return that commensurate with the risks and horizons of their investment in Hong Kong.
3. Reliable and safe electricity supply no doubt comes with a cost. It is essential that the electricity tariff structure is a transparent and reasonable one for the public.
4. The need to protect our natural environment is becoming increasingly important. We expect the Hong Kong SAR Government will agree a set of stringent yet achievable environmental control measures with the power companies. Such measures should balance the need for additional investment, improved environment and reasonable cost to the community as a whole.

We hope that you will take our views into consideration on this important subject.

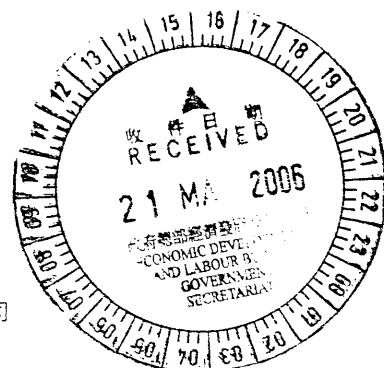

Yours sincerely,

Grace Fung Oei

Electricity Market in Hong Kong
☐ Urgent ☐ Return Receipt

I would like to submit the attached file regarding the captioned subject.

Stanley Chan

Submission for Stage II Consultation for Future Development of Electricity Market in Hong Kong.doc

**Submission for Stage II Consultation for
Future Development of Electricity Market in Hong Kong**

I am one of the employees in Hong Kong Electric (HEC) and would like to express my following views:

1. Reliable electricity supply is my first consideration for an electricity company. It is extremely important for Hong Kong which is now focusing on the service sector. Being a customer, everyone would like to have a cheaper electricity supply. However, bear in mind that unreasonable return would affect the investment environment especially on long-term electricity market and hence lead to decrease on electricity reliability in future.
2. Reasonable return shall be calculated based on the following factors: Cost of capital, Cost for environmental protection, Investment risk premium etc.
 - i. Cost of capital: Refer to 10-year term HKMA EFBN, the yield rate on 14/3/2006 is around 4.5%.
 - ii. Cost for environmental protection: The cost shall be calculated based on the requirements imposed by the government of HKSAR. In this connection, it is not reasonable to just compare the electricity price between Hong Kong and PRC.
 - iii. Investment risk premium: Power industry is a very long-term investment. This factor shall be assessed with reference to the previous investment risk premium in Hong Kong stock market for the past 10 to 20 years.

Based on the above, I think the currently proposed permitted return rate of 7% is unreasonable.

3. Due to the large investment on power industry, the proposed shortening of agreement period from 15 years to 10 years is unreasonable.
4. No one would deny that exhaust gas is produced resulting from electricity generation in power plants. However, the present root cause of air pollution in Hong Kong is due to the cross-boundary pollution. From my observation, Hong Kong is misted in most of the winter time. Would our government please discuss with Guangdong's government in order to minimize the air pollution problem.

Subject: deregulation

☐ Urgent

☐ Return Receipt

Dear Sirs / Madams,

I am a HK residence for over 10 years, previously resided in Canada. The electricity in HK is very reliable yet at a very good price as compared with Canada. My family are very satisfied with the existing pricing structure and services. If you go for de-regulation and bring in open competition, all competitors may only work on to maximize their profits but reluctant to make long-term and reliable investment because those power infrastructure, eg. power stations & substations, are very costly investment. The de-regulation in USA illustrates big problem in reliability, and the competition does not bring in cheaper supplies either.

Since HK is such a small place, it has limited market for costly infrastructure investment, open competition may not be good to HK. Pls think seriously about the de-regulation. I would rather HK gov't keeps the regulation agreement but try the best to negotiate for reasonable tariff and environmental protection.

Subject: Future Development of the Electricity Supply

☐ Urgent ☐ Return Receipt

Dear Sirs,

I have been living and working in Hong Kong Island for more than 50 years. I think that the existing power supply is reliable and stable, and I am much satisfied with the performance of the existing enterprise.

Regarding the future development of the electricity supply, I suggest to remain unchanged after 2008 upon expiry of the franchise. I am much worried that the power supply would become a mess when a new company enters into the market. This may disturb the social life of Hong Kong people and ruin the image of Hong Kong.

Of course, the government should have a checking mechanism to control the price level of the electricity so that both the end-users and the supplier can come to a win-win situation.

We sincerely hope that you may take them into your consideration.

Thanks and regards,
Stanley Lee

Subject: Re: Future Development of the Electricity Market in Hong Kong –
Stage II Public Consultation 香港電力市場未來的發展 – 第二階段公
眾諮詢

☐ Urgent ☐ Return Receipt

本人對電力市場發展第二階段公眾諮詢文件有以下意見：

一、 希望政府採取積極的態度，營造一個良好的氣氛與兩電磋商期望達成相
贏
的協議，為民生謀福利。反對政府將諮詢事宜政治化為協商增添障礙。

二、 原有的利潤管制協議源用多年，而從過往的數據中，証實了有問題發
生，理應以此作為藍本稍作修改，繼續源用。

三、 政府與兩電增持不下的投資回報百分比，應該由適當的專業人仕、兩電
及
政府代表來釐訂，務求另營商者及市民釐訂一個雙方都能接受的回報率。

四、 政府提出的四種不同類別的資產採用不同的投資回報率，似乎過於複雜
及
增加營運成本。

五、 政府所建議的十年限制年期用於大型基建的投資項目是有欠公允。

Future Development of The Electricity Market in Hong Kong

Dear Sir,

Referring to your consultation paper on the above subject, I would like to provide my comments as follows:-

1. Different Returns On Different Assets

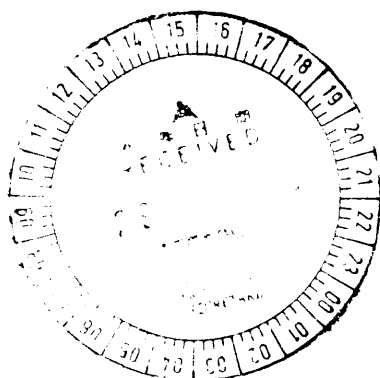

The consultation paper proposed to adopt a different rate of return on different asset types. It is a complicated means to create multiple tiers for the rate of returns on different asset types. It is more simple and easy to administrate with a single rate of return for all asset types. If the costs of raising capital for different assets are the same, the returns should be the same.

2. Rate of Return

The consultation paper also proposed to reduce the rate of return to 7-11% in the post-2008 regulatory regime. Under the rising interest rate as well as the anticipated inflation in Hong Kong, your proposed rate of return 7-11% is not enough to attract continuous investment to maintain a reliable power supply. To attract continuous investment, the regulatory period should set at 15 years.

I would like to take this opportunity to urge the government to provide sufficient incentive for maintaining electricity supply reliability in the post-2008 regulatory regime.

Yours faithfully,

Stanley Tso

Subject: 香港電力市場未來的發展 第二階段諮詢文件

☐ Urgent ☐ Return Receipt

敬啟者：

就香港電力市場未來的發展第二階段諮詢文件，本人有以下意見：

引入新競爭者

政府常提出引入新競爭者，對消費者有好處。但卻少向市民提及其潛在壞處。

首先，容許有多少的新競爭者，會給與甚麼地方作為新的電廠的選址？這些選址，會否就在我們的住址附近？這些新電廠的廢氣排放，對附近民居的影響有多大？這些問題，直接影響民生，但政府卻隻字不提。

其次，政府對新競爭者的財政狀況，如何監管？從諮詢文件中，似乎很少提及這方面的要求。如果數年後，這些新競爭者因經營不善而倒閉，所帶來的問題，包括損失的發電能力，可否其他公司補上，多餘的電力從業員，安排怎樣？可否由其他電廠吸納？

現時政府對兩間電力公司的監管，基本上是沒大問題，但當引入多個新競爭者時，政府是否有能力駕御他們呢？就以交通為例，當小巴要求加價時，跟著便是的士、小輪、地鐵、九鐵，到時候，政府又可以控制嗎？

況且不是每種行業都可以開放，就以香港的警察，若引入競爭，表面上可能會減低治安的開支，但勢必帶來其他的問題，如賄賂等。所以，要維持優等的服務質素，要有社會及承擔，這些都是需要代價的。電力供應亦是，要有穩定和可靠的電力供應，都是需要代價的。引入競爭，只會帶來其他的問題，未必會市民帶來好處。

在第二階段諮詢文件第2.20中提到『...此外，增強或改動電網、提供後備電源及保養電力系統，都需要成本，故必須避免要用戶承擔這方面不必要的開支。』須知道電力公司不是慈善機構，他們都是生意人。又要馬兒好，又要馬不吃草，這是不切實際的希望。反問政府，可否加強社會服務之餘，又要改善福利、教育、醫療，到最後還可寬減稅收嗎？這明顯是個不公平、不合理的要求。

環境保護

在第二階段諮詢文件第2.32 (a)

中提到『...盡量避免由用戶承擔達致減排目標的費用；』

減排裝置是需要成本的，更必需投入資源，才能使它運作，但政府卻建議對減排建設，提供一個最低的投資回報率。這個建議，跟政府一向予人全力支持環保的形象，完全相反。以往，從政府對石油氣的士的政策和購買新車減稅優惠等，都顯示政府支持有關經營者或使用者的，並在金錢上得到鼓勵。但偏偏對電力市場經營者，採取背道而馳的態度。對排污裝置的回報率，竟然是最低的。枉論政府應提供誘因給電力市場經營者，建設更多的排污裝置，保護環境。相對低廉的電費，亦缺乏令市民有節省用電的意慾。

所以我認為開放電力市場對市民沒有肯定的好處，反而會為政府帶來監管上的困難。在環境保護方面，應鼓勵電力市場經營者建設有效的排污裝置以減少對環境的傷害，並容許有最高的回報率。相對提高的電費，由消費者去承擔，類似『污者自付』的原則，市民自然產生節省用電的意慾，最後環境污染情況，自然會得到進一步的改善。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

01/04/2006 01:40

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

I am very concerned about the air pollution caused by the power stations. I strongly urge you to apply additional controls in air pollution due to the power generation, under the future electricity market. I am participating in Green Peace's e-mail alert and agree with their suggestions:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up.

I strongly believe it is in Hong Kong's social and economic interest to pro-actively and aggressively reverse the current trend in deteriorating air quality. Hong Kong is by far the best city to live in greater China and truly a great world city, but the deteriorating air quality and neglectful behaviour of government in regard to this issue is not something to be proud of.

Yours sincerely,

Stefan White

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution.

The Hong Kong government needs to implement strict environmental protection measures and effectively control emission from power stations in Hong Kong.

The government should also liaise with their counterparts in the PRC with an aim to reduce the impact on the environment due to rapid economic development in the Pearl River Delta.

Bring back the blue sky and give us a breath of clean and fresh air.

I look forward to hearing from you.

Yours sincerely,

27 March 2006

Economic Development & Labour Bureau
2/F., Central Government Offices
Main & East Wings,
Lower Albert Road, Central
Hong Kong

Dear Mr. Secretary,

Stage II Consultation on Electricity Market Development

I have the following comments on the electricity market Stage II consultation paper from the perspective of investors:

1. Shorter agreement period

Shorter the agreement period means less certainty and higher risk of getting sufficient return after the expiry of agreement. As a result, higher rate of return is required to cover the higher risk.

2. Rates of Return

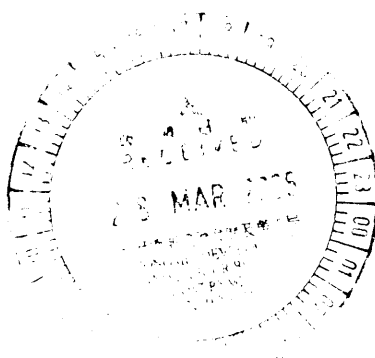

The proposed lowered permitted rate of return is not attractive when compared with the prevailing interest rate and the rate of return from other investment options like stock market. Such a low rate of return can hardly attract investment in electricity infrastructure. The situation will be much worse when considering lower rate of return with the shorter agreement period. The investors will be exposed to higher risk but rewarded with less return.

Based on the above, I am not convinced that the proposal will get sufficient investment in electricity infrastructure in future, and thus, I really worry that the present supply reliability cannot be maintained in future.

I request the Government not to proceed with the above proposal such that the present supply reliability can be maintained in future.

Yours sincerely,

Stella Cheng

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Comments on Stage II Consultation

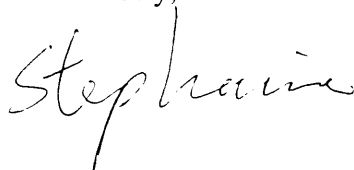

Dear Sir,

I like to comment on your Stage II Consultation proposals.

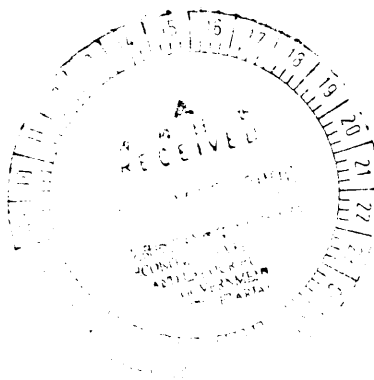

Firstly, I support your policy objectives, as Hong Kong people rely too much on reliable supply than any where in the world because we all live and work in high-rise buildings.

However, please be careful about setting the rate of return. If you do not provide adequate incentive to investors, they may not invest and Hong Kong's electricity infrastructure may have problem, like many places in the world with the electricity market deregulated but unable to attract investment and thus suffering from blackouts.

Yours faithfully,

A handwritten signature in cursive script, appearing to read 'Stephanie'.

Dear Sir,

Stage II Public Consultation
on Hong Kong Future Electricity Market

Please find below my comments to your captioned consultation:

In my opinion, the proposed different rates of return for the power companies, all of which in the range of 7% - 11%, are insufficient to attract continuous investment needed for the electricity infrastructure in Hong Kong. Firstly, no reason has been given in the Consultation Paper as to how the range of rates of return has been derived. Secondly, the setting of different rates for different assets does not only complicate the calculation but also increase administrative costs for all parties.

Moreover, for the healthy growth of the electricity supply industry in Hong Kong, I think it is imperative to provide a reasonable and fair return to the power companies to ensure that the quality of services and the reliability of electricity supply would not be affected after 2008.

Yours sincerely,

Stephanie So

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；

2. 可再生能源的投資可享有較高的准許回報率；

3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；

4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；

6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。
懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Comments on Electricity Consultation Paper
☐ Urgent ☐ Return Receipt

Dear Sir,

In response to the Government's Consultation Paper on the electricity market regulation after 2008, I would like to submit my comments to the Government's proposal (see the attached file: Stage2_HKG).

This is a research paper that I recently wrote in relation to the market reform of the Hong Kong electricity market. I do hope that it can shed some lights on how the market can be regulated more efficiently after the current contract expires in 2008.

If you require more information, please feel free to contact me.

Kind regards,

Dr. Stephen Luk
Assistant Professor

Viewpoint

**A further assessment of the Hong Kong Government's proposed post-2008
regulatory regime for local electricity utilities**

Stephen Luk
School of Accounting and Finance
Hong Kong Polytechnic University
Hung Hom, Hong Kong

Abstract

The current regulatory contract between the Hong Kong Government and the two local power suppliers will expire in 2008. To elicit constructive ways to refine this regulatory contract upon its expiration in two years, the Hong Kong Government recently issued a public consultation paper. An earlier viewpoint by Woo, Horowitz and Tishler (2006) warns that if the proposals provided in this consultation paper are fully adopted, it will do more harm than benefiting the industry. While its concern is valid, that viewpoint has not suggested specific improvements of the existing arrangement. Hence, this viewpoint contributes to Hong Kong electricity policy debate by filling this gap, with the hope of aiding the regulator to better regulate the market in the years after the current contract's expiration.

Keywords: Electricity market; Industry regulation; Hong Kong.

1. Introduction

In December 2005, the Hong Kong Government issued a “Consultation Paper on Future Development of the Electricity Markets in Hong Kong: Stage II Consultation,” (EDLB, 2005a), which presumably is the result of the many suggestions made to the Stage I consultation paper (EDLB, 2005b). The Stage II Consultation Paper aims to solicit constructive ideas and opinions on how the local electricity supply industry should be regulated after 2008, when the current regulatory contract with the local power suppliers expires. In a forthcoming viewpoint, Woo, et al. (2006) assess the Government’s proposal using the criteria of safe, reliable, and environmentally-friendly service at the just and reasonable rates that enable the utilities to make a fair return on their investments. That viewpoint concludes that if the proposals in the Stage II Consultation Paper are fully adopted, it may lead to costly reliability deterioration, without any compensating benefits to the environment.

Despite all the well thought-out arguments, Woo et al. (2006) have not provided constructive recommendations on how the proposals can be refined. Nor have they offered specific remedies to the current less-than-ideal regulatory contract. In this viewpoint, I contribute to the Hong Kong electricity policy debate by clarifying some of the points discussed in Woo et al. (2006) and proposing possible step that will hopefully help achieve the overarching policy goal of safe, reliable and clean service at just and reasonable rates.

2. Background

The electricity supply industry in Hong Kong is dominated by two regional monopolies, and its regulation, the Scheme of Control Agreement (SCA) has not seen any major overhaul since its implementation in 1964. Much had been said about the SCA with regards to its drawbacks and how it may be improved (Lam, 1999, 2004; Chan, 2005; Luk, 2005; Ngan et al, 2005). With the 2008 expiration date of the current contract drawing near, the Government is now actively seeking ideas on how the SCA can be improved in order to achieve tariff reduction without sacrificing the industry's outstanding supply reliability.

A number of recommendations are proposed in the Stage II Consultation Paper, among which four are deemed problematic by Woo et al. (2006), namely: (1) the excess capacity mechanism used for a rate-base calculation; (2) the rate-of-return (ROR) linkage provision intended to achieve emission reductions; (3) allowing varying returns by asset type; and (4) lowering the utilities' allowable rates of return to the 7% to 11% range from the current 13.5% to 15% range.

Woo et al. (2006) provide detail explanations on the causes of these problems and their potential adverse effects on the market. As such, it seems that suggestions put forth by the Hong Kong Government could do more harm than fixing the pitfalls of the current SCA. On the whole, I concur with Woo et al (2006) who have forcefully affirmed that a major overhaul of the SCA is inappropriate. Their conclusion notwithstanding, there are rooms for improvement in the current SCA, so as to ensure that future tariffs can be kept at a reasonable and affordable level, while maintaining sufficient incentives for the

utilities to continue their reliable and adequate supply of electricity, as well as possible improvements in emission standard.

3. Possible Alternative

The very first step to better regulate the market after the current phase of SCA expires requires a clear distinction between “return of investment” and “return on investment”.

Return of investment in a regulatory contract context stipulates that the power suppliers can recover their capital outlay via depreciation charges in the tariffs; while return on investment is the earnings that the power companies can make with their invested capital. Power industry investments are typically large, long-term, immobile, and have very little, if at all, alternative use. In order to entice the utilities to willingly make long-term investment, it is necessary for the Government to ensure 100% return of their invested capital.

According to the power company (CLP, 2006), when taking project lead time into consideration, invested capital typically cannot be fully recovered under 7 to 8 years. Hence, a ten-year regulatory period may not be sufficient for the utilities to fully recover their returns of investment. And it follows that a sensible contract period that allows for full recovery of return of investment should be longer than the proposed ten-year time frame.

However, within the relatively long contract period, the regulator should review and refine the SCA on a more frequent basis so as to ensure that the terms and conditions outlined in the contract are fair and fit the prevailing economic conditions. The allowed

rate of return on investment should be set in the spirit of ensuring a reasonable and fair return to the utilities. After the allowed rate is determined, a utility's actual profit will then be decided by the overall performance of the utility in response to changing market conditions (e.g., sales and costs). The utility may make a seemingly large profit when compared to other firms, especially at times of recession. But so long as the utility's profit is made in accordance to the allowed rate of return regulation, after-the-fact regulatory taking via drastic tariff reduction is inappropriate.

Under the current arrangement, the two power companies are allowed to earn a maximum of 13.5% and 15% on debt and equity capital. Whether these numbers are justifiable and reasonable has a lot to do with the prevailing economic conditions and value judgment. In the Consultation Paper, the Government calls for a reduction of this rate of return (ROR) down to the 7% to 11% range. However, with possible market entry without franchise protection or stranded-cost recovery, Woo et al pointed out that the proposed 7-11% ROR range does not represent a "fair and reasonable return" for the power companies and their shareholders, and they believe that this ROR should be set at a higher than suggested level.

While the argument in Woo et al. (2006) has some merit, it still cannot address the crux of the problem. Economic conditions are highly uncertain and volatile, and no range of ROR will ever be "fair and reasonable" for an extended period of time. Even with a ROR range that is above 7-11%, the profit regulated firms are allowed to earn may still considered as unattractive during periods of high inflation. As such, it is more important for the regulator to review the ROR more frequently than simply focusing on finding a "fair" ROR range that can become "unfair" due to unexpected changes. By

updating the level of ROR on a regular basis, every 3 to 5 years for instance, the regulator and regulated firm can adjust the rates either upward or downward to better fit the overall economic conditions, ensuring that profits earned during the period being fair and reasonable.

The process of adjustment of the ROR can take the form of a rate hearing process as currently used in the U.S.. This brings transparency to the whole process in which the regulator, regulated firms and the public can all have their cases presented and discussed. Advantages of this arrangement include the provision of an open forum for all interested parties to voice their opinions and concerns, pre-empting accusation of the present black-box operation. Also, open dialogue between all stakeholders can eliminate various ambiguities, and facilitate agreement on a rational solution for all.

To summarize, allowing the regulated firm to fully recover their long-term capital investments while frequently review the ROR is a possible path to a mutually acceptable solution for all parties. To the regulator, the arrangement ensures that utilities will continue to make long-term capital investment and provide reliable electricity to end-users. And for regulated firms, regulatory transparency and consistency in ROR updating will ensure that their allowable profits are fair and reasonable in light of the prevailing economic conditions. Finally, because the ROR can be adjusted upwards or downwards, electricity consumers will see tariff revisions that aim to achieve just and reasonable rates.

4. Conclusion

Few will argue that the existing SCA is perfect and does not need refinements. The important question to the regulator is how to strike a balance between reliable electricity supply and allowing the regulated firms to earn a fair and reasonable return. Understanding the difference between the return of investment and return on investment is a first step to crystallize a very key issue in revising the current SCA. With a relatively long regulatory contract period but more frequent revision of the ROR, mutually beneficial improvements can be achieved for all parties. This is a small step the Government can easily do, a feasible option that is imminently safer than a dramatic overhaul by fully adopting the Consultation Paper's proposals.

Subject: We want clean air!
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

I could not agree more with the below, it is downright disgusting what we as citizens of HK are expected to breathe day in and day out. It has gone too far, there is no excuse for the developing chinese economy at the cost of millions of citizens in Asia and their quality of life. We deserve better. Even nuclear is a better option than what we have...

Bring us cleaner air!!!!

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

stephen moore

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

29 March 2006

**Personal views of Government's Consultation Paper on the Future
Development of the Electricity Market in Hong Kong- Stage II Consultation**

Having read thoroughly the Consultation Paper issued by the Government Official, Being a senior citizen of Hong Kong, have seen many advance technology investments by the Power Companies, continuous improvements and system developments has served the City very well in the past that had marked by the public, it strangers me that the Government still has the intention to propose and welcome new players to this market. Such proposal, theoretically it would not be a bad idea on some ways, but practically it might face some unpredictable difficulties and might not be able to proceed smoothly.

I am a Lighting Engineer, am working with a British Lighting Company as a Representative and is currently stationed in Hong Kong for sales and marketing liaisons. Although I don't have much knowledge about Power Generation and it's key elements for reliable power supply, but I wish to take chance to express my personal views on such Paper: -

1. From the day when I grown up, I have seen stability of power supplies that had brighten the city became World known. Such a good performance result that the existing Power Companies should give a Credit and thanks for their effective power generation and skillful management that are operating.
2. With attractive privileges to be provided to the new comers, but on the other hand, set down many restrictions to the existing Power Companies, such as, profit return, duration of the agreement, environmental controls, etc. Consumers would be a bit of worry in the future; they might not worry for increases of electricity fees but worry not able to enjoy the same stability services of electricity supplies.
3. In particularly, when the Government laid down the rate of return for the Power Companies, simultaneously, ask for acceptable performance linkup, large expenditures for improvement are not avoided and performance pledge from the Power Companies would not be escaped. Under such arrangement, the victims are the Consumers that they might have to suffer high rates on the electricity bills and shareholders get less return due to such pledge.
4. At the moment, we are proud of the Power Companies that serves clean and efficiency supplies, with the Government's intention to amend the existing Policy or Rules; certain grades of hidden worry from the public would not be eliminated.
5. With the reasons stipulated above, I would suggest the Government to re-consider deeply of the amendment of Power Supplies Policy to avoid any significantly increase regulatory risk. Chinese proverb says: To play skillfully but result clumsy and lost is more than you got. With my above reflections, I strongly disagree the Government to plan for change of Electricity Policy.

Subject: Air pollution...this is not a standard reply

☐ Urgent

☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

Furthermore I believe that taxes should be very substantially increased for large cars to discourage weight and large engines. And **I mean 4-5 times the current** purchase and road tax. It should be really expensive to run a gas guzzler. Conversely for small cars or cars with energy recycling the tax should be substantially reduced. It should be a no brainer as to what type of car to buy.....

I recommend:

1. that there is a program to help people reduce their energy demands in their lives. Simple things like using fans instead of air-conditioning

2 That Much Higher standards of insulation for buildings are introduced. Secondary roofs to shade primary roofs should be allowed with no increase in plot ratio

3 That we follow China's policy for birth control as this eventually is the solution to all environmental problems. **There are too many of us**

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities **can be** transferred to consumers;

WE SHOULD ALL CONTRIBUTE AND MAKE IT CLEAR TO THE POWER COMPANIES THAT WE ARE SERIOUS ABOUT GETTING THIS DONE. THERE SHOULD BE NO EXCUSE

2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;

3. An investment in renewable energy should earn an even higher level of permitted rate of return;

4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;

5. The targets and time-table for reduction of coal burning should be set;

6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind and solar energy development.

7. Demand management must be built into the profits of the company. There must be a mechanism where they profit if they can significantly reduce energy demand. At present they only profit from increased demand.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

Subject: opinion on the Proposal in Stage II Consultation

☐ Urgent ☐ Return Receipt

Dear sir/ madam,

I am writing to express my opinion on the Proposal in Stage II Consultation. Concerning the "Permitted Return" Item suggested by the government that there would be 100% penalty on excess capacity, I strongly disagree about that for the following reasons:

- 1) The existing penalty mechanism is in fact working well in preventing over-expansion of assets
- 2) This discourages investments which are needed for adequate electricity supply, affecting the reliability of our electricity supply
- 3) It is also unfair to penalize power companies for any investment that has been approved by the government

I hope the government can deeply consider this matter before making decisions.

! Yours faithfully,
Steve Lam

2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!
☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Steve Reynolds

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Regarding consultation on Electricity Power Generation

☐ Urgent ☐ Return Receipt

I urge the Government to realize that reducing air pollution should receive the highest priority, because pollution is having a very significant negative impact on the health of HK people and the quality of life they enjoy.

Therefore, I suggest that the Government require HK power generating utilities to adopt the least polluting methods of electricity generation as rapidly as possible. Too much dirty coal is being burned; other less polluting methods should be used as soon as possible. The cost of pollution is too high for the current system of power generation to continue.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

27/03/2006 16:20

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

Subject: Regarding electricity power generation public consultation, I urge the HK Government to focus on Pollution Reduction as the highest priority.

☐ Urgent ☐ Return Receipt

To whom it may concern,

I am glad that the HK Government is inviting public consultation on electricity generation.

I view air pollution as one of the greatest problems facing HK.

It poses enormous threats to the health of HK's people and is already significantly diminishing the quality of life in HK.

It also hurts the economy in many ways. Many visitors to HK that I have met view HK's air pollution very negatively.

As a result, I urge the Government to act and require HK's electricity generation sector to

1) Stop burning coal and switch over to cleaner alternative fuels such as LNG as quickly as possible; longer-term, I urge increased usage of environmentally friendlier generation methods such as wind-power as rapidly as possible

2) Stop generating power which is not needed in HK which is supplied supplied to China. This generates significant additional pollution.

3) Install as many pollution reducing devices, such as scrubbers, etc. immediately.

I think it is in HK's interests to recognize the many hidden or ignored costs of pollution and act as rapidly as possible, given the significant impact pollution is already having on the lives of HK's citizens.

Regards,

Steven Li

Hong Kong

Dear Sir,

As revealed in Stage I Consultation, it is the public's consensus that the supply reliability is of paramount for Hong Kong. Such importance is fully recognized by the Government in the setting of its policy objective. However, after reading the Consultation Paper, some proposals are in fact contradictory to the above objective.

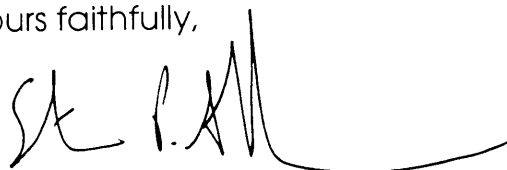

1. Lower rate of return from 13.5% to 7-11% with applying varying return rates to different asset types

The proposed range of returns seems too low as compared to the current level. There is a high probability that it will disincentivize investors of power companies to continue their investment, which in turns will jeopardize the supply reliability in the long run. In addition, it may be illogical to set different return rates for different assets given that the costs of raising capital for the different assets are the same in the free market.

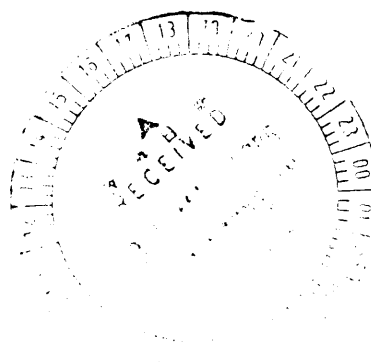

2. Shorten regulatory period to 10 years

Given that the electricity industry is capital-intensive with long payback period, a sufficiently long regulatory framework is necessary to protect investors from risks. The current 15-year regulatory period is more adequate and should be retained.

Yours faithfully,

Steven P. Allen

My Comments on Stage II Consultation

Dear Sir,

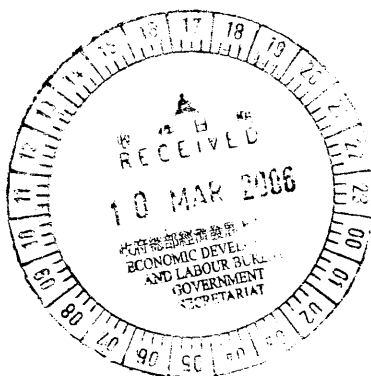

I refer to your Stage II proposals for the electricity market after 2008. In general most proposals are quite good, but the time period is too short as it gives investors a lot of uncertainties 10 years later. I think investors need stable regulation rather than unknown regulation.

I also worry about your proposal to open the market after 2018, with the hope that Hong Kong can be supplied by the Mainland. Such proposals have two weaknesses, viz., (1) your bureau cannot control the Mainland on quality and reliability of supply, and (2) power companies will not invest in the next 10 years as they don't know whether their investment can earn a return or not 10 years later.

Yours faithfully,

Steven SMITHERS

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a resident in Hong Kong, I am very much concerned about the quality of air in Hong Kong. I frequently entertain overseas visitors and all have been dismayed by the appalling air pollution in Hong Kong. Even visitors from mainland China have been heard to make adverse comments on it. This affects the health of all in Hong Kong (particularly the young) and will ultimately affect tourism and other financial aspects (including higher health costs). I would respectfully urge the government to urgently enhance environmental control over air pollution, particularly pollution induced by power generation. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. RE should be supported, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. The SAR government should set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. Encourage the power generation companies and heavy industries to control the emission of pollutants, through installation of sulphur scrubbers and other appropriate filters.

I cordially request the SAR government to bring us back the blue sky and a breath of clean air.

Thank you.

Subject: 香港電力市場的未來發展
☐ Urgent ☐ Return Receipt

敬啟者，

本人並不贊同在現時開放電力市場,茲因:

1.) 是電力可靠穩定重要或電費廉價重要？

香港之今日可以成為一個世界馳名的金融中心及旅遊勝地，除了各階層共存共榮外，穩定可靠的儀器及設施(如電力)，都是成功的因素之一。而電力，在民生上亦存著不可或缺的角色。究竟電力市場開放後，質素會否提高或降低，電費會否大幅加減，穩定可靠程度能否維持，都是一個疑問。亦都是一個沒有肯定的答案。

電力市-始終與零售或電訊市-不一般，在香港這寸金呎土，人煙稠密的小島實在難以容許數間供電商存在，因供電網絡難以斬碎式般供應給零散用戶，相對地，若多間供電商競爭下，或會先以廉價及合約捆綁式爭取客戶，爭取市場佔有率。但在商言商，一分錢一分貨下，所提供的物料，員工質素，服務甚至供電可靠性或會教人失望。

縱觀電訊市場的開放，無異給予大眾更多的選擇，較廉價的消費，但各電訊商服務及質素參差不齊，無論固網或手電，有那一座大廈可提供數個網絡給用家選擇，又有那一間可提供全港覆套的服務，此無他，所有投資者皆著眼在跟政府的合約期內，付出有限度投資，以換取豐厚盈餘。但供電商我可以選擇嗎？是否到時間竭停電乃正常，供電商引用收入不足而狂加附加費用我得啞忍呢？

2. 長遠發展？

若本港政府有心開放電力市-，城市規劃應早加準備，新供電商的電網如何鋪置，或跟現有兩大供電公司租用網絡，這些至今未見政府有何草擬或綱要。有時路過或見街道上或大或小的地盤，地底下盡是形形式式的水管，電纜，膠管道，煤氣喉等等擠在一起，新電網的鋪排我想政府得慎重考慮一下，尤其自電訊開放後，更多見其形形式式的管道鋪設中，地底下究竟可再容納多少公用設施呢？

談到兩電聯網問題，我也看不出政府如何與兩大供電機構商妥，事前準備功夫令人未免有點兒戲。在祖國缺電下依然提擬兩電向祖國有關發電機構買電，減少成平，果真夠創意！

究竟我們的政府是有心開放電力市-，抑或只是順從各大小議黨及壓力團體的民意！！來迫使兩電放棄專營權，甚至違背公平貿易。但今次電力市-一旦攞垮了，帶來的影響，可與現在民怨沸騰的教改(母語短暫教學，大學四轉三再三轉四，中小學接龍-龍，殺校 等等)相

One more thing : I find it laughable that the Government is taking radical steps by attempting to ban smoking in pubs, bars and restaurants, when the breathable air outside such places is far worse. The SAR Government likes to take a moral high ground in such matters of people's health caused by evil smokers, but is weak when it comes to achieving a reduction of air pollution that sweeps down from Southern China.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Stuart Wang

I am an expat who has been living in Hong Kong for 10 years. During this time I have lived in Discovery Bay and watched the quality of air deteriorate very quickly. Although we are permanent residents and are planning to stay in Hong Kong for the long term, if the air quality continues to deteriorate at this rate we will be forced to leave, as our children are beginning to develop breathing difficulties such as asthma. Hong Kong is a wonderfully diverse place to be, it is a shame that people are beginning to avoid this place because of the pollution. Please help to turn our skies blue again by setting appropriate controls for the power plants.

2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

24/03/2006 12:33

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Electricity Market Stage II Consultation

☐ Urgent ☐ Return Receipt

31/03/2006 23:22

Please respond to spypooh

Dear Sirs/Madams,

We are writing to express our views on the Power Market Stage II Consultation.

CLP has been providing reliable electricity to HK for the past 100 years. Reliability is critical to maintaining Hong Kong's leading position as Asia's world city. The system is working well and should be kept. We understand that the public is concerned the return is too high. For a company/investors to take on such long term risk, it should be compensated accordingly. As a shareholder of CLP's stocks, return rates lower than 10% is absolutely unreasonable.

On the subject of who should bear the costs of the environmental control facilities, we are of the opinion that as citizens of Hong Kong, we should all bear the costs together. After all, we are the reasons behind the power generation. Both the power companies and the citizens should share the costs.

However, as residents of HK islands, we resent the fact that we have to pay a higher tariff. We urge the government to resolve the price differentials. We should be paying the same price as the others. We should enjoy equal rights as citizens of Hong Kong.

We hope the government put the welfare of the Hong Kong people above politics. Electricity is critical to the continued upkeep of HK's competitiveness.

Regards

Suen Yiu Sin and Wong Pui Yu

Residents of Hong Kong Island and CLP's shareholder.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

27 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices, Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Mr. Ip,

Electricity Market Development in Hong Kong
Stage II Consultation

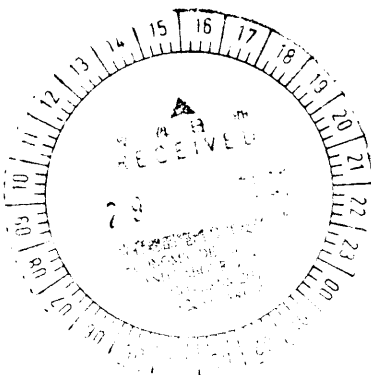

Your effort in preparing this consultation paper is very much appreciated. Electricity supply service in Hong Kong is good and I satisfy with the current level of electricity supply reliability.

I agree with the Government that reliability of electricity supply is very important and the policy objective should focus on maintaining reliability. But, some proposed changes in the consultation paper such as permitted rate of return reduction and shortening of the regulatory period will have significant impact on the reliability of electricity supply. I am afraid that the reduced financial incentive to the power companies and much tightened regulatory requirements might lead to insufficient investment in electricity infrastructure, and might thus affect supply reliability.

I suggest the Government to evaluate the proposals in the consultation paper with caution, so that Hong Kong will continue to have an adequate electricity supply.

Yours sincerely,

Suki Chan

Subject: Stage 2 Consultation on the Future Development of the Electricity Market in HK

☐ Urgent ☐ Return Receipt

I have personal views on the Stage 2 Consultation paper as follows:

1. The Consultation Paper does not clearly define the 'Energy Policy' on the issues such as fuel mix for the generation of electricity in Hong Kong. HKE uses mainly coal as fuel while CLPP uses a diversified mix of fuels that combine with coal, natural gas & nuclear power for generation of electricity.

2. A balanced fuel mix is critical for supply reliability. Well developed countries in the world will not rely on a single fuel type for power generation.

3. As the natural gas is the clean fuel for power generation, CLPP should be supported and encouraged to use more natural gas for the power generation to improve the air quality.

4. Government should set clear 'Energy Policy' on the related issues for the better future of the Electricity Market in Hong Kong.

I love HK, having being born and raised here, but am seriously considering moving out of here as I have 2 children who deserve to be able to breathe fresh, clean air. We never left after SARS, would not leave because of the threat of bird flu but, I cannot in all good conscience, allow my children to ruin their lungs and their health because our government WILL NOT clean up the air that they breathe. Do something concrete and do something fast, please.

Main & East Wings, Lower Albert Road, Central, Hong Kong

Dear Sirs

Stage II Consultation on Future Development of the Electricity Market in Hong Kong –
Comments

Our regional office has been operating in Hong Kong for more than 20 years since 1980s. We are very impressed with the reliability of the local power supply, which is one of the essential factors for Hong Kong to become an international financial centre. We understand the purpose of the captioned consultation is to echo the general public's appeal for open competition and eventually lowering the electricity tariff. However, we consider the present electricity tariffs in Hong Kong are at a reasonable level when considering the local living standard, overall operating cost of our office and high reliability of power supply. To be more specific, we have the following comments on the Stage II Consultation Paper:

1. Regulatory system and period
 - 1.1 We support the continuation of the Bilateral Agreement between the Government and the Power companies because of the proven effectiveness of the system in the past.
 - 1.2 We consider the shortening of the present 15-year SCA period to 10 years with a 5 year extension option has no benefit to Hong Kong as it has not taken into account the long term investment cycle and fuel supply contracts in the power supply industry.
 - 1.3 We do not support the proposed Government approval for tariff adjustments without clear conditions for approval as it is another bad example of Government interference in the operation of private companies
2. Permitted Return based on average net fixed asset (ANFA)

We support the proposal because it is a common practice in the industry and simple for the utility, the government and general public to operate / monitor.

3. 4-tier Rate of Return (ROR) applied to different asset types

We consider the proposal is irrational and unfair to the investors because:

- 3.1 The returns for different assets should be the same and pegged to their costs of raising capital.
- 3.2 ROR should have no direct relationship with emission cap target achievement but rather with the cost of raising capital and risks.
- 3.3 Although it is not clear how the government established the 7-11% ROR, it is immature to set these figures for the 10-15 years from 2009 just based on the current inflation rate and market conditions.
- 3.4 The same ROR should be given to Renewable Energy and emissions reduction facilities, as both are environmental protection measures.
- 3.5 Lower ROR than the present 13.5% may deter the power companies' investment leading to insufficient new facilities and system reinforcement / maintenance and deterioration of the supply reliability which we have been enjoying in the last few decades.

4 New Supply from the Mainland

- 4.1 We do not consider the proposal feasible, as the power supply in Guangdong and South China will be very tight still in the coming 10 years.
- 4.2 We cannot see any small scale power supply near the border will be beneficial to Hong Kong at large except introducing threats of frequent power interruption to the users of the New supplier.
- 4.3 The switching of customers to the new supplier will unavoidably resulting in a lift of tariff by the existing power companies to compensate for the loss of customers as it would not be possible for them to downsize their system equipment and investment selectively.
- 4.4 It will not be possible to ask the two existing power companies to have long-term planning and to bear the responsibility in ensuring adequate and reliable supply for the whole territory.

5. Third party grid access

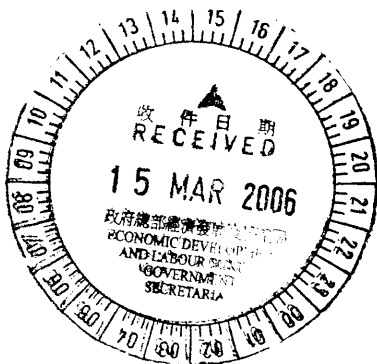

We strongly object the proposal because

- There would not be enough market players for fair competition
- It would endanger the supply reliability in Hong Kong
- The need of establishing complicated wheeling charge structure and a regulating body whose operating costs would have to be borne by the end-users/tax-payers.

Yours faithfully,

Takeo Osada

Dear Sirs,

Re: Future Development of the Electricity Market in Hong Kong

I am writing as a member of the business community to express my view on the future development of the electricity market in Hong Kong as follows:-

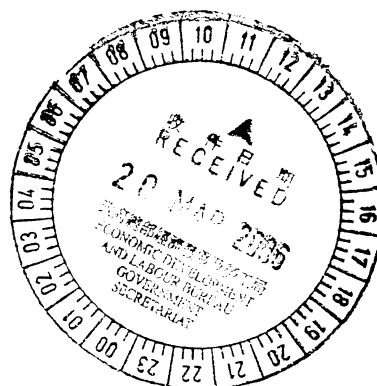

- a) Reliability is the most important and success factor in the business world. Any change of the system that may have an adverse effect on the supply reliability should not be encouraged.
- b) Unlike others, power generating facility should consider to be a long term investment. Without satisfactory return, no one is willing to invest and to build a quality and reliable system. In other words, a longer regulatory period with sufficient return can encourage power companies to put in more capital.
- c) The valuable lessons that we learned from US in the past should not be repeated in Hong Kong.

I would like to ask your serious consideration to keep the current system as much as possible. This was in effect one of the major factors that was contributable to the success of Hong Kong.

Thank you for your attention.

With best regards,

Hideo Hiyama

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Dear Mr Ip,

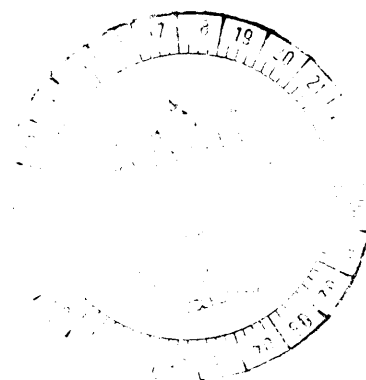

Re : Stage II Consultation Paper

I don't have too much technical background to comment on technical issues listed in the consultation paper. I just concern if there will be a dramatic change in the future electricity market that will result in a significant fluctuation in tariff and deterioration of supply reliability in the long run. If so, all the proposals or promises made by you or the politicians now are meaningless. If the current scheme has been well proven to be effective, why not we keep it continue after 2008? Why do we bother to have different returns for different assets, shorten regulatory period, etc.? Just keep the terms of the current SCA unchanged and rule out any possibility for the interference from the politicians on business operation.

Yours,

Dear Sir,

Stage 2 Electricity Market Consultation

I am writing to express my idea of the future development of the Hong Kong electricity market. I notice that while you propose to maintain the arrangement of having bilateral agreement between the Government and the power companies, you also propose to shorten the agreement period from 15 years to 10 years.

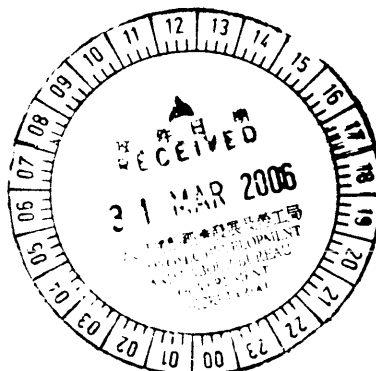

Under the Government's clear intention to introduce competition to the electricity market in future, this arrangement constitutes plausible risk to stable and reliable electricity supply. I cannot imagine that, under such a clear and credible threat to their businesses, the power companies will be willing to invest to provide quality service.

In order to alleviate the problem and maintain the quality service provided by the power companies, I request you to keep the agreement period at 15 years and maintain a close and robust working relationship with the power companies.

Yours truly,

Sung Man Hei

**Stage II Consultation Paper On Future Development
Of The Electricity Market In Hong Kong**

Dear Sir,

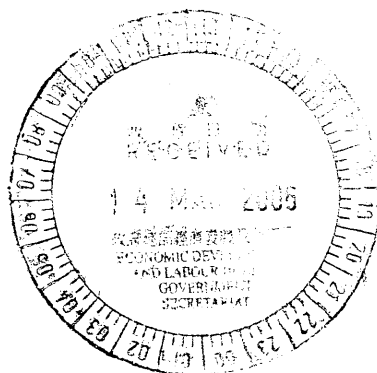

In response to Stage II Consultation Paper, I would like to express my views on your proposal of rate of return (ROR) linking to emission cap target achievement for your consideration.

I do not support your proposal of the rate of return (ROR) linked to emission cap target achievement in the Stage II Consultation Paper based on the following reasons:-

- (a) Relating the achievement of the emission caps of the power companies to the ROR is very unreasonable. It is because the ROR should be only related directly to the various risks incurred and the cost of raising the capital.
- (b) The two power companies in Hong Kong have already been subject to penalty when they cannot meet the emission caps under the existing Air Pollution Control Ordinance.
- (c) If ROR is linked to emission cap target achievement, it will discourage investment because there will be additional risks incurred.
- (d) There is no clear picture of the post-2008 regulatory framework for the power companies to plan for their long-term investment. It will be very unfair to impose penalty on ROR if the emission caps target cannot be met.
- (e) The interests between the investors and the consumers do not balanced properly by this proposal.

Yours faithfully,

Joanny

☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Response to Consultation Paper on Future Development of the
Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To The Economic Development and Labour Bureau,

I am extremely concerned about the air pollution caused by Hong Kong's power stations. I am a Hong Kong citizen for over 25 years but along with so many others, every day have to think about how much longer I or my health can stand it.

The government must take positive steps to improve its control of the electricity market, so as to restrict the massive pollution created by power generation. Back in the early 1990s I attended lectures by CLP talking about their green credentials and control of fuel emissions. These have in practice proved to be so much hot air and negligible progress over 15 years towards alternative and subsidiary generation systems, almost certainly because talk is cheap and good publicity, but implementation means money. They have no incentive to do anything constructive.

The control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities.

1. The permitted rate of return of power companies should be linked to the total emission caps set under the power companies' licences. If they cannot achieve the caps then the rate of return should be reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE other than incineration generating greenhouse gases;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. It is imperative the SAR government at last takes steps to set up meaningful and clear energy saving targets;
5. An Energy Administration should be established to coordinate the planning of the electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. The power companies should be effectively discouraged from setting up or joining in polluting power generation systems elsewhere in China; this all comes back to Hong Kong. They should be encouraged to take the lead in providing technology and investment for cleaner and contemporary RE generation systems that the world now needs.

It is time the SAR government became a real government, and bring us back the blue sky and a breath of clean air, that we remember from not too long ago. Just look at the old postcards...

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Susan Collins

☐ Urgent

☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect and promote Hong Kong society.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction and elimination of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

7. Demand management must be built into the profits of the company. There must be a mechanism where they profit if they can significantly reduce energy demand. At present they only profit from Increased demand.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Susan Mifsud

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Stage II Consultation
☐ Urgent ☐ Return Receipt

Dear Sirs,

I live in Sydney, Australia. My family migrated here from Hong Kong eleven years ago but make frequent visits back to Hong Kong.

I strongly believe in the value of renewable energy and I am concerned that the measures proposed in the Stage II Consultation papers will not provide the right incentives for, and indeed may discourage future investments in renewable energy.

First, from the perspective of renewable energy providers, the proposed open grid access regime is an unsatisfactory means of distributing electricity to consumers. How can prospective energy providers be expected to make huge investments in new technology when the means of delivery is controlled by the electricity companies who are, in one sense, their competitors? To what extent will the terms of access be regulated and how will these balance the needs of the consumers for safety and reliability with the commercial imperatives of the energy provider and the electricity companies? In my opinion, these are mutually defeating objectives. It appears that the better and quicker way for renewable energy to take hold in Hong Kong is to encourage the electricity companies to develop the technology themselves rather than to pit alternative energy providers against each other.

Secondly, the focus on deregulation and price reductions undermines the whole idea of developing renewable energy. Developing renewable energy is a long-term mission which cannot be achieved when the focus is purely on price competition. It requires government assistance and public support -support which may come in the form of higher prices but will benefit the health and wellbeing of generations to come. And lest we get ahead of ourselves, let us not forget that electricity prices in Hong Kong are very affordable when compared to other countries.

Speaking more generally and quite apart from renewable energy concerns, Hong Kong is a uniquely small city with huge electricity demands and I cannot imagine how a deregulated electricity market would be in the best interests of Hong Kong residents. Hong Kong is not a city which has geographically disparate communities; there are no issues related to supply to remote rural areas. There are no opportunities or reasons for differentiation and I would venture to say that it would be counter-productive to introduce new entrants into the market simply for the sake of price competition.

In my experience, the supply of electricity in Hong Kong is reliable and affordable. It would be unwise to introduce deregulatory reforms if only for the sake of price competition. It would also be contrary to the cause of developing and promoting renewable energy. For these reasons, I hope that the government would reconsider the proposed reforms.

Yours sincerely,
Susan Wan

Subject: 網上行動回應《香港電力市場未來的發展》

☐ Urgent ☐ Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: 香港電力市場未來的發展第二階段諮詢

☐ Urgent ☐ Return Receipt

本人支持政府就上述諮詢的政策目標是：「確保能夠以合理價格，得到可靠、安全及環保的電力供應」。但本人認為規管年期不宜過短，因電力行業回本期長，資產壽命長達20-30年以上，而國際燃料供應通常簽訂20年的採購合約，因此應繼續給予15年協議年期，令電費得以保持穩定，最終市民同受惠。再者，本人認為必須將回報率定在合理水平，以確保有足夠的投資，以維持可靠的電力供應系統。

最後，本人認為諮詢文件中的建議須兼顧各方長遠利益，並在市民的電費負擔、穩定可靠及安全的電力供應、合理的投資回報等各方面取得平衡，使香港未來電力市場有更長遠健康的發展，以支持香港社會高速的發展、長期的穩定和繁榮。

謝謝！

5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Stage 2 Consultation - Future Electricity Market

☐ Urgent ☐ Return Receipt

Duration of the Agreement

The proposed shortening of the regime to 10 years plus a five-year extension at the option of the government is a major adjustment from the current 15-year term with huge mismatch with the lifespan of power assets. ! The infrastructure projects have longer concession periods with 3 to 7 years for the period from conceptual design to construction completion, leaving little time to yield the investment return. The power industry is in line with other infrastructure projects such as the Daya Bay nuclear plant with a concession period of 20 years. As a result, the investors will not invest in any new power assets since they can achieve a higher return over 10 years at less risk by simply buying US treasury bonds. Furthermore, a 10-year concession would pose severe problems in securing fuel supply as typical contract durations are likely to be 20 years or more arrangements.

!

Excessive Generating Capacity

I read from the newspaper to le! am some of the academia want to revise the official definition of excessive generating capacity by making it -§mean + 2 standard deviations-- or -§102% of peak load demand--, whichever is lower. Their analytical skills are beyond doubt but they need to understand the power industry more.

Two major factors need to be considered: the size of one generator unit relative to the system size and the time taken to complete the construc! tion of the generator units. To gain the economy of scale, a modern generator unit is larger than 600MW, which is about 10% of the peak load demand of CLP Power and 20% of that of HEC. The construction time taken from the drawing board to commissioning of the generator units is 7 years minimum. Allowing 3% growth in electricity consumption per annum, an allowance of 21% must be made on top of the N-1 planning criteria, i.e. one generator unit has been taken out of service. This is obviously over simplified as the growth rate of electricity consumption is not easy to estimate. If the excessive generating capacity is squeezed to a very low level, the chance to have inadequate power or black-out over a large supply area will increase.

Return Rate

The r! eturn rate in the current and proposed regime is guaranteed maximum and it is not a guaranteed minimum. Lowering the return rate will lower the guaranteed maximum. Many politicians want to reduce the return rate to 5 to 8% leading to a tariff reduction. They like to see stronger government intervention such as the establishment of a dedicated energy bureau to keep the power

utilities to walk on their toes. They want deregulation and ask the utilities to open their grids and pursue interconnection with Guangdong in the long run. They woo their popularity by making noise to please the public without making any effort to understand more on the subject.

Those politicians should ask the Government to expand the energy bureau to take over the management of electricity business for the purpose of achieving 0% return and a bigger tariff reduction. It will also facilitate the opening of the grids and establishing interconnection with Guangdong.

Fortunately there are politicians wise enough to point out a reasonable return could incentivise the power companies to invest and interconnection with Guangdong was unrealistic for the time being in view of the province's power shortages. Leaving the electricity business to the invisible hand of -market- with minimum intervention from the Government is the best option. I believe we can pay a lower water bill if WSD can be privatized too.

Deregulation

Deregulation is a very complicated process and it needs a road map greater than 10 years to implement. It is difficult to reverse once it is started. Based on what has been implemented in countries outside Hong Kong, the tariffs have gone up but the reliability has gone the other way round after deregulation. Among the tariff increases, the residential customers will suffer the most as they do not have the bargaining power to go else where.

Suzanne

27 March 2006

Economic Development & Labour Bureau
2/F., Central Government Offices
Main & East Wings,
Lower Albert Road, Central
Hong Kong

Dear Sir,

Views on electricity market development

I am writing to express my views on electricity market development (Stage II Consultation) as follows.

➤ *New Energy Authority*

I do not see there is any need to form a new energy authority as I cannot find any major problems in the present electricity industry regulation. The setup of such an energy authority will not only increase Government's spending but also increase bureaucracy.

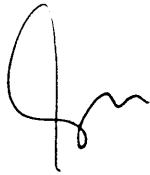

➤ *Different Rates for Different Assets*

I also consider it is not necessary to have different rates of return for different assets as all types of assets are installed and owned by the same power company. The different rates system will complicate the return determination process and waste more Government's and power companies' resources, which in turn decrease the overall industry efficiency.

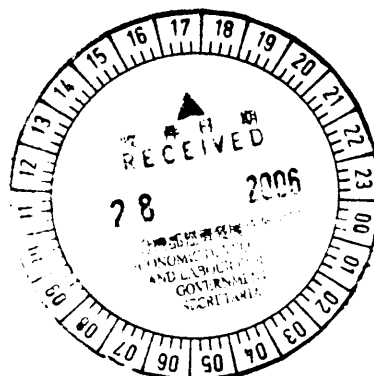

I would therefore request the bureau to withdraw the above proposals.

Please count my views in determining the future development of electricity market.

Yours faithfully,

Suzanne Cheng

I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Future Development of the Electricity Market in Hong Kong Stage II Consultation

☐ Urgent ☐ Return Receipt

Future Development of the Electricity Market in Hong Kong
Stage II Consultation

Dear Sir,

I am an electrical engineer of a contracting company in Hong Kong. Referring to the above captioned subject, I have some ideas as follows:

- 1) I think that the contract period to be 10 years is too short for the long term investment such as power plant. To be fair to the investors, it is not suitable to cut the period. It will decrease the attractiveness of investment. The investor will not try to make long term planning for their power plant any more. 15 years or 20 years of contract should be more reasonable for the better planning of power plant with more reliable and stable system.
- 2) Because of a large investment required for power plant, only high annual return can attract investor to pay more to develop their company. I think that 15% of annual return is applicable. If the profit is cut too low, the management will cut employees and contract out more their works to contractors to maintain their existing profit. Many social problems will come due to the low employment rate, long working hours, bad customer service, low payment of contractors and even no payment when the contractors closed down etc....
- 3) I don't agree to fix different return rates on different types of assets because it is too compliable to identify what the rate is suitable for what type of the assets. Also the investor will concentrate to invest more to the assets with higher return. It will cause unknown problems and lead to unhealthy development of the power plant!
- 4) For the air pollution, it is also not fair to punish the energy producer (Power Company) only. The end users who use the electricity should also have the responsibility to pay for the environment protection. I have strong support to protect our environment, but it is more realistic to provide extra resource or economic attractive factor to promote the investor to have interest to plan their project (power plant) in a direction of protecting environment. But not only make punishment to cut their profit or to cut down their development. It is a double lose situation!

Best regard,
SW Poon

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 - 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: From a voter: Clean air is vital to Hong Kong's Competitive Advantage

☐ Urgent ☐ Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations.

Hong Kong's competitive advantage lies with a healthy image as a preferred place to live and work.

I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. Emissions should be reduced to take advantage of carbon-emission quota trading as set forth in the Kyoto Protocol;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
3. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
4. The investment in renewable energy should earn a higher level of permitted rate of return;
5. The targets and time-table of reduction in coal burning should be set;
6. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
7. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

If I and fellow professionals and families are to remain living in Hong Kong, the SAR government must bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Sylvester

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Response on Consultation Paper on Future Development of the
Electricity Market in Hong Kong (Stage II Consultation)

☐ Urgent ☐ Return Receipt

Dear Sir/Madam,

Attached please find my submission of "Consultation Paper on Future
Development of the Electricity Market in Hong Kong (Stage II
Consultation)" Thanks for your attention.

Regards,
SZE Chung Tak

consultation.doc

23 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Sirs,

Comment on the Consultation Paper on Future Development of Electricity
Market in Hong Kong

In response to the Consultation Paper issued regarding the Stage II consultation of post-2008 SCA arrangement, I would like to contribute my comments and opinions as follows.

Upon reviewing the proposed post-2008 regulatory regime in your Consultation Paper, I would consider Hong Kong to be far too risky to adopt such a contract, which might lead us away from the policy objectives of ensuring reliable, safe and efficient energy supplies at reasonable prices.

Market Competition

Market deregulation is a complex process requires long term and detailed planning. While on one hand there is no short-term plan to setup mechanisms and authorities to oversee market operations, on the other hand the proposal expressed its willingness to introduce new competitors. Such competitions introduced without any proper transition plans would expose all stakeholders, including the Government, investors and even the consumers at risk in various aspects. The result would be a dramatic decrease in the incentive of capital investment on long-lived generation and transmission equipments. Furthermore, the uncertain demand to be served due to new supply source from competitors would make fuel procurement difficult for power companies, which would lead to a high fuel rate with shorter period of fuel contract. These are adverse effects in maintaining the supply reliability in long term. The Government would eventually need to rectify the disorder with costly effort.

A more comprehensive and realistic study should be carried out to assess the feasibility and impact of deregulating the local electricity market, before allowing entry of any new market players. I expect the actual benefit to be too insignificant relative to the cost that we have to bear, as according to many problematic deregulated markets elsewhere in the world.

Environmental Regulations

The Paper proposed to tighten the emission caps on major pollutants produced by power plants to improve the environmental performance of power companies. I concur with the general perspective, however, could not see policies supporting and favoring the realization of these wishes.

Hong Kong enjoys an extremely reliable supply of electricity at a fairly constant and affordable price. It is necessary for the authority to recognize

the importance of different kind of fuel within the fuel mix in keeping up the security of supply. Emission standards should be set with regard to the technical limitations and supply security, but not solely aim to achieve unrealistic environmental performance. For instance, it is an internationally recognized fact that coal generation would continue to be an essential element to maintain supply reliability at acceptable cost. Moreover, under the substantially tightened emission standards and the penalties would be imposed by the Government, power companies would be encouraged to reduce the operation of coal generation units to avoid the uncertain penalties set by the Government, which in turn decreased the supply. As the emission reduction facilities installed to the coal generation units would be entitled to an even lower rate of return after significant cut in Permitted Rate of Return, the power companies would have less incentive to install emission control facilities and tend to replace the supply by higher cost gas-fired units whenever possible.

Without clear and consistent environmental and energy policy to direct the development of the energy market, it is anticipated that the supply security would eventually be affected and the cost involved would be a great burden to the general public.

Rate of Return

The proposed Permitted Rate of Return at 7% -11% would be of a major obstacle for achieving the objective stated in your paper, which is to ensure adequate and quality infrastructure to provide reliable and safe supply of electricity.

Taking into account of the huge investments required for infrastructures, relatively long project lead time and fuel contract commitments to meet various standards set by the Government, the risk involved at the perspective of the investors are significant and deterring. Beside, there would be notably increment in risk introduced by reducing the duration of next regime to 10 years. All these would limit the capital injected into the power companies.

Together with other changes recommended in your Paper which are with no reference to specific or clear policy, the intangible risk accumulated would be far more significant than the few percent of return reduced, which might originally spent to keep up the safety and reliability of the supply.

It is expected that, if adopting the proposal in your Paper, uncertainties and risks in various aspects would be introduced to the market by the unclear, abrupt and missing policies on numerous issues, which deem to be critical in long-term operation and development of an electricity market. Therefore, I urge you to cautiously review again your proposal which might significantly reduce the incentives of investment on equipments crucial in maintaining supply reliability.

Regards,
SZE Chung Tak

Hong Kong.

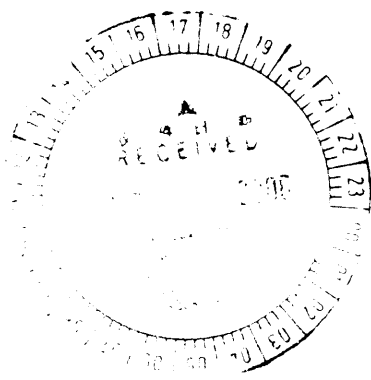

Dear Mr. Stephen Ip,

Future Development of the Electricity Market in Hong Kong

I am writing in response to your Consultation on the future development of the electricity market in Hong Kong.

I simply cannot see why the Government has to complicate the already complicated negotiation with the power companies by suggesting different rates of return for different asset classes. Don't you have sufficient issues at hand to take care of? Why can't the uniform rate of return, as has been the case for the past Scheme of Control Agreements, be used instead of the multiple rates? The most important issue right now is to reach with the two power companies a reasonable and fair rate of return to their investors so that the prevailing level of electricity supply reliability can be maintained.

I hope you can consider not only my view but also those of the two electricity companies when you plan for the future development of the electricity market.

Yours sincerely,

Sze Tuk Cheong

Subject: 我要清新空氣
☐ Urgent ☐ Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

☐ Urgent ☐ Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.
